INTRODUCTION TO THE 2021 GUIDELINES

The 2021 BJCP Style Guidelines are a minor revision to the 2015 edition, itself a major update of the 2008 edition. The goals of the 2015 edition were to better address world beer styles as found in their local markets, keep pace with emerging craft beer market trends, describe historical beers now finding a following, better describe the sensory characteristics of modern brewing ingredients, take advantage of new research and references, and help competition organizers better manage the complexity of their events. These goals have not changed in the 2021 edition.

In 2015, many styles were added, some styles were divided into multiple categories, and some simply renamed. Styles are organized into categories following a philosophy that groups styles with similar judging characteristics rather than a common heritage or family name. Do not assume that the same primary characteristic (e.g., color, strength, balance, dominant flavor, country of origin) was used to determine each category grouping – the reasoning was more nuanced.

If you are familiar with the 2015 guidelines, we have made a few name changes and some styles have moved from provisional, historical, or local styles into the main guidelines. We intentionally tried to keep style moves, style additions, and numbering changes to a minimum.

Styles and Categories

The BJCP Style Guidelines use some specific terms with specialized meanings: *Category*, *Subcategory*, and *Style*. When thinking of beer, mead, and cider styles, the subcategory is the most important label – *subcategory* means essentially the same thing as *style* and identifies the major characteristics of one type of beer, mead, or cider. Each style has a well-defined description that is the basic tool used during judging.

When specialty beer descriptions refer to a *Classic Style*, we mean a *named style (or subcategory name) in the BJCP Style Guidelines* prior to the Specialty-Type Beer styles section.

The larger *categories* are arbitrary groupings of beer, mead, or cider styles, usually with similar sensory characteristics. Subcategories are not necessarily related to each other within the same category. The purpose of the category structure is to group styles of beer, mead, and cider to facilitate judging during competitions. Do not attempt to derive additional meaning from these groupings – no historical or geographic association is implied or intended.

Competitions may create their own *award categories* that are distinct from the *style categories* in these guidelines.

There is no requirement that competitions use style categories as award categories! Individual styles can be grouped in any manner to create desired award categories in competition; for instance, to evenly distribute the number of entries in each award category.

While style categories are more useful for judging purposes since they group beers with similar sensory characteristics, we recognize this may not be the best way to learn about beer styles. For educational purposes, the styles may be grouped into style families so they may be compared and contrasted. Beers may also be grouped by country of origin to better understand the history of beer in a country, or to learn about a local market. Any of these groupings is perfectly acceptable; the styles have only been grouped as they are to facilitate competition judging. See Appendix A for alternative groupings of styles.

Naming of Styles and Categories

We chose names and titles to best represent the styles and groupings in our categorization system. Don't let these names interfere with your understanding the actual style descriptions – that is the main point of the BJCP Style Guidelines. We are not telling breweries what they should call their products. We are only providing names that can be used for easy reference.

We realize that many of our defined styles can have alternate names, or are called different things in other (or even the same) parts of the world. In the past, we used multiple names in style titles to avoid showing preference, but this too often led people to incorrectly use all those names simultaneously. So, we selected one unambiguous name for each style.

We added a country or region of origin to some style titles in order to differentiate between styles using a common name (such as Porter). The titles we selected are intended to be both unique and descriptive, but are not necessarily what the products are called in local markets. We are not implying any special ownership or standing based on the names we selected, and we apologize for any unintentional political, ethnic, or social offenses.

Some names we use are protected appellations or trademarks. We are not saying that these should not be respected, or that commercial breweries can use these names. Rather, these are the most appropriate names to use when discussing the styles. If this concept is hard to understand, just assume there is an implied “-style” designation on every style name. We didn't want to use “-style” in our naming scheme since these are style guidelines, and of course everything is a style.

Using the Style Guidelines

When we published previous versions of the style guidelines, we had no idea how prevalent and pervasive they would become. We believed we were creating a standardized set of style descriptions for use in homebrew competitions, but then found they were widely adopted

worldwide to describe beer in general. Many countries with emerging craft beer markets are now using them as handbooks for what to brew. Consumers and trade groups began using the styles to describe their products. And unfortunately, many made astounding leaps of logic well beyond our original intent, and subsequently used the guidelines as a sort of universal Rosetta Stone for beer.

While we understand that our guidelines may have been misused in contexts beyond our original intent, we've also observed them being misused in competitions and for other BJCP purposes such as exam preparation and grading. Some people misinterpret the guidelines, and then often unknowingly instruct others in their misuse. Our hope is that the information in this section will help prevent many cases of misinterpretation and misuse in the future. If anyone encounters someone using the guidelines incorrectly, please refer them to this section.

The following maxims express our original intent, and are designed to limit misuse, not to prevent the guidelines from being adopted for new uses:

1. **The BJCP Style Guidelines are *guidelines* not *specifications*.** Take those words at face value, or their plain meaning. Guidelines are meant to describe general characteristics of the most common examples, and serve as an aid for judging; they are not meant to be rigorously-applied specifications that are used to punish slightly unusual examples. They are suggestions, not hard limits. Allow for some flexibility in judging so that well-crafted examples can be rewarded. The guidelines are written in detail to facilitate the process of the structured evaluation of beer as practiced in homebrewing competitions; don't use each individual statement in style descriptions as a reason to disqualify a beer.
2. **The Style Guidelines are written primarily for homebrew competitions.** Individual style descriptions are written primarily to aid in judging. We have, in some cases, sought to define clear lines between styles to create non-overlapping judging categories. We understand that some styles may overlap in the market, and some commercial examples may straddle boundaries. We have organized style categories for the purpose of organizing homebrew competitions, not for describing and communicating the styles of the world to a different audience.
3. **We know many people use our guidelines.** We understand that other organizations or groups are using our guidelines for purposes well beyond our original intent. To the extent that those groups find value in our work, we are happy to have our guidelines used. We freely allow our naming and numbering system to be used by others. However, don't make rash assumptions about the nature of beer and beer styles based on applications of the guidelines beyond their original intent. We also know some craft brewers are using our guidelines to rediscover historical styles, or to brew styles not native to their country – we are thrilled to be able to help advance craft beer in this way. Just remember that it's not our original mission to do this; it's just a happy side-effect.
4. **Styles change over time.** Beer styles change over the years, and some styles are open to interpretation and debate. Simply because a style *name* hasn't changed over the years, doesn't mean that *the beers themselves* haven't also changed. Commercial brewers subject to government regulation and market forces definitely change their products over time. For example, because there is now a beer known as *porter* doesn't mean that it has always been made that way throughout its history. Our beer styles are generally meant to describe modern beers currently available, unless otherwise specified (e.g., in the Historical Beer category).
5. **Not every commercial beer fits our styles.** Don't assume that every beer fits neatly into one of our categories. Some breweries revel in creating examples that don't match our (or anyone else's) guidelines. Some create beer called by a style name that deliberately doesn't match our guidelines. It's perfectly fine for a commercial beer to not match one of our styles; we have not attempted to categorize every commercial beer – that is neither our intent nor our mission.
6. **We have not defined every possible beer style.** *Of course* we know of beer styles that aren't defined in our guidelines. Perhaps they are obscure or unpopular, homebrewers aren't making the styles, insufficient examples or research material exists to adequately define them to our standards, or they are from a part of the world we haven't visited extensively. Maybe they are historical styles no longer made, or that we believe the styles are a passing fad. Regardless of our reasons, don't believe that our guidelines represent the complete categorization of every beer style ever made – they aren't. They do, however, describe the beers most commonly made today by homebrewers and many craft breweries.
7. **Commercial examples change over time.** Just like beer styles change, individual examples change as well. A beer that was once a great example of a style might not always remain so. Sometimes the beer changes (with ownership change, perhaps) or sometimes the style trend changes but the beer doesn't. For example, Anchor Liberty helped define the American IPA style when it was created, but it seems much more like typical American Pale Ales today.
8. **Ingredients change over time.** Hops are a good example today; new varieties are coming to market with unique characteristics. Brewers looking for a

differentiator may be rapidly adopting (and abandoning) ingredients. It is difficult to say that the profile of a beer style is fixed when its typical ingredients are changing constantly. Allow for these changes when judging beer. For example, not all American hops will be citrusy or piney. Don't be rigid about judging based on what was commonly used at the time of this writing; understand what ingredients are typically used, and adapt judging to match the evolving character.

9. **Most styles are fairly broad.** Some believe that our styles inhibit brewer creativity by rigidly setting boundaries. That is not our intent – we think creativity drives innovation, and that interpretation by brewers should be allowed. However, not every innovation is a good idea, or results in a beer that is recognizable in the same grouping of others with the same name. Therefore, styles should be interpreted as having some flexibility, but within reason.
10. **The Style Guidelines are not the Ten Commandments.** The words in this document are not due to divine inspiration – they were written by people making a good faith effort to describe beer as it is perceived. Don't treat them as some kind of Holy Scripture. Don't get so lost in parsing individual words that you lose sight of the overall intent. The most important part of any style is the overall balance and impression; that is, that the beer reminds you of the style, and is a nicely drinkable product. To get lost in the individual descriptions loses the essence of the style. The mere fact that style descriptions can change from one edition of the guidelines to the next should be the clearest illustration that the words themselves are not sacred.
11. **Our Guidelines are extensible.** We understand that our guidelines will change in the future, and that there may be years between revision cycles. The BJCP's primary mission is to conduct exams, and if the references changed constantly, it would make studying nearly impossible. So, we have adopted a compromise: we have Provisional Styles listed on our website that can be used in the same way as styles in these guidelines. This allows us to add changes between editions. We also have a list of Style Entry Suggestions on our website to help understand where best to enter styles not defined in the guidelines or as a Provisional Style. These features, as well as the extensibility of some styles such as Specialty IPA and Historical Beer, allow brewer-defined styles to be used in competitions. Combined, these three features allow the guidelines to evolve between major updates.
12. **We are not the beer police.** We categorize and describe beer styles that we see exist, and that are used. In no way are we telling commercial brewers what they can brew, or saying that they are wrong if their products don't fit our guidelines. We also do

not create styles in the hopes that they will become popular. The state of the overall beer market in any given country is not our concern.

13. **Different formats exist.** Our guidelines appear in many third-party locations, on multiple mobile platforms, and are translated into other languages. Unfortunately, not all these versions contain the full text of our guidelines, or are completely accurate translations. Be careful when using a format supplied by someone other than the BJCP; when in doubt, always refer to the original source.
14. **The BJCP does not run competitions.** Sometimes competitions use entry software that limits comments, or otherwise makes it difficult to comply with Entry Instructions in the guidelines. Report problems to competition organizers and to the software suppliers. Our intent is that all allowable information requested by the guidelines be supplied by brewers, be accepted by competitions, and be furnished to judges.

Format of a Style Description

We use a standard format for describing beer styles. The sections within this template have specific meanings that should be understood so as not to be misused:

- **Overall Impression.** This section describes the essence of the style – those points that distinguish it from other styles, and that make it unique. It can also be thought of as an expanded consumer-level description useful for describing and differentiating the style to someone who isn't a beer geek or judge. This section also acknowledges the many uses outside judging, and allows others to describe a beer simply without using the detail needed by judges.
- **Appearance, Aroma, Flavor, Mouthfeel.** These four sections are the basic sensory building blocks defining the style, and are the standards against which a beer is judged in competition. These sections focus on the sensory perceptions derived from the ingredients, not the ingredients or process themselves. For example, saying that a Munich Helles tastes like continental Pils malt is a great shorthand for what is perceived; except, of course, if you have no idea what continental Pils malt actually tastes like. Our guidelines are written so that a trained judge who has not tasted examples of a given style can do a credible job judging it using the structured evaluation method and using our guidelines as a reference.
- **Comments.** This section contains interesting trivia or additional notes about a style that do not affect the sensory assessment. Not every style has extensive comments; some are quite simple.
- **History.** The BJCP is not a historical research organization. We rely on available information,

often revising our summaries as new facts are published. Our histories are abridged summaries of some of the more important points of style development; please do not take these notes as the entire, complete history of styles.

- **Characteristic Ingredients.** We identify typical or common ingredients or processes that drive the distinguishing character of the style. Please do not treat these notes as recipes, or as requirements. Beer can be made in many different ways.
- **Style Comparison.** Since some might better understand an unfamiliar style if it could be described in terms of other known styles, we have provided notes on the key points that distinguish a style from similar or related styles. Not every possible style comparison is listed.
- **Entry Instructions.** This section identifies the required information necessary for judges to evaluate a competition entry. This information should always be provided by the entrant, accepted by competition software, and provided to judges. Entrants should be able to supply optional comments about their entries, subject to review by competition organizers.
- **Vital Statistics.** The general characteristics of the style, expressed in Original Gravity (OG), Final Gravity (FG), Alcohol-by-Volume (ABV), International Bittering Units (IBUs), and Color as expressed in the Standard Reference Method (SRM) from the American Society of Brewing Chemists (ASBC).

For those outside the United States that use the European Brewing Convention (EBC) color method, note that an EBC value is roughly double the equivalent SRM value. For those familiar with the Lovibond system, Lovibond is roughly equivalent to SRM for colors that exist in all but the darkest beers. For the purists out there, we're talking about what is distinguishable to a judge using their eyes, not chemists using analytical equipment in a laboratory setting.

Some style categories include multiple styles that represent a continuum, such as British Bitter or Scottish Ale. When we provide a dividing line between these styles, we typically use a single number to represent the upper bound of one style and the lower bound of the next. This does not imply that a beer with that borderline stat (e.g., ABV or OG) should be entered in both styles. No overlap is intended. In these cases, treat the upper bound as “ending just before” and the lower bound as “starting at” the listed numbers.

Keep in mind that these Vital Statistics are still guidelines, not absolutes. Commercial outliers certainly exist, but these statistics are meant to describe where most examples are clustered. They

help judges determine judging order, not whether an example should be disqualified.

- **Commercial Examples.** We include a selection of current commercial examples that we believe are representative of the style at the time of publication. We may publish additional examples on the BJCP website in the future. We cannot guarantee that breweries will continue to make these examples, that the names will stay the same, that the recipes won't change, or that they will be available at your local bottle shop. Some are rotating, seasonal, pub-only, or otherwise difficult to find outside festivals, competitions, or local markets.

Do not assign any additional meaning to the order of examples within the guidelines. Do not assume that every commercial example would score perfectly when evaluated against the style descriptions. Simply because a commercial example is listed as a reference for a style does not mean that every example is going to be world-class. Some beers can be mishandled, and some examples change over time.

Do not use commercial examples as the sole benchmark for a style – judge competition beers against the guidelines, not expectations from a single commercial example. One beer rarely defines the entire range of a style, so do not limit your expectations in such a restrictive way. Breweries often assign names to their beers that do not agree with our style guidelines. Be careful about selecting examples based on brewery-supplied names alone.

- **Tags.** To facilitate the sorting of styles into alternate groupings, we have applied tags to signify attributes or information about a style. The tags are in no particular order, and should not be used to infer any deeper meaning.

Style Description Language

The guidelines are a set of long documents, and some style descriptions are quite involved. To keep the prose from being bone-dry boring, synonyms (words or phrases meaning exactly the same thing, or having nearly the same meaning) are frequently used. Do not attempt to read more into the use of synonyms than is intended. In the past, some have questioned the difference between *light* and *low*, *medium* and *moderate*, *deep* and *dark*, and many other similar examples – the answer is, there is no difference between these words in this context; they are intended to mean the same things (often, relative intensities of perceptions). Take these words at their plain meaning. If you find yourself parsing the guidelines like you're trying to find a secret message in a song played backwards, you're trying too hard.

When we use multiple words to mean similar things, we are simply trying to be literate, and to use a reasonably

educated vocabulary. We don't want to be the Language Police by saying that one synonym is always right and others are always wrong. So don't look for inconsistencies in usage, or try to add nuanced distinctions in different words used to express the same concept. Don't require that words in the style guidelines be the exact same words used on scoresheets or exams. Worry more about the concept being conveyed and less about the precise expression of the concept.

We stylize lists using the Oxford comma, which is a less ambiguous grammatical construct. When describing lists of characteristics, **or** means *any or all of the items may be present*, **all** means *all of the items must be present*, **either or** means *only one of the items can be present*, **neither nor** means *none of the items can be present*. Past usage of **and/or** has been replaced by **or**, which has the same logical meaning.

When we use style names in Capital Letters, we are intending them to be a cross-reference to those styles within these guidelines. Lowercase usage of style names represents a more general reference.

Pay careful attention to the modifiers used in style descriptions. Look for guidance on the magnitude and

quality of each characteristic. Notice that many characteristics are optional; beers not evidencing these non-required elements should not be marked down. If an intensity is used in conjunction with an optional indicator, that means any intensity from none up to the listed intensity are allowable, but that the characteristic is not required.

Phrases such as *may have*, *can contain*, *might feature*, *is acceptable*, *is appropriate*, *is typical*, *optionally*, etc. all indicators of **optional** elements. **Required** elements are generally written as declaratory phrases, or use words such as *must* or *should*. Elements that must **not** be present often use phrases such as *is inappropriate*, *no*, or *must not*. Again, take these words at their plain meaning.

Do not overly focus on single words or phrases within style descriptions to the exclusion of the broader intent. Understand the overall impression of the style, the general balance, and how the style differs from related or similar styles. Do not disproportionately weight specific phrases if that would change the overall impression, balance, and meaning of the style, or if it would cause the beer to be disqualified or otherwise marked down for style issues.

INTRODUCTION TO BEER STYLES

In order to reduce the length of style descriptions, we use some basic shorthand or jargon to represent more complex thoughts, and we also omit some items that should only be noted in exceptional circumstances. Some terminology may have different meanings in certain parts of the world, so we define our usages to avoid confusion. We also identify certain characteristics that are assumed not to be present in all beer styles so that we don't have to repeat those restrictions in every style.

Basic Categorization

The most general categorization of beer styles by yeast type is a modern craft brewing phenomenon. American brewers and most other craft brewers call beers *ales* if they use top-fermenting (ale) yeast and *lagers* if they use bottom-fermenting (lager) yeast. Most categorization systems will allow for a third classification, often called spontaneously-fermented because of the method; however, *wild* or *mixed fermentation* are perhaps more widely-used modern craft beer terms for these beers fermented with bacteria or non-Saccharomyces yeast. The term *wild* in this context should not be interpreted to imply spontaneously-fermented; most are directly inoculated with the desired fermentation strains.

In Germany and other old-world brewing centers, the terminology most typically used to differentiate beers is to refer to them as *top-fermented* or *bottom-fermented*. Germans think of ale as a type of English beer, and lager as a method of conditioning beer. So, Germans would typically speak of Kölsch as a top-fermented lager beer, not an ale, for example.

English brewers, particularly when dealing in a historical context, might separate ales from porters and stouts as types of beer (although in the next breath, saying there is no difference between porters and stouts). They might go even further to describe ale as historically distinct from beer in that beer was hopped (or more highly hopped) than ale. These historical notes are important for understanding old recipes and writings, but have little relevance today in the common usages of terms describing beer.

These guidelines attempt to use the modern craft beer definitions of *ale*, *lager*, and *wild* as the major groupings of beer styles, but will mention how they might be described in local or regional contexts, if possible.

Common Attributes of All Beer Styles

The sensory attributes discussed in this section are assumed to be present in every beer style description unless otherwise noted. It is not necessary to repeat all these characteristics for every style description. *Do not assume that since a characteristic, such as diacetyl, isn't mentioned in a style description, that in any way it is allowable.*

Unless explicitly noted in an individual style description, all beer styles are assumed to be cleanly fermented and free from technical faults, including acetaldehyde, astringency, chlorophenols, diacetyl, DMS, fusel alcohol,

and phenols. All beer styles are assumed to be free of packaging and handling faults, including oxidation, light-struck, sour, and musty characteristics.

In mouthfeel, all beers are assumed to be free from astringency, and not be creamy or have any other palate sensations unless otherwise noted. Beers with an alcohol level of 6% or less are assumed to not have the flavor or warming nature of alcohol, unless otherwise noted. Higher-alcohol beers that have a noticeable alcohol presence should not be harsh, hot, solventy, or burning. The alcohol character if noted, should be clean and not have fusel alcohols.

Lagers tend to be smooth, clean, and free of esters. Stronger and darker lagers may have light esters that round out the flavor. Pale lagers, especially very fresh ones, may have light but pleasant yeast-derived sulfur notes. Some sulfur notes may be fleeting. These sulfur notes are acceptable, but foul sulfur-based aromas (rotten eggs, sewer gas, etc.) are a fault.

Styles made with a large amount of Pilsner malt may have low DMS notes; this is not a fault, but it is also not required unless otherwise noted. In both cases, the small amounts of sulfur or DMS should not be taken as meaning that prominent quantities are somehow desirable – they're not. Just be aware that the use of some traditional ingredients often leaves small sensory indications of their presence that might be considered faults in other contexts; that is perfectly acceptable, although not required.

Unless otherwise noted, assume all lagers to not have any fruitiness (esters). Ales tend to be less smooth than lagers, so unless otherwise noted, assume all ales may have some esters (not required, but not a fault).

Glossary

Some terminology used in the style guidelines may be unfamiliar to some readers. Rather than include a complete dictionary, we have highlighted a few terms that either may not be well understood, or that imply specific meanings within the guidelines. Sometimes ingredient names are used as a shorthand for the character they provide to beer. When judges use these terms, they don't necessarily imply that those specific ingredients have been used, just that the perceived characteristics match those commonly provided by the mentioned ingredients.

Hop Terms

American hops – American brewing hops from the craft beer era, typically having citrusy, resinous, evergreen, or similar characteristics. More modern hops can add a wider range of characteristics, such as stone fruit, berry, tropical fruit, and melon.

Continental hops, Old World hops – traditional European brewing hops, including German and Czech landrace hops, British brewing hops, and those other varieties from continental Europe. Typically described as floral, spicy, herbal, or earthy. Generally less intense than many New World hops.

Dry-Hopped – a post-boil addition of uncooked hop products that gives the beer a fresh, bright hop aroma. A dry-hopped beer is often more robust, vivid, and focused than the same beer without dry hops. It can shift the balance of the beer to be more hop-focused without adding bitterness. Should not be grassy, vegetal, oxidized, cheesy, or old in character. Bright and fresh, not cooked.

Juicy – a trendy modern term used to describe hops that have a quality like fresh fruit juices, especially tropical fruits. Has other meanings, such as “mouth-watering” or “wet” that don’t apply in brewing.

New World hops – American hops, along with those from Australia and New Zealand, and other non-Old World locations. Can have all the attributes of classic American hops, as well as tropical fruit, stone fruit, white grape, and other interesting aromatics.

Traditional German or Czech hops – also called *noble* or landrace hops, long considered having the finest, most refined character for traditional European lagers. Often having a subtle, lightly floral, spicy, or herbal character. Traditional implies that these are classic types, not modern, aggressive hops.

Malt or Mashing Terms

Biscuity – dry, toasted grain, flour, or dough flavor reminiscent of English digestive biscuits or cookies; in brewing, a flavor commonly associated with Biscuit malt and some traditional English malts.

Maillard products – a class of compounds produced from complex interactions between sugars and amino acids at high temperatures, resulting in brown colors and rich, malty, sometimes even somewhat meaty compounds. In previous versions of the guidelines, known as melanoidins, which are a subset of Maillard products responsible for red-brown colors (and, according to Kunze, are “aroma-intensive”). In some brewing literature, melanoidin and Maillard product are used interchangeably. The chemistry and flavor characterization of Maillard products are not well understood, so brewers and judges should avoid excessively pedantic discussions around these points. The takeaway is that we mean the richly malty flavors,

and need some kind of convenient shorthand to discuss them. Maillard is pronounced, roughly, as “my-YARD.”

Munich malt – can provide a breadly, richly malty quality that enhances the malt backbone of a beer without adding residual sweetness, although some can confuse maltiness with sweetness. Darker Munich malts can add a deeply toasted malt quality similar to toasted bread crusts.

Pilsner or Pils malt – continental Pilsner malt is quite distinctive, and has a slightly sweet, lightly grainy character with a soft, slightly toasty, honey-like quality. Higher in DMS precursors than other malts, its use can sometimes result in a low corny DMS flavor.

Vienna malt – can provide a breadly-toasty malt presence, but don’t expect the toasted notes to be extreme – they’re more like the crust of freshly baked bread than toasted bread.

Yeast or Fermentation Terms

Bubblegum – refers to the flavor profile of Bazooka Bubble Gum original flavor, a pink chewing gum; a sweet mixed fruit flavor dominated by banana and strawberry with fruit punch flavors.

Clean fermentation profile – the quality of having very low to no yeast-derived fermentation byproducts in the finished beer, typically implying that there are no esters, diacetyl, acetaldehyde, or similar components, except if specifically mentioned. A shorthand for saying that the long list of possible fermentation byproducts is not present in significant or appreciable quantities (barely perceived trace quantities at the threshold of perception are typically acceptable, nonetheless).

Kveik – traditionally, a mixed blend of yeast in Norway used to produce farmhouse style ales, often available as single strains today. Not a beer style.

Pome fruit – apple, pear, quince. The botanical classification contains other fruit, but these are the common ones we mean.

Stone fruit – fleshy fruit with a single pit (or stone), such as cherry, plum, peach, apricot, mango, etc.

Mixed Fermentation Terms

Acetic character – vinegar-like, sharp, not a clean sourness.

Brett – shorthand term for *Brettanomyces*, an attenuative genus of yeast that often is used to produce fruity (pome fruit, tropical fruit, stone fruit), floral, and often funky complex flavors (leather, sweat, barnyard, horse blanket, funk, etc.) in fermented beverages. Derived from phenols or fatty acids produced during fermentation. Literally means “British fungus” and is associated with qualities produced during barrel aging.

Common species used in brewing include *B. bruxellensis* and *B. anomalous*, although they are sometimes known by other names; several strains exist with very different

profiles (as with *S. cerevisiae*). Typically used as secondary fermentation strain, although a few strains exist that can fully attenuate wort enough to be used for primary fermentation.

Clean sourness – a quality descriptor for sourness to imply that the sourness has no vinegar, complex funk, or excessive overtones; often used to describe a good-quality, sharp lactic sourness.

Ethyl acetate – a yeast-derived ester formed from acetic acid and ethanol and produced at various levels depending on yeast strain and stress. Low levels are fruity like pears, pineapples, or berries but high levels are objectionable faults and have the aroma of solvent or nail polish remover. High levels of oxygen and wild yeast can create excessive amounts.

Indole –formed by ‘coliform’ bacteria contamination during fermentation. It is often associated with simultaneous production of DMS. Most often found in beers that have a very long lag time or in spontaneously-fermented beer. Smells of feces, dirty farm, or pig farms. At lower levels, can be jasmine or floral. Always a fault.

LAB – shorthand for Lactic Acid Bacteria, including *Lactobacillus*, *Pediococcus*, and others in the family *Lactobacillaceae*. A broader term for identifying the source of a lactic sourness.

Lacto – shorthand term for *Lactobacillus*.

Pedio – shorthand term for *Pediococcus*.

Ropinness – describes a mouthfeel where the beer develops an increase in viscosity and pours thick and syrupy. Various bacteria are the usual cause, Pedio being most common, and happens from an increase in production of polysaccharides. A common stage in mixed-culture fermentation; the presence of Brett will reduce this viscosity over time.

Sacch – shorthand term for *Saccharomyces*.

THP – shorthand for tetrahydropyridine. Usually produced by Lacto or Brett. At low levels, lends grainy, toasted oat cereal-like character (think ‘Cheerios’ cereal in the US). At high levels, can be perceived as mouse cage, mousy, or urine-like (similar to the fault in cider and wine). THP increases with oxygen exposure but active Brett will reduce it over time. Always a fault.

Quality or Off-Flavor Terms

Adjunct quality – a characteristic of beer aroma, flavor, and mouthfeel that reflects the use of higher percentages of non-malt fermentables. Can present as a corny character, a lighter body than an all-malt product, or a generally thinner-tasting beer. Does not necessarily imply the use of any specific adjunct.

Balanced – relative to a style, balanced implies a pleasant, harmonious, agreeable, complementary mix of elements, not an equal amount of each component. Does not imply any absolute quantity, more of a measure of appropriate coordination of flavor constituents.

Clean – lacking off flavors; a positive term.

Crisp – a rapid, abrupt change in the mouthfeel of beer from smoothness to sharpness, leading into a dry finish. Usually a positive term.

DMS – Dimethyl Sulfide, which can take on a wide range of perceptual characteristics. Most are inappropriate in any style of beer; however, a light, background cooked corn quality may be noted and is acceptable in beers with high levels of Pilsner malt. When the guidelines state that any levels of DMS are appropriate, it is this light cooked corn flavor, not other cooked vegetable characteristics or other DMS flavors.

Dry – same usage as with wine, meaning lacking perceived sweetness. Well-attenuated. Obviously does not mean “opposite of wet” in this context.

Elegant – smooth, tasteful, refined, pleasant character suggestive of high-quality ingredients handled with care; lacking rough edges, sharp flavors, and palate-attacking sensations.

Harsh – when applied to beer, an unpleasant, sharp, intense, or disagreeable texture, flavor, or aftertaste. Some synonyms in this context are rough, coarse, abrasive, not fine, dirtier, less refined, and less pure. A quality term indicating the opposite of smooth, clean, and pleasant. Can imply astringency, but also can apply to bitterness, alcohol, and other sensations. Negative.

Funky – a positive or negative term, depending on the context. If expected or desirable, can often take on a barnyard, wet hay, slightly earthy, horse blanket, or farmyard character. If too intense, unexpected, or undesirable, can take the form of silage, fecal, baby diaper, or horse stall qualities.

Rustic – coarse, hearty, robust character reminiscent of older, traditional ingredients; perhaps less refined as a general sensory experience.

Appearance Terms

Belgian Lace, Lacing – a characteristic and persistent latticework pattern of foam left on the inside of the glass as a beer is consumed. The look is reminiscent of fine lacework from Belgium, where it is considered a desirable indicator of beer quality.

Legs – a pattern that a beverage leaves on the inside of a glass after a portion has been consumed. The term refers to the droplets that slowly fall in streams from beverage residue on the side of the glass. Not an indication of quality, but can indicate a higher alcohol, sugar, or glycerol content.

Color Reference

Note that SRM is a measure of beer color density more than hue, tint, or shade. Keep this in mind when attempting to use only SRM numbers when describing beers. Within these Guidelines, beer color descriptors generally approximate this mapping to SRM values:

Straw	2-3
Yellow	3-4
Gold	5-6
Amber	6-9
Deep amber/light copper	10-14
Copper	14-17
Deep copper/light brown	17-18
Brown	19-22
Dark Brown	22-30
Very Dark Brown	30-35
Black	30+
Black, opaque	40+

Do not be overly pedantic about ascribing perceived color names to SRM references, as viewing conditions often greatly influence this perception, individual perceptions vary, and hues outside of the yellow-to-brown spectrum can skew results. In the event of apparent contradictions, favor the named descriptions over the numbers.

Style Organization

The beer styles described in the guidelines have been categorized to assist with running homebrew competitions. Categories (the major groupings of styles) are artificial constructs that represent a collection of individual sub-categories (beer styles) that may or may not have any historical, geographic, or traditional relationship to each other.

Do not infer that membership in a style category somehow relates individual beer styles to each other. The only reason why styles are grouped together is to assist with managing of competitions scale and complexity. Names given to the groupings are for competition purposes only, and may not be found in broader contexts in the beer and brewing industries.

Competitions do not have to judge each style category separately; they may be combined, split, or otherwise reorganized for competition purposes. Competition organizers are free to combine style sub-categories into their own competition categories. As long as each submitted beer is judged against the identified sub-category (style), any logical grouping is permitted.

Style Tag Reference

To assist with regrouping styles for other purposes, we have added informational tags to each style. These tags indicate certain attributes of the beer that may be used for grouping purposes. The ‘meaning’ column explains the general intent of the tag, but is not meant to be rigorous, formal definition. In no way do the tags supersede the actual descriptions of the style.

Category	Tag	Meaning
Strength		
	session-strength	<4% ABV
	standard-strength	4-6% ABV
	high-strength	6-9% ABV
	very-high-strength	>9% ABV
Color		
	pale-color	straw to gold
	amber-color	amber to copper-brown
	dark-color	dark brown to black
Fermentation/Conditioning		
	top-fermented	ale yeast
	bottom-fermented	lager yeast
	any-fermentation	ale yeast or lager yeast
	wild-fermented	non-Saccharomyces yeast/bacteria
	lagered	cold conditioned
	aged	long conditioning before release
Region of Origin		
	british-isles	England, Wales, Scotland, Ireland
	western-europe	Belgium, France, Netherlands
	central-europe	Germany, Austria, Czech Republic, Scandinavia
	eastern-europe	Poland, Baltic States, Russia
	north-america	United States, Canada, Mexico
	pacific	Australia, New Zealand
Style Family		
	ipa-family	
	brown-ale-family	
	pale-ale-family	
	pale-lager-family	
	pilsner-family	
	amber-ale-family	
	amber-lager-family	
	dark-lager-family	
	porter-family	
	stout-family	
	bock-family	
	strong-ale-family	
	wheat-beer-family	
	specialty-beer	

Category	Tag	Meaning
Era		
	craft-style	developed in the modern craft beer era
	traditional-style	developed before the modern craft beer era
	historical-style	no longer made, or very limited production
Dominant Flavor		
	malty	malt-forward flavor
	bitter	bitter-forward flavor
	balanced	similar malt and bitter intensity
	hoppy	hop flavor
	roasty	roasted malt or grain
	sweet	noticeable residual sweetness or sugar flavor
	smoke	flavor of smoked malt or grain
	sour	noticeable sourness or intentionally elevated acidity
	wood	wood or barrel age character
	fruit	noticeable flavor or aroma of fruit
	spice	noticeable flavor or aroma of spices

1. STANDARD AMERICAN BEER

This category describes everyday American beers that have a wide public appeal. Containing both ales and lagers, the beers of this category are not typically complex, and have smooth, accessible flavors. The ales tend to have lager-like qualities, or are designed to appeal to mass-market lager drinkers as crossover beers. Mass-market beers with a more international appeal or origin are described in the International Lager category.

1A. American Light Lager

Overall Impression: A highly carbonated, very light-bodied, nearly flavorless lager designed to be consumed very cold. Very refreshing and thirst-quenching.

Aroma: Low malt aroma optional, but may be perceived as grainy, sweet, or corn-like, if present. Light spicy, floral, or herbal hop aroma optional. While a clean fermentation profile is desirable, a light amount of yeast character is not a fault.

Appearance: Very pale straw to pale yellow color. White, frothy head seldom persists. Very clear.

Flavor: Relatively neutral palate with a crisp, dry finish and a low to very low grainy or corn-like flavor that might be perceived as sweetness due to the low bitterness. Low floral, spicy, or herbal hop flavor optional, but is rarely strong enough to detect. Low to very low bitterness. Balance may vary from slightly malty to slightly bitter, but is usually close to even. High carbonation may accentuate the crispness of the dry finish. Clean fermentation profile.

Mouthfeel: Very light, sometimes watery, body. Very highly carbonated with slight carbonic bite on the tongue.

Comments: Designed to appeal to as broad a range of the general public as possible. Strong flavors are a fault. With little malt or hop flavor, the yeast character often is what most differentiates brands.

History: Coors briefly made a light lager in the early 1940s. Modern versions were first produced by Rheingold in 1967 to appeal to diet-conscious drinkers, but only became popular starting in 1973 after Miller Brewing acquired the recipe and marketed the beer heavily to sports fans with the “tastes great, less filling” campaign. Beers of this genre became the largest sellers in the United States in the 1990s.

Characteristic Ingredients: Two- or six-row barley with up to 40% rice or corn as adjuncts. Additional enzymes can further lighten the body and lower carbohydrates. Lager yeast. Negligible hops.

Style Comparison: A lighter-bodied, lower-alcohol, lower calorie version of an American Lager. Less hop character and bitterness than a German Leichtbier.

Vital Statistics:

OG:	1.028 – 1.040
IBUs:	8 – 12
SRM:	2 – 3
FG:	0.998 – 1.008
ABV:	2.8 – 4.2%

Commercial Examples: Bud Light, Coors Light, Grain Belt Premium Light American Lager, Michelob Light, Miller Lite, Old Milwaukee Light

Tags: session-strength, pale-color, bottom-fermented, lagered, north-america, traditional-style, pale-lager-family, balanced

1B. American Lager

Overall Impression: A very pale, highly-carbonated, light-bodied, well-attenuated lager with a very neutral flavor profile and low bitterness. Served very cold, it can be a very refreshing and thirst-quenching drink.

Aroma: Low malt aroma optional, but may be perceived as grainy, sweet, or corn-like, if present. Light spicy or floral hop aroma optional. While a clean fermentation profile is desirable, a light amount of yeast character is not a fault.

Appearance: Very pale straw to medium yellow color. White, frothy head seldom persists. Very clear.

Flavor: Relatively neutral palate with a crisp, dry finish and a moderately-low to low grainy or corn-like flavor that might be perceived as sweetness due to the low bitterness. Moderately low hop flavor optional, with a floral, spicy, or herbal quality, if strong enough to distinguish. Low to medium-low bitterness. Balance may vary from slightly malty to slightly bitter, but is usually close to even. High carbonation may accentuate the crispness of the dry finish. Clean fermentation profile.

Mouthfeel: Low to medium-low body. Very highly carbonated with slight carbonic bite on the tongue.

Comments: Often what non-craft beer drinkers expect to be served if they order *beer* in the United States. May be marketed as Pilsner outside Europe, but should not be confused with traditional examples. Strong flavors are a fault. With little malt or hop flavor, the yeast character is what most frequently differentiates brands.

History: Evolved from Pre-Prohibition Lager (see Category 27) in the US after Prohibition and World War II. Surviving breweries consolidated, expanded distribution, and heavily promoted a beer style that appealed to a broad range of the population. Became the dominant beer style for many decades, and spawned many international rivals who would develop similarly bland products for the mass market supported by heavy advertising.

Characteristic Ingredients: Two- or six-row barley with up to 40% rice or corn as adjuncts. Lager yeast. Light use of hops.

Style Comparison: Stronger, more flavor and body than an American Light Lager. Less bitterness and flavor than an International Pale Lager. Significantly less flavor, hops, and bitterness than traditional European Pilsners.

Vital Statistics:

OG:	1.040 – 1.050
IBUs:	8 – 18
SRM:	2 – 3.5
FG:	1.004 – 1.010
ABV:	4.2 – 5.3%

Commercial Examples: Budweiser, Coors Original, Grain Belt Premium American Lager, Miller High Life, Old Style, Pabst Blue Ribbon, Special Export

Tags: standard-strength, pale-color, bottom-fermented, lagered, north-america, traditional-style, pale-lager-family, balanced

1C. Cream Ale

Overall Impression: A clean, well-attenuated, highly carbonated, flavorful American “lawnmower” beer. Easily drinkable, smooth, and refreshing, with more character than typical American lagers, yet still subtle and restrained.

Aroma: Medium-low to low malt notes, with a sweet, corn-like aroma. Low DMS optional. Medium-low hop aroma optional, using any variety but floral, spicy, or herbal notes are most common. Overall, has a subtle, balanced aroma. Low fruity esters optional.

Appearance: Pale straw to light gold color, although usually on the pale side. Low to medium head with medium to high carbonation. Fair head retention. Brilliant, sparkling clarity. Effervescent.

Flavor: Low to medium-low hop bitterness. Low to moderate malty sweetness, varying with gravity and attenuation. The malt is generally neutral, possibly grainy or crackery. Usually well-attenuated. Balanced palate, with hops only enough to support the malt. A low to moderate corny flavor is commonly found, but light DMS is optional. Finish can vary from somewhat light, dry, and crisp to faintly sweet. Clean fermentation profile, but low fruity esters are optional. Low to medium-low hop flavor of any variety, but typically floral, spicy, or herbal. Subtle.

Mouthfeel: Generally light and crisp, although body can reach medium. Smooth mouthfeel with medium to high attenuation; higher attenuation levels can lend a “thirst quenching” quality. High carbonation.

Comments: Most commercial examples are in the 1.050–1.053 OG range, and bitterness rarely rises above 20 IBUs.

History: A sparkling or present-use ale from the second half of the 1800s that survived prohibition. An ale brewed to compete with lagers brewed in Canada and the US Northeast, Mid-Atlantic, and Midwest states.

Characteristic Ingredients: American six-row malt, or a combination of six-row and North American two-row. Up to 20% maize in the mash, and up to 20% sugar in the boil. Any variety of hops, often rustic American or Continental. Clean ale yeast, or a mix of ale and lager beer.

Style Comparison: Similar to a Standard American Lager, but with more character. Lighter body, smoother, and more carbonated than a Blonde Ale. May seem like a somewhat subtle Kölsch.

Vital Statistics:
IBUs: 8 – 20
SRM: 2 – 5

OG: 1.042 – 1.055
FG: 1.006 – 1.012
ABV: 4.2 – 5.6%

Commercial Examples: Genesee Cream Ale, Liebotschaner Cream Ale, Kiwanda Pre-Prohibition Cream Ale, Little Kings Cream Ale, Sleeman Cream Ale, Sun King Sunlight Cream Ale

Tags: standard-strength, pale-color, any-fermentation, north-america, traditional-style, pale-ale-family, balanced

1D. American Wheat Beer

Overall Impression: A pale, refreshing grainy, doughy, or bready wheat beer with a clean fermentation profile and a variable hop character and bitterness. Its lighter body and higher carbonation contribute to its easy-drinking nature.

Aroma: Low to moderate grainy, bready, or doughy wheat character. A light to moderate malty sweetness is acceptable. Moderate esters optional, usually a neutral profile; banana is inappropriate. Low to moderate citrusy, spicy, floral, or fruity hop aroma. Not typically dry-hopped. No clove phenols.

Appearance: Usually pale yellow to gold. Clarity may range from brilliant to hazy with yeast approximating a Weissbier. Big, long-lasting white head.

Flavor: Light to moderately-strong bready, doughy, or grainy wheat flavor, which can linger into the finish. May have a moderate malty sweetness or can finish quite dry and crisp. Low to moderate hop bitterness, sometimes lasting into the finish. Balance is usually even, but may be slightly bitter. Low to moderate citrusy, spicy, floral, or fruity hop flavor. Moderate esters optional. No banana. No clove phenols.

Mouthfeel: Medium-light to medium body. Medium-high to high carbonation. Slight creaminess is optional; wheat beers sometimes have a soft, ‘fluffy’ impression.

Comments: Different variations exist, from an easy-drinking fairly sweet beer to a dry, aggressively-hopped beer with a strong wheat flavor. American Rye beers should be entered as 31A Alternative Grain Beer.

History: An American craft beer adaptation of the Weissbier style using a cleaner yeast and more hops, first produced by Anchor in 1984 and later widely popularized by Widmer.

Characteristic Ingredients: Clean American ale or lager yeast. German Weissbier yeast is inappropriate. Wheat malt (often 30–50%, lower than is typical in Weissbier). American, German, or New World hops.

Style Comparison: More hop character and less yeast character than Weissbier. Never with the banana and clove character of Weissbier. Generally has the same range and balance as Blonde Ales, but with a wheat character as the primary malt flavor.

Vital Statistics:
IBUs: 15 – 30
SRM: 3 – 6

OG: 1.040 – 1.055
FG: 1.008 – 1.013
ABV: 4.0 – 5.5%

Commercial Examples: Bell’s Oberon, Boulevard Unfiltered Wheat Beer, GoodLife Sweet As! Pacific Ale, Goose Island 312 Urban Wheat Ale, Widmer Hefeweizen

Tags: standard-strength, pale-color, any-fermentation, north-america, craft-style, wheat-beer-family, balanced

2. INTERNATIONAL LAGER

International lagers are the premium, industrial, mass-market lagers produced in most countries in the world. Whether developed from American or European styles, they all tend to have a fairly uniform character and are heavily marketed. Loosely derived from original Pilsner-type lagers, with colored variations having additional malt flavors while retaining a broad appeal. In many countries, the styles will be referred to by their local country names. The use of the term “international” doesn’t mean that any beers are actually labeled as such, but is more of a categorization of similar beers produced worldwide.

2A. International Pale Lager

Overall Impression: A highly-attenuated pale lager without strong flavors, typically well-balanced and highly carbonated. Served cold, it is refreshing and thirst-quenching.

Aroma: Low to medium-low grainy-malty or slightly corny-sweet malt aroma. Very low to medium spicy, floral, or herbal hop aroma. Clean fermentation profile.

Appearance: Pale straw to gold color. White, frothy head may not be long lasting. Very clear.

Flavor: Low to moderate levels of grainy-malt flavor, medium-low to medium bitterness, with a crisp, dry, well-attenuated finish. The grain character can be somewhat neutral, or show a light bready-crackery quality. Moderate corny or malty sweetness optional. Medium floral, spicy, or herbal hop flavor optional. Balance may vary from slightly malty to slightly bitter, but is usually relatively close to even. Neutral aftertaste with light malt and sometimes hop flavors.

Mouthfeel: Light to medium body. Moderately high to highly carbonated. Can have a slight carbonic bite on the tongue.

Comments: Tends to have fewer adjuncts than American Lagers. They may be all-malt, although strong flavors are still a fault. A broad category of international mass-market lagers ranging from up-scale American lagers to the typical “import” or “green bottle” international beers found in America and many export markets. Often confusingly labeled as a “Pilsner.” Any skunkiness in commercial beers is a handling fault, not a characteristic of the style.

History: In the United States, developed as a premium version of the standard American lager, with a similar history. Outside the US, developed either as an imitation of American-style lagers, or as a more accessible (and often drier and less bitter) version of a Pilsner-type beer. Often heavily marketed and exported by large industrial or multi-national breweries.

Characteristic Ingredients: Two- or six-row barley. May use rice, corn, or sugar as adjuncts, but are generally all malt.

Style Comparison: Generally more bitter and filling than American Lager. Less hoppy and bitter than a German Pils. Less body, malt flavor, and hop character than a Czech Premium Pale Lager. More robust versions can approach a Munich Helles in flavor, but with more of an adjunct quality.

Entry Instructions: Entrant may specify regional variations, if desired (Mexican lager, Dutch lager, etc.).

Vital Statistics: OG: 1.042 – 1.050
IBUs: 18 – 25 FG: 1.008 – 1.012
SRM: 2 – 6 ABV: 4.5 – 6.0%

Commercial Examples: Asahi Super Dry, Birra Moretti, Corona Extra, Devils Backbone Gold Leaf Lager, Full Sail Session Premium Lager, Heineken, Red Stripe, Singha

Tags: standard-strength, pale-color, bottom-fermented, lagered, traditional-style, pale-lager-family, balanced

2B. International Amber Lager

Overall Impression: A smooth, easily-drinkable, malty amber lager with a flavorful caramel or toast character. Usually fairly well-attenuated, often with an adjunct quality and restrained bitterness.

Aroma: Low to moderate grainy malt aroma often with very low to moderate caramel or toasty malt accents. Occasionally, nutty or biscuity, but never roasty. Low, unobtrusive floral or spicy hop aroma. Clean fermentation profile.

Appearance: Golden-amber to reddish-copper color. Bright clarity. White to off-white foam stand which may not last.

Flavor: Low to moderate malt flavor, often with caramel or toasty-bready flavors. Low to medium-low corny sweetness optional. Low to moderate bitterness, giving the beer a malty to fairly even balance. Low to moderate spicy, herbal, or floral hop flavor. Clean fermentation profile. The finish is moderately dry with a moderately malty aftertaste. The beer may seem a touch sweet if the bitterness level is low.

Mouthfeel: Light to medium body. Medium to high carbonation. Smooth. Some examples can be slightly creamy.

Comments: A wide spectrum of mass-market amber lagers either developed independently in various countries, or describing rather generic amber beers with more historical relevance that eventually changed into indistinguishable products in modern times.

History: Varies by country, but generally represents either an adaptation of the mass-market International Pale Lager, or an evolution of indigenous styles into more generic products.

Characteristic Ingredients: Two-row or six-row base malt. Color malts such as Victory, amber, or roast. May be all malt or use adjuncts. Sugars or coloring agents possible. Caramel malt. European or American hops.

Style Comparison: Less well-developed malt flavor than a Vienna Lager, often with an adjunct taste. Less robust flavor and bitterness than Altbier.

Vital Statistics: OG: 1.042 – 1.055
IBUs: 8 – 25 FG: 1.008 – 1.014
SRM: 6 – 14 ABV: 4.5 – 6.0%

Commercial Examples: Abita Amber Lager, Brooklyn Lager, Capital Wisconsin Amber Lager, Dos Equis Amber, Grain Belt NordEast, Yuengling Lager

Tags: standard-strength, amber-color, bottom-fermented, lagered, traditional-style, amber-lager-family, malty

2C. International Dark Lager

Overall Impression: A darker, richer, and somewhat sweeter version of international pale lager with a little more body and flavor, but equally restrained in bitterness. The low bitterness leaves the malt as the primary flavor element, and the low hop levels provide very little in the way of balance.

Aroma: Faint malt aroma. Medium-low roast and caramel malt aroma optional. Light spicy, herbal, or floral hop aroma optional. Clean fermentation profile.

Appearance: Deep amber to very dark brown with bright clarity and ruby highlights. Foam stand may not be long lasting, and is beige to light tan in color.

Flavor: Low to medium sweet maltiness. Medium-low caramel or roasted malt flavors optional, possibly with hints of coffee, molasses, brown sugar, or cocoa. Low floral, spicy, or herbal hop flavor optional. Low to medium bitterness. May have a very light fruitiness. Moderately crisp finish. The balance is typically somewhat malty. Burnt or moderately strong roasted malt flavors are inappropriate.

Mouthfeel: Light to medium-light body. Smooth with a light creaminess. Medium to high carbonation.

Comments: A broad range of international lagers that are darker than pale, and not assertively bitter or roasted.

History: Darker versions of International Pale Lagers often created by the same large, industrial breweries and meant to appeal to a broad audience. Often either a colored or sweetened adaptation of the standard pale industrial lager, or a more broadly accessible (and inexpensive) version of more traditional dark lagers.

Characteristic Ingredients: Two- or six-row barley with corn, rice, or sugars adjuncts. Light use of caramel and darker roasted malts. Commercial versions may use coloring agents.

Style Comparison: Less flavor and richness than Munich Dunkel, Schwarzbier, or other dark lagers. Frequently uses adjuncts, as is typical of other International Lagers.

Vital Statistics:

OG:	1.044 – 1.056
IBUs:	8 – 20
SRM:	14 – 30
FG:	1.008 – 1.012
ABV:	4.2 – 6.0%

Commercial Examples: Baltika #4 Original, Dixie Blackened Voodoo, Heineken Dark Lager, Saint Pauli Girl Special Dark, San Miguel Dark, Shiner Bock

Tags: standard-strength, dark-color, bottom-fermented, lagered, traditional-style, dark-lager-family, malty

3. CZECH LAGER

Czech lagers are generally divided by gravity class (draft, lager, special) and color (pale, amber, dark). The Czech names for these categories are světlé (pale), polotmavé (amber), and tmavé (dark). The gravity classes are výčepní (draft, 7–10 °P), ležák (lager, 11–12 °P), and speciální (special, 13 °P+). Pivo is of course the Czech word for beer. The division into gravity classes is similar to the German groupings of schankbier, vollbier, and starkbier, although at different gravity ranges. Czech beers within the classes are often simply referenced by their gravity. There are often variations within the gravity-color groupings, particularly within the speciální class. The style guidelines combine some of these classes, while other beers in the Czech market are not described (such as the strong Czech Porter). This is not to imply that the categories below are the full coverage of Czech beers, simply a way of grouping some of the more commonly found types for judging purposes.

Czech lagers in general are differentiated from German and other Western lagers in that German lagers are almost always fully attenuated, while Czech lagers can have a slight amount of unfermented extract remaining in the finished beer. This helps provide a slightly higher finishing gravity (and thus slightly lower apparent attenuation), slightly fuller body and mouthfeel, and a richer, slightly more complex flavor profile in equivalent color and strength beers. German lagers tend to have a cleaner fermentation profile, while Czech lagers are often fermented cooler (7–10 °C) and for a longer time, and can have a light, barely noticeable (near threshold) amount of diacetyl that often is perceived more as a rounded body than overtly in aroma and flavor [significant buttery diacetyl is a flaw]. Czech lager yeast strains are not always as clean and attenuative as German strains, which helps achieve the higher finishing gravity (along with the mashing methods and cooler fermentation). Czech lagers are traditionally made with decoction mashes (often double decoction), even with modern malts, while most modern German lagers are made with infusion or step infusion mashes. These differences characterize the richness, mouthfeel, and flavor profile that distinguishes Czech lagers.

3A. Czech Pale Lager

Overall Impression: A lighter-bodied, rich, refreshing, hoppy, bitter pale Czech lager having the familiar flavors of the stronger Czech Premium Pale Lager (Pilsner-type) beer but in a lower alcohol, lighter-bodied, and slightly less intense format.

Aroma: Light to moderate bready-rich malt combined with light to moderate spicy or herbal hop bouquet; the balance between the malt and hops may vary. Faint hint of caramel is acceptable. Light (but never intrusive) diacetyl and light, fruity esters are optional. No sulfur.

Appearance: Light yellow to deep gold color. Brilliant to very clear, with a long-lasting, creamy white head.

Flavor: Medium-low to medium bready-rich malt flavor with a rounded, hoppy finish. Low to medium-high spicy or herbal hop flavor. Bitterness is prominent but never harsh. Flavorful and refreshing. Low diacetyl or fruity esters are optional, but should never be overbearing.

Mouthfeel: Medium-light to medium body. Moderate carbonation.

Comments: The Czech name of the style is *světlé výčepní pivo*.

History: Josef Groll initially brewed two types of pale beer in 1842–3, a *výčepní* and a *ležák*, with the smaller beer having twice the production; Evan Rail speculates that these were probably 10 °P and 12 °P beers, but that the *výčepní* could have been weaker. This is the most consumed type of beer in the Czech Republic at present.

Characteristic Ingredients: Soft water with low sulfate and carbonate content. Traditional Czech hops. Czech Pilsner malt. Czech lager yeast. Low ion water provides a distinctively soft, rounded hop profile despite high hopping rates.

Style Comparison: A lighter-bodied, lower-intensity, refreshing, everyday version of Czech Premium Pale Lager.

Vital Statistics: OG: 1.028 – 1.044
IBUs: 20 – 35 FG: 1.008 – 1.014
SRM: 3 – 6 ABV: 3.0 – 4.1%

Commercial Examples: Bernard světlé pivo 10, Břežňák světlé výčepní pivo, Notch Session Pils, Primátor Antonín světlé výčepní, Radegast Rázna 10, Únětické pivo 10°

Tags: session-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pale-lager-family, bitter, hoppy

3B. Czech Premium Pale Lager

Overall Impression: A refreshing pale Czech lager with considerable malt and hop character and a long finish. The malt flavors are complex for a Pilsner-type beer. The bitterness is strong and clean but lacks harshness, which gives a well-balanced, rounded flavor impression that enhances drinkability.

Aroma: Medium to medium-high bready-rich malt and medium-low to medium-high spicy, floral, or herbal hop bouquet; though the balance between the malt and hops may vary, the interplay is rich and complex. Light diacetyl, or very low fruity esters are optional. Esters tend to increase with gravity.

Appearance: Medium yellow to deep gold color. Brilliant to very clear clarity. Dense, long-lasting, creamy white head.

Flavor: Rich, complex, bready maltiness combined with a pronounced yet soft and rounded bitterness and floral and spicy hop flavor. Malt and hop flavors are medium to medium-high, and the malt may contain a slight impression of caramel. Bitterness is prominent but never harsh. The long finish can be balanced towards hops or malt but is never aggressively tilted either way. Light to moderately-low diacetyl and low hop-derived esters are acceptable, but need not be present.

Mouthfeel: Medium body. Moderate to low carbonation.

Comments: Generally a group of *pivo Plzeňského typu*, or Pilsner-type beers. This style is a combination of the Czech styles *světlý ležák* (11–12.9 °P) and *světlé speciální pivo* (13–14.9 °P). In the Czech Republic, only Pilsner Urquell and Gambrinus are called Pilsner, despite how widely adopted this name is worldwide. Outside the Czech Republic, Czech Pilsner or Bohemian Pilsner are sometimes used to differentiate the beer from other Pilsner-type beers.

Kvasnicové (“yeast beer”) versions are popular in the Czech Republic, and may be either *kräusened* with yeasted wort or given a fresh dose of pure yeast after fermentation. These beers are sometimes cloudy, with subtle yeastiness and enhanced hop character. Modern examples vary in their malt to hop balance and many are not as hop-forward as Pilsner Urquell.

History: Commonly associated with Pilsner Urquell, which was first brewed in 1842 after construction of a new brewhouse by burghers dissatisfied with the standard of beer brewed in Plzeň. Bavarian brewer Josef Groll is credited with first brewing the beer, although there may have been earlier pale lagers in Bohemia. Just as important as the lager yeast was the use of English malting techniques.

Characteristic Ingredients: Traditional Czech hops. Czech malt. Czech lager yeast. Water low in sulfate and carbonate provides a distinctively soft, rounded hop profile despite high hopping rates. The bitterness level of some larger commercial examples has dropped in recent years, although not as much as in many contemporary German examples.

Style Comparison: More color, malt richness, and body than a German Pils, with a fuller finish and a cleaner, softer impression. Stronger than a Czech Pale Lager.

Vital Statistics: OG: 1.044 – 1.060
IBUs: 30 – 45 FG: 1.013 – 1.017
SRM: 3.5 – 6 ABV: 4.2 – 5.8%

Commercial Examples: Bernard světlé ležák 12°, Budvar 33 světlý ležák, Pilsner Urquell, Pivovar Jihlava Ježek 11%, Primátor Premium lager, Radegast Ryze hořká 12, Únětická pivo 12°

Tags: standard-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pilsner-family, balanced, hoppy

3C. Czech Amber Lager

Overall Impression: A malty amber Czech lager with a hop character that can vary from low to quite significant. The malt flavors also can vary, leading to different interpretations and balances ranging from drier, bready, and slightly biscuity to sweeter and somewhat caramel-like.

Aroma: Moderate intensity, rich malt aroma that can be either bready and Maillard product-dominant or slightly caramelly sweet. Spicy, floral, or herbal hop character may be moderate to none. Clean lager character, though low fruity esters (stone fruit or berries) may be present. Low diacetyl optional.

Appearance: Deep amber to copper color. Clear to bright clarity. Large, off-white, persistent head.

Flavor: Complex malt flavor is dominant (medium to medium-high), though its nature may vary from dry and Maillard product-dominant to caramelly and almost sweet. Some examples have a candy-like to graham-cracker malt character. Low to moderate spicy hop flavor. Prominent but clean hop bitterness provides a balanced finish. Subtle plum or berry esters optional. Low diacetyl optional. No roasted malt flavor. Finish may vary from dry and hoppy to relatively sweet.

Mouthfeel: Medium-full to medium body. Soft and round, often with a gentle creaminess. Moderate to low carbonation.

Comments: The Czech name of the style is *polotmavé pivo*, which translates as *half-dark beer*. This style is a combination of the Czech styles *polotmavý ležák* (11–12.9 °P) and *polotmavé speciální pivo* (13–14.9 °P). Some versions may be a blend of pale and dark lagers.

History: A Vienna-style lager which has continued to be brewed in the Czech Republic. A resurgence of small breweries opening in the Czech Republic has increased the number of examples of this style.

Characteristic Ingredients: Pilsner and caramel malts, but Vienna and Munich malts may also be used. Low mineral content water. Traditional Czech hops. Czech lager yeast.

Style Comparison: The style can be similar to a Vienna Lager but with stronger Czech late hop character, or that approaching a British Bitter but significantly richer with more of a deep caramel character. Large brewery versions are generally similar to Czech Premium Pale Lager with slightly darker malt flavors and less hop, while smaller breweries often make versions with considerable hop character, malt complexity, or residual sweetness.

Vital Statistics: OG: 1.044 – 1.060
IBUs: 20 – 35 FG: 1.013 – 1.017
SRM: 10 – 16 ABV: 4.4 – 5.8%

Commercial Examples: Bernard Jantarový ležák 12°, Gambinus Polotmavá 12°, Kozel Semi-Dark, Lobkowicz Démon 13, Primátor 13 polotmavé, Strakonický Dudák Klostermann polotmavý ležák

Tags: standard-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, amber-lager-family, balanced

3D. Czech Dark Lager

Overall Impression: A rich, dark, malty Czech lager with a roast character that can vary from almost absent to quite prominent. Malty balance and an interesting and complex flavor profile, with variable levels of hopping that provides a range of possible interpretations.

Aroma: Medium to medium-high rich, deep, sometimes sweet maltiness, with optional qualities such as bread crusts, toast, nuts, cola, dark fruit, or caramel. Roasted malt characters such as chocolate or sweetened coffee can vary from moderate to none but should not overwhelm the base malt character. Low to moderate spicy hop aroma optional. Low diacetyl and low to moderate fruity esters (plums or berries) may be present.

Appearance: Dark copper to almost black color, often with a red or garnet tint. Clear to bright clarity. Large, off-white to tan, persistent head.

Flavor: Medium to medium-high deep, complex maltiness dominates, typically with malty-rich Maillard products and a light to moderate residual malt sweetness. Malt flavors such as caramel, toast, nuts, licorice, dried dark fruit, chocolate, or coffee may also be present, with very low to moderate roast character. Low to moderate spicy hop flavor. Moderate to medium-low bitterness, but should be perceptible. Balance can vary from malty to relatively well-balanced to gently hop-forward. Low to moderate diacetyl and light plum or berry esters may be present.

Mouthfeel: Medium to medium-full body, considerable mouthfeel without being heavy or cloying. Moderately creamy in texture. Smooth. Moderate to low carbonation. Can have a slight alcohol warmth in stronger versions.

Comments: This style is a combination of the Czech styles *tmavý ležák* (11–12.9 °P) and *tmavé speciální pivo* (13–14.9 °P). More modern examples are drier and have higher bitterness while traditional versions often have IBUs in the 18–20 range with a sweeter balance.

History: The U Fleků brewery has been operating in Prague since 1499, and produces the best-known version. Many small, new breweries are brewing this style.

Characteristic Ingredients: Pilsner and dark caramel malts with the addition of debittered roasted malts are most common, but additions of Vienna or Munich malt are also appropriate. Low mineral content water. Traditional Czech hops. Czech lager yeast.

Style Comparison: The beer is the Czech equivalent of a dark lager ranging in character from Munich Dunkel to Schwarzbier, but typically with greater malt richness and hop aroma, flavor, and bitterness.

Vital Statistics:

OG: 1.044 – 1.060	
IBUs: 18 – 34	FG: 1.013 – 1.017
SRM: 17 – 35	ABV: 4.4 – 5.8%

Commercial Examples: Bernard černý ležák 12°, Budvar tmavý ležák, Herold tmavé silné pivo 13°, Kozel Dark, Krušovice černé, Primátor dark lager, U Fleků Flekovský tmavý ležák 13°

Tags: standard-strength, dark-color, bottom-fermented, lagered, central-europe, traditional-style, dark-lager-family, balanced

4. PALE MALTY EUROPEAN LAGER

This style category contains pale German lagers of vollbier to starkbier strength that emphasize the flavor of Pilsner malt in the balance while remaining well-attenuated.

4A. Munich Helles

Overall Impression: A gold-colored German lager with a smooth, malty flavor and a soft, dry finish. Subtle spicy, floral, or herbal hops and restrained bitterness help keep the balance malty but not sweet, which helps make this beer a refreshing, everyday drink.

Aroma: Moderate grainy-sweet malt aroma. Low to moderately-low spicy, floral, or herbal hop aroma. Pleasant, clean fermentation profile, with malt dominating the balance. The freshest examples will have more of a malty-sweet aroma.

Appearance: Pale yellow to pale gold. Clear. Persistent creamy white head.

Flavor: Moderately malty start with the suggestion of sweetness, moderate grainy-sweet malt flavor with a soft, rounded palate impression, supported by a low to medium-low bitterness. Soft and dry finish, not crisp and biting. Low to moderately-low spicy, floral, or herbal hop flavor. Malt dominates hops in the palate, finish, and aftertaste, but hops should be noticeable. No residual sweetness, simply the impression of maltiness with restrained bitterness. Clean fermentation profile.

Mouthfeel: Medium body. Medium carbonation. Smooth, well-lagered character.

Comments: Very fresh examples can have a more prominent malt and hop character that fades over time, as is often noticed in exported beers. Helles in Munich tends to be a lighter version than those outside the city. May be called Helles Lagerbier.

History: Created in Munich in 1894 to compete with pale Pilsner-type beers, often first credited to Spaten. More popular in Southern Germany.

Characteristic Ingredients: Continental Pilsner malt. Traditional German hops. Clean German lager yeast.

Style Comparison: Similar in malt balance and bitterness to Munich Dunkel, but less malty-sweet in nature and pale rather than dark and rich. More body and malt presence than a German Pils, but less crisp and with less hop character throughout. Similar malt profile as a German Helles Exportbier, but with fewer hops in the balance and slightly less alcohol. Less body and alcohol than a Festbier.

Vital Statistics:
IBUs: 16 – 22
SRM: 3 – 5

OG: 1.044 – 1.048
FG: 1.006 – 1.012
ABV: 4.7 – 5.4%

Commercial Examples: Augustiner Lagerbier Hell, Hacker-Pschorr Münchner Gold, Löwenbraü Original, Paulaner Münchner Lager, Schönramer Hell, Spaten Münchner Hell, Weihenstephaner Original Heles

Tags: standard-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pale-lager-family, malty

4B. Festbier

Overall Impression: A smooth, clean, pale German lager with a moderately strong malty flavor and a light hop character. Deftly balances strength and drinkability, with a palate impression and finish that encourages drinking. Showcases elegant German malt flavors without becoming too heavy or filling.

Aroma: Moderate malty richness, with an emphasis on toasty-doughy aromatics and an impression of sweetness. Low to medium-low floral, herbal, or spicy hops. The malt should not have a deeply toasted, caramel, or biscuity quality. Clean lager fermentation profile.

Appearance: Deep yellow to deep gold color; should not have amber hues. Bright clarity. Persistent white to off-white foam stand. Most commercial examples are pale gold in color.

Flavor: Medium to medium-high malty flavor initially, with a lightly toasty, bread dough quality and an impression of soft malty richness. Medium to medium-low bitterness, definitely malty in the balance. Well-attenuated and crisp, but not dry. Medium-low to medium floral, herbal, or spicy hop flavor. Clean fermentation profile. The taste is mostly of Pils malt, but with slightly toasty hints. The bitterness is supportive, but still should yield a malty, flavorful finish.

Mouthfeel: Medium body, with a smooth, somewhat creamy texture. Medium carbonation. Alcohol strength barely noticeable as warming, if at all.

Comments: This style represents the modern German beer served at Oktoberfest (although it is not solely reserved for Oktoberfest; it can be found at many other ‘fests’), and is sometimes called Wiesn (“the meadow” or local name for the Oktoberfest festival). We chose to call this style *Festbier* since by German and EU regulations, *Oktoberfestbier* is a protected appellation for beer produced at large breweries within the Munich city limits for consumption at Oktoberfest. Other countries are not bound by these rules, so many craft breweries in the US produce beer called Oktoberfest, but based on the traditional style described in these guidelines as *Märzen*. May be called Helles Märzen.

History: Since 1990, the majority of beer served at Oktoberfest in Munich has been this style. Export beer specifically made for the United States is still mainly of the traditional amber style, as are US-produced interpretations. Paulaner first created the golden version in the mid-1970s because they thought the traditional Oktoberfest was too filling. So they developed a lighter, more drinkable but still malty version that they wanted to be “more poundable” (according to the head brewer at Paulaner). But the actual type of beer served at Oktoberfest is set by a Munich city committee.

Characteristic Ingredients: Majority Pils malt, but with some Vienna or Munich malt to increase maltiness. Differences in commercial examples are mostly due to different maltsters and yeast, not major grist differences.

Style Comparison: Less intense and less richly toasted than a Märzen. Stronger than a Munich Helles, with a bit more body, and hop and malt flavor. Less rich in malt intensity than a Helles Bock. The malt complexity is similar to a higher-gravity Czech Premium Pale Lager, although without the associated hops.

Vital Statistics: OG: 1.054 – 1.057
IBUs: 18 – 25 FG: 1.010 – 1.012
SRM: 4 – 6 ABV: 5.8 – 6.3%

Commercial Examples: Augustiner Oktoberfest, Hacker-Pschorr Superior Festbier, Hofbräu Oktoberfestbier, Löwenbräu Oktoberfestbier, Paulaner Oktoberfest Bier, Weihenstephaner Festbier

Tags: standard-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pale-lager-family, malty

4C. Helles Bock

Overall Impression: A relatively pale, strong, malty German lager with a nicely attenuated finish that enhances drinkability. The hop character is generally more apparent and the malt character less deeply rich than in other Bocks.

Aroma: Moderate to strong grainy-sweet malt aroma, often with a lightly toasted quality and low Maillard products. Moderately-low spicy, herbal, or floral hop aroma optional. Clean fermentation profile. Low fruity esters optional. Very light alcohol optional.

Appearance: Deep gold to light amber in color. Bright to clear clarity. Large, creamy, persistent, white head.

Flavor: Moderately to moderately strong grainy-sweet, doughy, bready, or lightly toasty malt flavor dominates with some rich Maillard products providing added interest. Few caramel flavors optional. Low to moderate spicy, herbal, floral, peppery hop flavor optional, but present in the best examples. Moderate hop bitterness, more so in the balance than in other Bocks. Clean fermentation profile. Well-attenuated, not cloying, with a moderately-dry finish that may taste of both malt and hops.

Mouthfeel: Medium-bodied. Moderate to moderately-high carbonation. Smooth and clean with no harshness or astringency, despite the increased hop bitterness. Light alcohol warming optional.

Comments: Also known as Maibock. Compared to darker Bock beers, the hops compensate for the lower level of Maillard products in the balance.

History: A fairly recent development in comparison to the other members of the bock family. The serving of Maibock is a seasonal offering associated with springtime and the month of May, and may include a wider color and hopping range than is seen in exported products.

Characteristic Ingredients: A mix of Pils, Vienna, and Munich malts. No adjuncts. Light use of pale crystal type malts possible. Traditional German hops. Clean lager yeast. Decoction mash is traditional, but boiling is less than in Dunkles Bock to restrain color development. Soft water.

Style Comparison: Can be thought of as either a pale version of a Dunkles Bock, or a Munich Helles or Festbier brewed to bock strength. While quite malty, this beer typically has less dark and rich malt flavors, and can be drier, hoppier, and more bitter than a Dunkles Bock. Less strong than a pale Doppelbock, but with similar flavors.

Vital Statistics: OG: 1.064 – 1.072
IBUs: 23 – 35 FG: 1.011 – 1.018
SRM: 6 – 9 ABV: 6.3 – 7.4%

Commercial Examples: Altenmünster Maibock, Ayinger Maibock, Chuckanut Maibock, Einbecker Mai-Ur-Bock, Hofbräu Maibock, Mahr's Heller Bock

Tags: high-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, bock-family, malty

5. PALE BITTER EUROPEAN BEER

This category describes German-origin beers that are pale and have an even to bitter balance with a mild to moderately strong hoppy character featuring traditional German hops. They are generally bottom-fermented or are lagered to provide a smooth profile, and are well-attenuated as are most German beers.

5A. German Leichtbier

Overall Impression: A pale, highly-attenuated, light-bodied German lager with lower alcohol and calories than standard-strength beers. Moderately bitter with noticeable malt and hop flavors, the beer is still interesting to drink.

Aroma: Low to medium hop aroma, with a spicy, herbal, or floral character. Low to medium-low grainy-sweet or slightly crackery malt aroma. Clean fermentation profile.

Appearance: Pale straw to deep yellow in color. Brilliant clarity. Moderate white head with average to below average persistence.

Flavor: Low to medium grainy-sweet malt flavor initially. Medium hop bitterness. Low to medium hop flavor, with a spicy, herbal, or floral quality. Clean fermentation character, well-lagered. Dry finish with a light malty and hoppy aftertaste.

Mouthfeel: Light to very light body. Medium to high carbonation. Smooth, well-attenuated.

Comments: Marketed primarily as a diet-oriented beer with lower carbohydrates, alcohol, and calories. Pronounced “LYESHT-beer.” May also be known as a Diat Pils or Helles, this style is in the *schankbier* gravity class. Other variations of Leicht class beers can be made from Weissbier, Kölsch, and Altbier; those beers are best entered as 34B Mixed-Style Beer.

History: Traditional versions existed as drinks for physical laborers in factories or fields, but modern versions are more based on popular American products in the same class and targeted towards health or fitness conscious consumers. Increasingly supplanted in the current market by non-alcoholic beers and radlers.

Characteristic Ingredients: Continental Pils malt. German lager yeast. Traditional German hops.

Style Comparison: Like a lower-alcohol, lighter-bodied, slightly less aggressive German Pils or Munich Helles. More bitter and flavorful than an American Light Lager.

Vital Statistics:
OG: 1.026 – 1.034
IBUs: 15 – 28 FG: 1.006 – 1.010
SRM: 1.5 – 4 ABV: 2.4 – 3.6%

Commercial Examples: Autenrieder Schlossbräu Leicht, Greif Bräu Leicht, Hohenthanner Tannen Hell Leicht, Müllerbrau Heimer Leicht, Schönramer Surtaler Schankbier, Waldhaus Sommer Bier

Tags: session-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pale-lager-family, bitter, hoppy

5B. Kölsch

Overall Impression: A subtle, brilliantly clear, pale beer with a delicate balance of malt, fruit, and hop character, moderate bitterness, and a well-attenuated but soft finish. Freshness makes a huge difference with this beer, as the delicate character can fade quickly with age.

Aroma: Low to very low grainy-sweet malt aroma. A subtle fruit aroma (apple, pear, or sometimes cherry) is optional, but welcome. Low floral, spicy, or herbal hop aroma optional. The

intensity of aromatics is fairly subtle but generally balanced, clean, fresh, and pleasant.

Appearance: Medium yellow to light gold. Brilliant clarity. Has a delicate white head that may not persist.

Flavor: A delicate flavor balance between malt, fruitiness, bitterness, and hops, with a clean, well-attenuated finish. The medium to medium-low grainy maltiness may have very light bready or honey notes. The fruitiness can have an almost imperceptible sweetness. Medium-low to medium bitterness. Low to moderately-high floral, spicy, or herbal hop flavor; most are medium-low to medium. May have a neutral-grainy to light malty sweet impression at the start. Soft, rounded palate. Finish is soft, dry, and slightly crisp, not sharp or biting. No noticeable residual sweetness. While the balance between the flavor components can vary, none are ever strong.

Mouthfeel: Medium-light to medium body; most are medium-light. Medium to medium-high carbonation. Smooth and soft, but well-attenuated and not heavy. Not harsh.

Comments: A traditional top-fermented, lagered beer from Cologne, Germany (Köln). Köln breweries differentiate themselves through balance, so allow for a range of variation within the style when judging. Drier versions may seem hoppier or more bitter than the IBU levels might suggest. The delicate flavor profile does not age well, so be alert for oxidation defects. Served in Köln in a tall, narrow 20cl glass called a *Stange*.

History: Köln has a top-fermenting brewing tradition since the Middle Ages, but the beer now known as Kölsch was developed in the late 1800s as an alternative to pale lagers. Bottom fermentation was actually prohibited in Cologne. *Kölsch* is an appellation protected by the *Kölsch Konvention* (1986), and is restricted to breweries in and around Köln. The *Konvention* simply defines the beer as a “light, highly attenuated, hop-accentuated, clear, top-fermenting *Vollbier*.”

Characteristic Ingredients: Traditional German hops. German Pils, Pale, or Vienna malt. Attenuative, clean German ale yeast. Occasional small use of wheat malt. Current commercial practice is to ferment around 15 °C, cold condition near freezing for up to a month, and serve fresh.

Style Comparison: Can be mistaken for a Cream Ale or somewhat subtle German Pils.

Vital Statistics:
OG: 1.044 – 1.050
IBUs: 18 – 30 FG: 1.007 – 1.011
SRM: 3.5 – 5 ABV: 4.4 – 5.2%

Commercial Examples: Früh Kölsch, Gaffel Kölsch, Mühlen Kölsch, Paffgen Kolsch, Reissdorf Kölsch, Sion Kölsch, Süner Kölsch

Tags: standard-strength, pale-color, top-fermented, lagered, central-europe, traditional-style, pale-ale-family, balanced

5C. German Helles Exportbier

Overall Impression: A golden German lager balancing a smooth malty profile with a bitter, hoppy character in a slightly above-average body and strength beer.

Aroma: Medium-low to medium floral, spicy, or herbal hop aroma. Moderate grainy-sweet malt aroma, possibly with light toasty, bready, or doughy notes. Clean fermentation profile. Hops and malt both noticeable, and generally balanced.

Appearance: Medium yellow to deep gold. Clear. Persistent white head.

Flavor: Moderate, balanced malt and hops with supporting bitterness. Malt and hop flavors similar to aroma (same descriptors and intensities). Medium, noticeable bitterness, full on the palate, with a medium-dry finish. Clean fermentation character. Aftertaste of both malt and hops, generally in balance. Mineral character typically perceived more as a roundness and fullness of flavor, and a dry, flinty sharpness in the finish rather than overt mineral flavors. Background sulfate optional.

Mouthfeel: Medium to medium-full body. Medium carbonation. Smooth and mellow on the palate. Very slight warmth may be noted in stronger versions.

Comments: Also known Dortmund Export, Dortmund, Export, or simply a Dort. Called Export within Germany, and often Dortmund elsewhere, Export is also a beer strength descriptor under German brewing tradition, and could be applied to other styles. Splits the difference between a German Pils and a Munich Helles in several aspects: color, hop-malt balance, finish, bitterness.

History: Developed in Dortmund in the Ruhr industrial region in the 1870s in response to pale Pilsner-type beers. It became very popular after World War II but declined in the 1970s. Other Export-class beers developed independently, and reflected a slightly stronger version of existing beers.

Characteristic Ingredients: Minerally water with high levels of sulfates, carbonates, and chlorides. Traditional German or Czech hops. Pilsner malt. German lager yeast. Decoction mash traditional.

Style Comparison: Less finishing hops and more body than a German Pils. More bitter and drier than a Munich Helles. Stronger, drier, but less hoppy than a Czech Premium Pale Lager.

Vital Statistics:

OG:	1.050 – 1.058
IBUs: 20 – 30	FG: 1.008 – 1.015
SRM: 4 – 6	ABV: 5.0 – 6.0%

Commercial Examples: Chuckanut Export Dortmund Lager, DAB Dortmund Export, Dortmund Kronen, Landshuter Edel Hell, Müllerbräu Export Gold, Schönramer Gold

Tags: standard-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pale-lager-family, balanced

5D. German Pils

Overall Impression: A pale, dry, bitter German lager featuring a prominent hop aroma. Crisp, clean, and refreshing, showing a brilliant gold color with excellent head retention.

Aroma: Moderately to moderately-high flowery, spicy, or herbal hops. Low to medium grainy, sweet, or doughy malt character, often with a light honey and toasted cracker quality. Clean fermentation profile. The hops should be forward, but not totally dominate the malt in the balance.

Appearance: Straw to deep yellow, brilliant to very clear, with a creamy, long-lasting white head.

Flavor: Initial malt flavor quickly overcome with hop flavor and bitterness, leading into a dry, crisp finish. Malt and hop flavors similar to aroma (same descriptors and intensities). Medium to high bitterness, lingering into the aftertaste along with a touch of malt and hops. Clean fermentation profile. Minerally water can accentuate and lengthen the dry finish. Hops and malt can fade with age, but the beer should always have a bitter balance.

Mouthfeel: Medium-light body. Medium to high carbonation. Should not feel heavy. Not harsh, but may have a flinty, minerally, sharpness in some examples.

Comments: Modern examples of Pils tend to become paler in color, drier and sharper in finish, and more bitter moving from South to North in Germany, often mirroring increasing sulfates in the water. Pils found in Bavaria tend to be a bit softer in bitterness with more malt flavor and late hop character, yet still with sufficient hops and crispness of finish to differentiate itself from Munich Helles. The use of the term 'Pils' is more common in Germany than 'Pilsner' to differentiate it from the Czech style, and (some say) to show respect.

History: Adapted from Czech Pilsner to suit brewing conditions in Germany, particularly water with higher mineral content and domestic hop varieties. First brewed in Germany in the early 1870s. Became more popular after WWII as German brewing schools emphasized modern techniques. Along with its cousin Czech Pilsner, it is the ancestor of the most widely produced beer styles today.

Characteristic Ingredients: Continental Pilsner malt. Traditional German hops. Clean German lager yeast.

Style Comparison: Lighter in body and color, drier, crisper, more fully attenuated, more lingering bitterness, and higher carbonation than a Czech Premium Pale Lager. More hop character, malt flavor, and bitterness than International Pale Lager. More hop character and bitterness with a drier, crisper finish than a Munich Helles; the Helles has more malt intensity, but of the same character as the German Pils.

Vital Statistics:

OG:	1.044 – 1.050
IBUs: 22 – 40	FG: 1.008 – 1.013
SRM: 2 – 4	ABV: 4.4 – 5.2%

Commercial Examples: ABK Pils Anno 1907, Jever Pilsener, König Pilsener, Paulaner Pils, Bierstadt Slow-Pour Pils, Rothaus Pils, Schönramer Pils, Trumer Pils

Tags: standard-strength, pale-color, bottom-fermented, lagered, central-europe, traditional-style, pilsner-family, bitter, hoppy

6. AMBER MALTY EUROPEAN LAGER

This category groups amber-colored, German-origin, bottom-fermented lagerbiers that have a malty balance and are vollbier to starkbier in strength.

6A. Märzen

Overall Impression: An amber, malty German lager with a clean, rich, toasty, bready malt flavor, restrained bitterness, and a well-attenuated finish. The overall malt impression is soft, elegant, and complex, with a rich malty aftertaste that is never cloying or heavy.

Aroma: Moderate malty aroma, typically rich, bready, somewhat toasty, with light bread crust notes. Clean lager fermentation character. Very low floral, herbal, or spicy hop aroma optional. Caramel-sweet, biscuity-dry, or roasted malt aromas are inappropriate. Very light alcohol might be detected, but should never be sharp. Clean, elegant malt richness should be the primary aroma.

Appearance: Amber-orange to deep reddish-copper color; should not be golden. Bright clarity, with persistent, off-white foam stand.

Flavor: Moderate to high rich malt flavor often initially suggests sweetness, but the finish is moderately-dry to dry. Distinctive and complex maltiness often includes a bready, toasty aspect. Hop bitterness is moderate, and the floral, herbal, or spicy hop flavor is low to none. Hops provide sufficient balance that the malty palate and finish do not seem sweet. The aftertaste is malty, with the same elegant, rich malt flavors lingering. Noticeable sweet caramel, dry biscuit, or roasted flavors are inappropriate. Clean fermentation profile.

Mouthfeel: Medium body, with a smooth, creamy texture that often suggests a fuller mouthfeel. Medium carbonation. Fully attenuated, without a sweet or cloying impression. May be slightly warming, but the strength should be relatively hidden.

Comments: Modern domestic German Oktoberfest versions are golden – see the Festbier style for this version. Export German versions (to the United States, at least) are typically orange-amber in color, have a distinctive toasty malt character, and are often labeled *Oktoberfest*. Many craft versions of Oktoberfest are based on this style. Historic versions of the beer tended to be darker, towards the brown color range, but there have been many ‘shades’ of Märzen (when the name is used as a strength); this style description specifically refers to the stronger amber lager version. The modern Festbier can be thought of as a lighter-bodied, pale Märzen by these terms.

History: As the name suggests, brewed as a stronger “March beer” in March and lagered in cold caves over the summer. Modern versions trace back to the lager developed by Spaten in 1841, contemporaneous to the development of Vienna lager. However, the Märzen name is much older than 1841 – the early ones were dark brown, and the name implied a strength band (14 °P) rather than a style. The amber lager style served at Oktoberfest from 1872 until 1990 when the golden Festbier was adopted as the standard festival beer.

Characteristic Ingredients: Grist varies, although traditional German versions emphasized Munich malt. The notion of elegance is derived from the finest quality ingredients, particularly the base malts. A decoction mash is traditional, and enhances the rich malt profile.

Style Comparison: Not as strong and rich as a Dunkles Bock. More malt depth and richness than a Festbier, with a heavier body and slightly less hops. Less hoppy but equally malty as a Czech Amber Lager, but with a different malt profile.

Vital Statistics: OG: 1.054 – 1.060
IBUs: 18 – 24 FG: 1.010 – 1.014
SRM: 8 – 17 ABV: 5.6 – 6.3%

Commercial Examples: Hacker-Pschorr Oktoberfest Märzen, Hofmark Märzen, Paulaner Oktoberfest, Saalfelder Ur-Saalfelder, Weltenburger Kloster Anno 1050

Tags: standard-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, amber-lager-family, malty

6B. Rauchbier

Overall Impression: A beechwood-smoked, malty, amber German lager. The expected Märzen profile of toasty-rich malt, restrained bitterness, clean fermentation, and a relatively dry finish is enhanced by a noticeable to intense smoke character.

Aroma: Blend of smoke and malt, varying in balance and intensity. The beechwood smoke character can range from subtle to fairly strong, and can seem smoky, woody, or bacon-like. The malt character can be low to moderate, and be somewhat rich, toasty, or malty-sweet. The malt and smoke components are often inversely proportional (i.e., when smoke increases, malt decreases, and vice versa). Low floral or spicy hop aroma optional. Clean fermentation profile.

Appearance: Very clear, with a large, creamy, rich, tan- to cream-colored head. Deep amber to coppery-brown in color, often a little darker than the underlying Märzen style.

Flavor: Generally follows the aroma profile, with a blend of smoke and malt in varying balance and intensity, yet always mutually supportive. Märzen-like qualities should be evident, particularly a malty, toasty richness, but the beechwood smoke flavor can be low to high. The palate can be somewhat malty, rich, and sweet, yet the finish tends to be medium-dry to dry with the smoke character sometimes enhancing the dryness of the finish. The aftertaste can reflect both malt richness and smoke flavors, with a balanced presentation desirable. Moderate, balanced, hop bitterness. Can have up to a moderate hop flavor with spicy, floral, or herbal notes. Clean lager fermentation character.

The quality and character of the smoke is important; it should be cleanly smoky. At higher levels, the smoke can take on a ham- or bacon-like character, which is acceptable as long as it doesn't veer into the greasy range. Harsh, bitter, burnt, acrid, charred, rubbery, sulfury, or creosote-like smoky-phenolic flavors are inappropriate.

Mouthfeel: Medium body. Medium to medium-high carbonation. Smooth lager character. Significant astringent, phenolic harshness is inappropriate.

Comments: Literally *smoke beer* in German. The smoke character and intensity varies by maltster and brewery, so allow for variation in the style when judging – not all examples are highly smoked. Many other traditional German styles are smoked; those should be entered in the 32A Classic Style Smoked Beer style. This style is only for the more common Märzen-based beer.

History: A historical specialty of the city of Bamberg, in the Franconian region of Bavaria in Germany. While smoked beers certainly were made long ago, the origins of this specific style

are unclear but must have been developed after Märzen was created.

Characteristic Ingredients: Märzen-type grist, with the addition of a sizeable quantity of German Rauchmalz (beechwood-smoked Vienna-type malt). Some breweries smoke their own malt. German lager yeast. Traditional German or Czech hops.

Style Comparison: Like a Märzen with but with a balanced, sweet, smoky aroma and flavor and a somewhat darker color.

Vital Statistics: OG: 1.050 – 1.057
IBUs: 20 – 30 FG: 1.012 – 1.016
SRM: 12 – 22 ABV: 4.8 – 6%

Commercial Examples: Cervejaria Bamberg Rauchbier, Göller Rauchbier, Rittmayer Rauchbier, Schlenkerla Rauchbier Märzen, Spezial Rauchbier Märzen

Tags: standard-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, amber-lager-family, malty, smoke

6C. Dunkles Bock

Overall Impression: A strong, dark, malty German lager beer that emphasizes the malty-rich and somewhat toasty qualities of continental malts without being sweet in the finish.

Aroma: Medium to medium-high rich bready-malty aroma, often with moderate amounts of rich Maillard products or toasty overtones. Virtually no hop aroma. Some alcohol may be noticeable. Clean lager character, although a slight dark fruit character is allowable.

Appearance: Light copper to brown color, often with attractive garnet highlights. Good clarity despite the dark color. Large, creamy, persistent, off-white head.

Flavor: Medium to medium-high complex, rich maltiness is dominated by toasty-rich Maillard products. Some dark caramel notes may be present. Hop bitterness is generally only

high enough to support the malt flavors, allowing a bit of malty sweetness to linger into the finish. Well-attenuated, not cloying. Clean fermentation profile, although the malt can provide a slight dark fruit character. No hop flavor. No roasted, burnt, or dry biscuity character.

Mouthfeel: Medium to medium-full bodied. Moderate to moderately low carbonation. Some alcohol warmth may be found, but should never be hot. Smooth, without harshness or astringency.

Comments: Decoction mashing plays an important part of flavor development, as it enhances the caramel and Maillard flavor aspects of the malt.

History: Originated in the Northern German city of Einbeck, which was a brewing center and popular exporter in the days of the Hanseatic League (14th to 17th century). Recreated in Munich starting in the 17th century. “Bock” translates to “Ram” in German, which is why the animal is often used in logos and advertisements.

Characteristic Ingredients: Munich and Vienna malts, rarely a tiny bit of dark roasted malts for color adjustment, never any non-malt adjuncts. Continental European hop varieties are used. Clean German lager yeast.

Style Comparison: Darker, with a richer malty flavor and less apparent bitterness than a Helles Bock. Less alcohol and malty richness than a Doppelbock. Stronger malt flavors and higher alcohol than a Märzen. Richer, less attenuated, and less hoppy than a Czech Amber Lager.

Vital Statistics: OG: 1.064 – 1.072
IBUs: 20 – 27 FG: 1.013 – 1.019
SRM: 14 – 22 ABV: 6.3 – 7.2%

Commercial Examples: Aass Bock, Einbecker Ur-Bock Dunkel, Kneitingen Bock, Lindeboom Bock, Schell’s Bock, Penn Brewery St. Nikolaus Bock

Tags: high-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, bock-family, malty

7. AMBER BITTER EUROPEAN BEER

This category groups amber-colored, evenly balanced to bitter balanced beers of German or Austrian origin.

7A. Vienna Lager

Overall Impression: A moderate-strength continental amber lager with a soft, smooth maltiness and a balanced, moderate bitterness, yet finishing relatively dry. The malt flavor is clean, bready-rich, and somewhat toasty, with an elegant impression derived from quality base malts and process, not specialty malts or adjuncts.

Aroma: Moderately-intense malt aroma, with toasty and malty-rich accents. Floral, spicy hop aroma may be low to none. Clean lager character. A significant caramel, biscuity, or roasted aroma is inappropriate.

Appearance: Light reddish amber to copper color. Bright clarity. Large, off-white, persistent head.

Flavor: Soft, elegant malt complexity is in the forefront, with a firm enough hop bitterness to provide a balanced finish. The malt flavor tends towards a rich, toasty character, without significant caramel, biscuity, or roast flavors. Fairly dry, soft finish, with both rich malt and hop bitterness present in the aftertaste. Floral, spicy, or herbal hop flavor may be low to none. Clean fermentation profile.

Mouthfeel: Medium-light to medium body, with a gentle creaminess. Moderate carbonation. Smooth.

Comments: A standard-strength everyday beer, not a beer brewed for festivals. Many traditional examples have become sweeter and more adjunct-laden, now seeming more like International Amber or Dark Lagers.

History: Developed by Anton Dreher in Vienna in 1841, became popular in the mid-late 1800s. The style was brought to Mexico by Santiago Graf and other Austrian immigrant brewers in the late 1800s. Seems to be embraced as a modern craft style in other countries.

Characteristic Ingredients: Traditionally, best-quality Vienna malt, but can also use Pils and Munich malts. Traditional continental hops. Clean German lager yeast. May use small amounts of specialty malts for color and sweetness.

Style Comparison: Similar malt flavor as a Märzen, but lighter in intensity, and body, with a touch more bitterness and dryness in the balance. Lower in alcohol than Märzen or Festbier. Less rich, malty, and hoppy than Czech Amber Lager.

Vital Statistics:
OG: 1.048 – 1.055
IBUs: 18 – 30
SRM: 9 – 15
FG: 1.010 – 1.014
ABV: 4.7 – 5.5%

Commercial Examples: Chuckanut Vienna Lager, Devils Backbone Vienna Lager, Figueroa Mountain Red Lager, Heavy Seas Cutlass, Ottakringer Wiener Original, Schell's Firebrick, Theresianer Vienna

Tags: standard-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, amber-lager-family, balanced

7B. Altbier

A cold-conditioned, top-fermenting beer from Düsseldorf that has a cleaner and smoother palate than is typical for most ales. "Alt" refers to the "old" style of brewing (using top-fermenting yeast) that was common before bottom-fermenting lager brewing became popular.

Overall Impression: A moderately colored, well-attenuated, bitter beer with a rich maltiness balancing a strong bitterness. Light and spicy hop character complements the malt. A dry beer with a firm body and smooth palate.

Aroma: Malty and rich with grainy characteristics like baked bread or nutty, toasted bread crusts. Should not have darker roasted or chocolate notes. Malt intensity is moderate to moderately-high. Moderate to low hops complement but do not dominate the malt, and often have a spicy, peppery, or floral character. Fermentation character is very clean. Low to medium-low esters optional.

Appearance: The color ranges from amber to deep copper, stopping short of brown; bronze-orange is most common. Brilliant clarity. Thick, creamy, long-lasting off-white head.

Flavor: Malt profile similar to the aroma, with an assertive, medium to high hop bitterness balancing the rich malty flavors. The beer finishes medium-dry to dry with a grainy, bitter, malty-rich aftertaste. The finish is long-lasting, sometimes with a nutty or bittersweet impression. The apparent bitterness level is sometimes masked by the malt character if the beer is not very dry, but the bitterness tends to scale with the malt richness to maintain balance. No roast. No harshness. Clean fermentation profile. Light fruity esters, especially dark fruit, may be present. Medium to low spicy, peppery, or floral hop flavor. Light mineral character optional.

Mouthfeel: Medium body. Smooth. Medium to medium-high carbonation. Astringency low to none.

Comments: Classic, traditional examples in the Altstadt ("old town") section of Düsseldorf are served from casks. Most examples have a balanced (25-35 IBU) bitterness, not the aggressive hop character of the well-known Zum Uerige. Stronger *sticke* and *doppelsticke* beers should be entered in the 27 Historical Beer style instead.

History: Developed in the late 19th century in Düsseldorf to use lager techniques to compete with lager. Older German styles were brewed in the area but there is no linkage to modern Altbier.

Characteristic Ingredients: Grists vary, but usually consist of German base malts (usually Pils, sometimes Munich) with small amounts of crystal, chocolate, or black malts. May include some wheat, including roasted wheat. Spalt hops are traditional, but other traditional German or Czech hops can be used. Clean, highly attenuative ale yeast. A step mash program is traditional. Fermented at cool ale temperatures, then cold conditioned.

Style Comparison: More bitter and malty than International Amber Lagers. Somewhat similar to California Common, both in production technique and finished flavor and color, though not in ingredients. Less alcohol, less malty richness, and more bitterness than a Dunkles Bock. Drier, richer, and more bitter than a Vienna Lager.

Vital Statistics:
OG: 1.044 – 1.052
IBUs: 25 – 50
SRM: 9 – 17
FG: 1.008 – 1.014
ABV: 4.3 – 5.5%

Commercial Examples: Bolten Alt, Diebels Alt, Füchschen Alt, Original Schlüssel Alt, Schlösser Alt, Schumacher Alt, Uerige Altbier

Tags: standard-strength, amber-color, top-fermented, lagered, central-europe, traditional-style, amber-ale-family, bitter

8. DARK EUROPEAN LAGER

This category contains German vollbier lagers darker than amber-brown color.

8A. Munich Dunkel

Overall Impression: A traditional malty brown lager from Bavaria. Deeply toasted, bready malt flavors without any roasty or burnt flavors. Smooth and rich, with a restrained bitterness and a relatively dry finish that allows for drinking in quantity.

Aroma: Moderate to high malt richness, like toasted bread crusts with hints of chocolate, nuts, caramel, or toffee. Fresh traditional versions often show higher levels of chocolate. The malt character is more malty-rich than sugary or caramelly sweet. Clean fermentation profile. A light spicy, floral, or herbal hop aroma is optional.

Appearance: Deep copper to dark brown, often with a red or garnet tint. Creamy, light to medium tan head. Usually clear.

Flavor: Rich malt flavors similar to aroma (same malt descriptors apply), medium to high. Restrained bitterness, medium-low to medium, giving an overall malty balance. Malty and soft on the palate without being overly sweet, and medium-dry in the finish with a malty aftertaste. No roast, burnt, or bitter malt flavors, toasted flavors shouldn't have a harsh grainy dryness, and caramel flavors should not be sweet. Low spicy, herbal, or floral hop flavor optional. Clean fermentation profile.

Mouthfeel: Medium to medium-full body, providing a soft and dextrinous mouthfeel without being heavy or cloying. Moderate carbonation. Smooth lager character. No harsh or biting astringency. Not warming.

Comments: A traditional Munich style, the dark companion to Helles. Franconian versions are more bitter than ones from Munich.

History: Developed at Spaten in the 1830s after the development of Munich malt, and seen as a successor to dark regional beers of the time. While originating in Munich, the style became popular throughout Bavaria (especially Franconia).

Characteristic Ingredients: Traditionally, Munich malts, but Pils and Vienna can be used too. Light use of specialty malts for color and depth. Decoction mash traditional. German hops and lager yeast.

Style Comparison: Not as intense in maltiness or as strong as a Dunkles Bock. Lacking the more roasted flavors and often the hop bitterness of a Schwarzbier. Richer, more malt-centric, and less hoppy than a Czech Dark Lager.

Vital Statistics: OG: 1.048 – 1.056
IBUs: 18 – 28 FG: 1.010 – 1.016
SRM: 17 – 28 ABV: 4.5 – 5.6%

Commercial Examples: Ayinger Albairisch Dunkel, Ettaler Kloster-Dunkel, Eitinger Urtyp Dunkel, Hacker-Pschorr Münchner Dunkel, Hofbräuhaus Dunkel, Weltenburger Kloster Barock-Dunkel

Tags: standard-strength, dark-color, bottom-fermented, lagered, central-europe, traditional-style, malty, dark-lager-family

8B. Schwarzbier

Overall Impression: A dark German lager that balances roasted yet smooth malt flavors with moderate hop bitterness. The lighter body, dryness, and lack of a harsh, burnt, or heavy aftertaste helps make this beer quite drinkable.

Aroma: Low to moderate malt, with low aromatic malty sweetness and hints of roast malt often apparent. The malt can be clean and neutral or moderately rich and bready, and may have a hint of dark caramel. The roast character can be somewhat dark chocolate- or coffee-like but should never be burnt. A moderately low spicy, floral, or herbal hop aroma is optional. Clean lager yeast character.

Appearance: Medium to very dark brown in color, often with deep ruby to garnet highlights, yet almost never truly black. Very clear. Large, persistent, tan-colored head.

Flavor: Light to moderate malt flavor, which can have a clean, neutral character to a moderately rich, bread-malty quality. Light to moderate roasted malt flavors can give a bitter-chocolate palate that is never burnt. Medium-low to medium bitterness. Light to moderate spicy, floral, or herbal hop flavor. Clean lager character. Dry finish. Some residual sweetness is acceptable but not traditional. Aftertaste of hop bitterness with a complementary but subtle roastiness in the background.

Mouthfeel: Medium-light to medium body. Moderate to moderately-high carbonation. Smooth. No harshness or astringency, despite the use of dark, roasted malts.

Comments: Literally means *black beer* in German. While sometimes called a “black Pils,” the beer is rarely as dark as black or as hop-forward and bitter as a Pils. Strongly roasted, Porter-like flavors are a flaw.

History: A regional specialty from Thuringia, Saxony, and Franconia in Germany. Served as the inspiration for black lagers brewed in Japan. Popularity grew after German reunification in 1990.

Characteristic Ingredients: German Munich malt and Pilsner malts for the base, with huskless dark roasted malts that add roast flavors without burnt flavors. German hop varieties and clean German lager yeasts are traditional.

Style Comparison: In comparison with a Munich Dunkel, usually darker in color, drier on the palate, lighter in body, and with a noticeable (but not high) roasted malt edge to balance the malt base. Should not taste like an American Porter made with lager yeast. Drier, less malty, with less hop character than a Czech Dark Lager.

Vital Statistics: OG: 1.046 – 1.052
IBUs: 20 – 35 FG: 1.010 – 1.016
SRM: 19 – 30 ABV: 4.4 – 5.4%

Commercial Examples: Chuckanut Schwarz Lager, Devils Backbone Schwarz Bier, Köstritzer Schwarzbier, Kulmbacher Mönchshof Schwarzbier, Nuezeller Original Badebier, pFriem Schwarzbier

Tags: standard-strength, dark-color, bottom-fermented, lagered, central-europe, traditional-style, balanced, dark-lager-family

9. STRONG EUROPEAN BEER

This category contains more strongly flavored and higher alcohol lagers from Germany and the Baltic region. Most are dark, but some pale versions are known.

9A. Doppelbock

Overall Impression: A strong, rich, and very malty German lager that can have both pale and dark variants. The darker versions have more richly-developed, deeper malt flavors, while the paler versions have slightly more hops and dryness.

Aroma: Very strong maltiness, possibly with light caramel notes, and up to a moderate alcohol aroma. Virtually no hop aroma.

Dark versions have significant, rich Maillard products, deeply toasted malt, and possibly a slight chocolate-like aroma that should never be roasted or burnt. Moderately-low dark fruit, like plums, dark grapes, or fruit leather, is allowable.

Pale versions have a rich and strong, often toasty, malt presence, possibly with a light floral, spicy, or herbal hop accent.

Appearance: Good clarity, with a large, creamy, persistent head.

Dark versions are copper to dark brown in color, often with ruby highlights, and an off-white head.

Pale versions are deep gold to light amber in color, with a white head.

Flavor: Very rich and malty. Hop bitterness varies from moderate to moderately low but always allows malt to dominate the flavor. Faint hop flavor optional. Most examples are fairly malty-sweet on the palate, but should have an impression of attenuation in the finish. The impression of sweetness comes from low hopping, not from incomplete fermentation. Clean fermentation profile.

Dark versions have malt and ester flavors similar to the aroma (same descriptors and intensities).

Pale versions have a strong bready and toasty malt flavor, a light floral, spicy, or herbal hop flavor, and a drier finish.

Mouthfeel: Medium-full to full body. Moderate to moderately-low carbonation. Very smooth without harshness, astringency. A light alcohol warmth may be noted, but it should never burn.

Comments: Doppelbock means *double bock*. Most versions are dark colored and may display the caramelizing and Maillard products of decoction mashing, but excellent pale versions also exist. The pale versions will not have the same richness and darker malt and fruit flavors of the dark versions, and may be a bit drier, hoppier, and more bitter. While most traditional examples are in the lower end of the ranges cited, the style can be considered to have no upper limit for gravity and alcohol, provided the balance remains the same.

History: A Bavarian specialty originating in Munich, first made by the monks of St. Francis of Paula by the 1700s. Historical versions were less well-attenuated than modern interpretations, thus with higher sweetness and lower alcohol levels. Was called “liquid bread” by monks, and consumed during the Lenten fast. Breweries adopted beer names ending in “-ator” after a 19th century court ruling that no one but Paulaner was allowed to use the name Salvator. Traditionally dark brown in color; paler examples are a more recent development.

Characteristic Ingredients: Pils, Vienna, Munich malts. Occasionally dark malt for color adjustment. Traditional

German hops. Clean German lager yeast. Decoction mashing is traditional.

Style Comparison: A stronger, richer, more full-bodied version of either a Dunkles Bock or a Helles Bock. Pale versions will show higher attenuation and less dark fruity character than the darker versions.

Entry Instructions: The entrant will specify whether the entry is a **pale** or a **dark** variant.

Vital Statistics: OG: 1.072 – 1.112
IBUs: 16 – 26 FG: 1.016 – 1.024
SRM: 6 – 25 ABV: 7.0 – 10.0%

Commercial Examples: Dark Versions – Andechs Doppelbock Dunkel, Ayinger Celebrator, Paulaner Salvator, Spaten Optimator, Tröegs Troegenator, Weihenstephaner Korbinian; **Pale Versions** – Eggenberg Urbock 23°, Meinel Doppelbock Hell, Plank Bavarian Heller Doppelbock, Riegele Auris 19, Schönbuch Doppelbock Hell, Staffelberg-Bräu Zwergator

Tags: high-strength, amber-color, pale-color, bottom-fermented, lagered, central-europe, traditional-style, bock-family, malty

9B. Eisbock

Overall Impression: A strong, full-bodied, rich, and malty dark German lager often with a viscous quality and strong flavors. Even though flavors are concentrated, the alcohol should be smooth and warming, not burning.

Aroma: Dominated by rich, intense malt and a definite alcohol presence. The malt can have bready, toasty, qualities, with some caramel or faint chocolate, often with dark fruit notes like plums or grapes. No hop aroma. Alcohol aromas should not be harsh or solventy. Clean fermentation profile.

Appearance: Deep copper to dark brown in color, often with attractive ruby highlights. Good clarity. Head retention may be moderate to poor. Off-white to deep ivory colored head. Pronounced legs are often evident.

Flavor: Rich, sweet malt balanced by a significant alcohol presence. The malt can have Maillard products, toasty qualities, some caramel, and occasionally a slight chocolate flavor. May have significant malt-derived dark fruit esters. Hop bitterness just offsets the malt sweetness enough to avoid a cloying character. No hop flavor. Alcohol helps balance the strong malt presence. The finish should be of rich malt with a certain dryness from the alcohol. It should not be sticky, syrupy, or cloyingly sweet. Clean fermentation profile.

Mouthfeel: Full to very full-bodied. Low carbonation. Significant alcohol warmth without sharp hotness. Very smooth and silky without harsh edges from alcohol, bitterness, fusels, or other concentrated flavors.

Comments: Extended lagering is often needed post-freezing to smooth the alcohol and enhance the malt and alcohol balance. Pronounced “ICE-bock.”

History: Originating in Kulmbach in Franconia in the late 1800s, although exact origins are not known. Fables describe it as coming from beer accidentally freezing at a brewery.

Characteristic Ingredients: Same as Doppelbock. Produced by freezing a doppelbock-like beer and removing ice (“freeze

distillation”), thus concentrating flavor and alcohol, as well as any defects present. Commercial eisbocks are generally concentrated anywhere from 7% to 33% by volume.

Style Comparison: Eisbocks are not simply stronger Doppelbocks; the name refers to the process of freezing and concentrating the beer, and is *not* a statement on alcohol; some Doppelbocks are stronger than Eisbocks. Not as thick, rich, or sweet as a Wheatwine.

Vital Statistics: OG: 1.078 – 1.120
IBUs: 25 – 35 FG: 1.020 – 1.035
SRM: 17 – 30 ABV: 9.0 – 14.0%

Commercial Examples: Kulmbacher Eisbock

Tags: very-high-strength, amber-color, bottom-fermented, lagered, central-europe, traditional-style, bock-family, malty

9C. Baltic Porter

Overall Impression: A strong, dark, malty beer with different interpretations within the Baltic region. Smooth, warming, and richly malty, with complex dark fruit flavors and a roasted flavor without burnt notes.

Aroma: Rich maltiness often containing caramel, toffee, nuts, deep toast, or licorice notes. Complex alcohol and ester profile of moderate strength, and reminiscent of plums, prunes, raisins, cherries, or currants, occasionally with a vinous Port-like quality. Deep malt accents of dark chocolate, coffee, or molasses, but never burnt. No hops. No sourness. Smooth, not sharp, impression.

Appearance: Dark reddish-copper to opaque dark brown color, but not black. Thick, persistent tan-colored head. Clear, although darker versions can be opaque.

Flavor: As with aroma, has a rich maltiness with a complex blend of deep malt, dried fruit esters, and alcohol. The malt can have a caramel, toffee, nutty, molasses, or licorice complexity. Prominent yet smooth Schwarzbier-like roasted flavor that stops short of burnt. Light hints of black currants and dark dried fruits. Smooth palate and full finish. Starts malty-sweet but darker malt flavors quickly dominate and persist through the dryish finish, leaving a hint of roast coffee or licorice and dried fruit in the aftertaste. Medium-low to medium bitterness, just to provide balance and prevent it from seeming cloying.

Hop flavor from slightly spicy hops ranges from none to medium-low. Clean fermentation profile.

Mouthfeel: Generally quite full-bodied and smooth, with a well-aged alcohol warmth that can be deceptive. Medium to medium-high carbonation, making it seem even more mouth-filling. Not heavy on the tongue due to carbonation level.

Comments: Most commercial versions are in the 7–8.5% ABV range. The best examples have a deceptive strength that makes them dangerously easy to drink. The character of these beers varies by country of origin, so be careful about generalizing based on a single example. Some beers are truer to their English roots, while others are more of the style first popularized in Poland.

History: Developed indigenously (and independently) in several countries bordering the Baltic Sea after import of popular English porters and stouts was interrupted in the early 1800s. Historically top-fermented, many breweries adapted the recipes for bottom-fermenting yeast along with the rest of their production. The name *Baltic Porter* is recent (since the 1990s) and describes the modern collection of beers with a somewhat similar profile from these countries, not historical versions.

Characteristic Ingredients: Generally lager yeast (cold fermented if using ale yeast, as is required when brewed in Russia). Debittered dark malt. Munich or Vienna base malt. Continental hops. May contain crystal malts or adjuncts. Brown or amber malt common in historical recipes. As a collection of regional beers, different formulations are expected.

Style Comparison: Combines the body, maltiness, richness, and smoothness of a Doppelbock, the darker malt character of an English Porter, the roast flavors of a Schwarzbier, and alcohol and fruitiness of an Old Ale. Much less roasted and often lower in alcohol than an Imperial Stout.

Vital Statistics: OG: 1.060 – 1.090
IBUs: 20 – 40 FG: 1.016 – 1.024
SRM: 17 – 30 ABV: 6.5 – 9.5%

Commercial Examples: Aldaris Mežpils Porteris, Baltika 6 Porter, Devils Backbone Danzig, Okocim Mistrzowski Porter, Sinebrychoff Porter, Zywiec Porter

Tags: high-strength, dark-color, any-fermentation, lagered, eastern-europe, traditional-style, porter-family, malty

10. GERMAN WHEAT BEER

This category contains *vollbier-* and *starkbier-*strength German wheat beers without sourness, in light and dark colors.

10A. Weissbier

Overall Impression: A pale, refreshing, lightly-hopped German wheat beer with high carbonation, dry finish, fluffy mouthfeel, and a distinctive banana-and-clove weizen yeast fermentation profile.

Aroma: Moderate to strong esters and phenols, typically banana and clove, often well balanced and typically stronger than the malt. Light to moderate bready, doughy, or grainy wheat aroma. Light vanilla optional. Light floral, spicy, or herbal hops optional. Bubblegum (strawberry with banana), sourness, or smoke are faults.

Appearance: Pale straw to gold in color. Very thick, moussy, long-lasting white head. Can be hazy and have a shine from wheat and yeast, although this can settle out in bottles.

Flavor: Low to moderately strong banana and clove flavor, often well balanced. Low to moderate soft, somewhat bready, doughy, or grainy wheat flavor supported by the slight Pils malt grainy sweetness. Very low to moderately low bitterness. Well-rounded, flavorful palate with a relatively dry finish. Light vanilla optional. Very low floral, spicy, or herbal hop flavor optional. Any impression of sweetness is due more to low bitterness than any residual sweetness; a sweet or heavy finish impairs drinkability. Bubblegum, sourness, or smoke are faults. While the banana-and-clove profile is important, it should not be so strong as to be extreme and unbalanced.

Mouthfeel: Medium-light to medium body; never heavy. Fluffy, creamy fullness progressing to a light, spritzzy finish aided by high to very high carbonation. Effervescent.

Comments: Also known as *hefeweizen* or *weizenbier*, particularly outside Bavaria. These beers are best enjoyed while young and fresh, as they often don't age well. In Germany, lower-alcohol light (*leicht*) and non-alcoholic versions are popular. *Kristall* versions are filtered for brilliant clarity.

History: While Bavaria has a wheat beer tradition dating back before the 1500s, brewing wheat beer used to be a monopoly reserved for Bavarian royalty. Modern Weissbier dates from 1872 when Schneider began production of its amber version. However, pale Weissbier only became popular since the 1960s (although the name historically could be used in Germany to describe beer made from air-dried malt, a different tradition). It is quite popular today, particularly in southern Germany.

Characteristic Ingredients: Malted wheat, at least half the grist. Pilsner malt. Decoction mash traditional. Weizen yeast, cool fermentation temperatures.

Style Comparison: Compared to American Wheat, has a banana and clove yeast character and less bitterness. Compared to a Dunkles Weissbier, has a paler color and less malt richness and flavor.

Entry Instructions: The entrant may specify whether the yeast should be roused before serving.

Vital Statistics: OG: 1.044 – 1.053
IBUs: 8 – 15 FG: 1.008 – 1.014
SRM: 2 – 6 ABV: 4.3 – 5.6%

Commercial Examples: Ayinger Bräuweisse, Distelhäuser Hell Weizen, Hacker-Pschorr Hefeweißbier, Hofbräuhaus Münchner Weisse, Schneider Weisse Original Weissbier, Weißenstephaner Hefeweißbier

Tags: standard-strength, pale-color, top-fermented, central-europe, traditional-style, wheat-beer-family, malty

10B. Dunkles Weissbier

Overall Impression: A moderately dark German wheat beer with a distinctive banana-and-clove weizen yeast fermentation profile, supported by a toasted bread or caramel malt flavor. Highly carbonated and refreshing, with a creamy, fluffy texture and light finish.

Aroma: Moderate esters and phenols, typically banana and clove, often well balanced with each other and with the malt. Light to moderate bready, doughy, or grainy wheat aroma, often accompanied by caramel, bread crust, or richer malt notes. Low to moderate vanilla optional. Light floral, spicy, or herbal hops optional. Bubblegum (strawberry with banana), sourness, or smoke are faults.

Appearance: Light copper to dark, mahogany brown in color. Very thick, moussy, long-lasting off-white head. Can be hazy and have a shine from wheat and yeast, although this can settle out in bottled versions.

Flavor: Low to moderately strong banana and clove flavor, often well balanced with each other and with the malt, although the malt may sometimes mask the clove impression. Low to medium-high soft, somewhat bready, doughy, or grainy wheat flavor with richer caramel, toast, or bread crust flavors. No strongly roasted flavors, but a touch of roasty dryness is allowable. Very low to low bitterness. Well-rounded, flavorful, often somewhat malty palate with a relatively dry finish. Very light to moderate vanilla optional. Low spicy, herbal, or floral hop flavor optional. Bubblegum, sourness, or smoke are faults.

Mouthfeel: Medium-light to medium-full body. Fluffy, creamy fullness progressing to a lighter finish, aided by moderate to high carbonation. Effervescent.

Comments: Often known as *dunkelweizen*, particularly in the United States. Increasingly rare and often being replaced by *Kristall* and non-alcoholic versions in Germany.

History: Bavaria has a wheat beer brewing tradition hundreds of years old, but the brewing right was reserved for Bavarian royalty until the late 1700s. Old-fashioned Bavarian wheat beer was often dark, as were most beers of the time. Pale Weissbier started to become popular in the 1960s, but traditional dark wheat beer remained somewhat of an old person's drink.

Characteristic Ingredients: Malted wheat, at least half the grist. Munich, Vienna, or Pilsner malt. Dark wheat, caramel wheat, or color malt. Decoction mash traditional. Weizen yeast, cool fermentation temperatures.

Style Comparison: Combines the yeast and wheat character of Weissbier with the malty richness of a Munich Dunkel. The banana-and-clove character is often less apparent than in a Weissbier due to the increased maltiness. Has a similar yeast character as Roggenbier, but without the rye flavor and increased body.

Vital Statistics: OG: 1.044 – 1.057
IBUs: 10 – 18 FG: 1.008 – 1.014
SRM: 14 – 23 ABV: 4.3 – 5.6%

Commercial Examples: Ayinger Urweisse, Ettaler Benediktiner Weißbier Dunkel, Franziskaner Hefe-Weisse Dunkel, Hirsch Dunkel Weisse, Tucher Dunkles Hefe Weizen, Weihenstephaner Hefeweißbier Dunkel
Tags: standard-strength, amber-color, top-fermented, central-europe, traditional-style, wheat-beer-family, malty

10C. Weizenbock

Overall Impression: A strong and malty German wheat beer combining the best wheat and yeast flavors of a Weissbier with the rich maltiness, strength, and body of a Bock. The style range includes Bock and Doppelbock strength, with variations for pale and dark color.

Aroma: Medium-high to high malty richness with a significant bready, grainy wheat character. Medium-low to medium-high weizen yeast character, typically banana and clove. Vanilla accents optional. No hops. Low to moderate alcohol, not hot or solventy. The malt, yeast, and alcohol are well balanced, complex, and inviting. Bubblegum (strawberry with banana), sourness, or smoke are faults.

Dark versions have a deeper, highly toasted, bready malt richness with significant Maillard products, similar to a Dunkles Bock or dark Doppelbock. They can also have caramel and dark fruit esters, like plums, prunes, dark grapes, fruit leather, and raisins, particularly as they age.

Pale versions have a grainy-sweet, bready, toasty malty richness, similar to a Helles Bock or pale Doppelbock.

Appearance: Very thick, moussy, long-lasting head. Can be hazy and have a shine from wheat and yeast, although this can settle out with age.

Dark versions are dark amber to dark ruby-brown in color, with a light tan head.

Pale versions are gold to amber in color, with a very white to off-white head.

Flavor: Medium-high to high malty richness with significant bready, grainy wheat flavor. Low to moderate banana and spice (clove, vanilla) yeast character. No hop flavor. Low to medium-low bitterness can give a slightly sweet palate impression, but the beer typically finishes dry. Light alcohol can enhance this character. The interplay between the malt, yeast, and alcohol adds complexity and interest, which is often enhanced with age. Bubblegum, sourness, or smoke are faults.

Dark versions have deeper, richly bready or toasty malt flavors with significant Maillard products, optionally with caramel or

light chocolate but not roast. Can have some dark fruit esters like plums, prunes, dark grapes, fruit leather, or raisins, particularly as they age.

Pale versions have a bready, toasty, grainy-sweet malt richness.

Mouthfeel: Medium-full to full body. Soft, smooth, fluffy or creamy texture. Mild alcohol warmth. Moderate to high carbonation.

Comments: A Weissbier brewed to bock or doppelbock strength, although Schneider also produces an Eisbock version. Pale and dark versions exist, but dark is most common. Lightly oxidized Maillard products can produce some rich, intense flavors and aromas that are often seen in aged imported commercial products; fresher versions will not have this character. Well-aged examples might also take on a slight sherry-like complexity. Pale versions, like their doppelbock cousins, have less rich malt complexity and often more hop-forward. However, versions that have significant late hops or are dry-hopped should be entered in 34B Mixed-Style Beer.

History: Doppelbock-strength Aventinus was created in 1907 at the Schneider Weisse Brauhaus in Munich. Pale versions are a much more recent invention.

Characteristic Ingredients: Malted wheat, at least half the grist. Munich, Vienna, or Pilsner malt. Color malts may be used sparingly. Decoction mash traditional. Weizen yeast, cool fermentation temperatures.

Style Comparison: Stronger and richer than a Weissbier or Dunkles Weissbier, but with similar yeast character. More directly comparable to the Doppelbock style, with the pale and dark variations. Can vary widely in strength, but most are in the Bock to Doppelbock range.

Entry Instructions: The entrant will specify whether the entry is a **pale** (SRM 6-9) or a **dark** (SRM 10-25) version.

Vital Statistics:	OG: 1.064 – 1.090
IBUs: 15 – 30	FG: 1.015 – 1.022
SRM: 6 – 25	ABV: 6.5 – 9.0%

Commercial Examples: **Dark** – Plank Bavarian Dunkler Weizenbock, Penn Weizenbock, Schalchner Weisser Bock, Schneider Weisse Aventinus; **Pale** – Ayinger Weizenbock, Distelhäuser Weizen Bock, Ladenburger Weizenbock Hell, Weihenstephaner Vitus

Tags: high-strength, amber-color, pale-color, top-fermented, central-europe, traditional-style, wheat-beer-family, malty

11. BRITISH BITTER

The family of British bitters grew out of English pale ales as a draught product after the late 1800s. The use of crystal malts in bitters became more widespread after WWI. Traditionally served very fresh under no pressure (gravity or hand pump only) at cellar temperatures (i.e., “real ale”). Most bottled or kegged versions of UK-produced bitters are often higher-alcohol and more highly carbonated versions of cask products produced for export, and have a different character and balance than their draught counterparts in Britain (often being sweeter and less hoppy than the cask versions). These guidelines reflect the “real ale” version of the style, not the export formulations of commercial products.

Several regional variations of bitter exist, ranging from darker, sweeter versions served with nearly no head to brighter, hoppier, paler versions with large foam stands, and everything in between.

Judges should not over-emphasize the caramel component of these styles. Exported bitters can be oxidized, which increases caramel-like flavors (as well as more negative flavors). Do not assume that oxidation-derived flavors are traditional or required for the style.

11A. Ordinary Bitter

Overall Impression: Low gravity, alcohol, and carbonation make this an easy-drinking session beer. The malt profile can vary in flavor and intensity, but should never override the overall bitter impression. Drinkability is a critical component of the style.

Aroma: Low to moderate malt aroma, often (but not always) with a light caramel quality. Bready, biscuity, or lightly toasty malt complexity is common. Mild to moderate fruitiness. Hop aroma can range from moderate to none, typically with a floral, earthy, resinous, or fruity character. Generally no diacetyl, although very low levels are allowed.

Appearance: Pale amber to light copper color. Good to brilliant clarity. Low to moderate white to off-white head. May have very little head due to low carbonation.

Flavor: Medium to moderately high bitterness. Moderately low to moderately high fruity esters. Moderate to low hop flavor, typically with an earthy, resinous, fruity, or floral character. Low to medium maltiness with a dry finish. The malt profile is typically bready, biscuity, or lightly toasty. Low to moderate caramel or toffee flavors are optional. Balance is often decidedly bitter, although the bitterness should not completely overpower the malt flavor, esters, and hop flavor. Generally no diacetyl, although very low levels are allowed.

Mouthfeel: Light to medium-light body. Low carbonation, although bottled examples can have moderate carbonation.

Comments: The lowest gravity member of the British Bitter family, typically known to consumers simply as “bitter” (although brewers tend to refer to it as Ordinary Bitter to distinguish it from other members of the family).

History: See comments in category introduction.

Characteristic Ingredients: Pale ale, amber, or crystal malts. May use a touch of dark malt for color adjustment. May use sugar adjuncts, corn, or wheat. English finishing hops are most traditional, but any hops are fair game; if American hops are used, a light touch is required. Characterful British yeast.

Style Comparison: Some modern variants are brewed exclusively with pale malt and are known as golden ales, summer ales, or golden bitters. Emphasis is on the bittering hop addition as opposed to the aggressive middle and late hopping seen in American ales.

Vital Statistics: OG: 1.030 – 1.039
IBUs: 25 – 35 FG: 1.007 – 1.011
SRM: 8 – 14 ABV: 3.2 – 3.8%

Commercial Examples: Bateman’s XB, Brains Bitter, Brakspear Gravity, Fuller’s Chiswick Bitter, Greene King IPA, Tetley’s Original Bitter

Tags: session-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, bitter

11B. Best Bitter

Overall Impression: A flavorful, yet refreshing, session beer. Some examples can be more malt balanced, but this should not override the overall bitter impression. Drinkability is a critical component of the style.

Aroma: Low to moderate malt aroma, often (but not always) with a low to medium-low caramel quality. Bready, biscuity, or lightly toasty malt complexity is common. Mild to moderate fruitiness. Hop aroma can range from moderate to none, typically with a floral, earthy, resinous, or fruity character. Generally no diacetyl, although very low levels are allowed.

Appearance: Pale amber to medium copper color. Good to brilliant clarity. Low to moderate white to off-white head. May have very little head due to low carbonation.

Flavor: Medium to moderately high bitterness. Moderately low to moderately high fruity esters. Moderate to low hop flavor, typically with an earthy, resinous, fruity, or floral character. Low to medium maltiness with a dry finish. The malt profile is typically bready, biscuity, or lightly toasty. Low to moderate caramel or toffee flavors are optional. Balance is often decidedly bitter, although the bitterness should not completely overpower the malt flavor, esters and hop flavor. Generally no diacetyl, although very low levels are allowed.

Mouthfeel: Medium-light to medium body. Low carbonation, although bottled examples can have moderate carbonation.

Comments: More evident malt flavor than in an ordinary bitter; this is a stronger, session-strength ale.

History: See comments in category introduction.

Characteristic Ingredients: Pale ale, amber, or crystal malts. Most contain sugar. May use a touch of caramel or dark malt for color adjustment. May use corn or wheat. English finishing hops are most traditional, but any hops are fair game; if American hops are used, a light touch is required. Characterful British yeast.

Style Comparison: More alcohol than an ordinary bitter, and often using higher-quality ingredients. Less alcohol than a strong bitter. More caramel or base malt character and color than a British Golden Ale. Emphasis is on the bittering hop addition as opposed to the aggressive middle and late hopping seen in American ales.

Vital Statistics: OG: 1.040 – 1.048
IBUs: 25 – 40 FG: 1.008 – 1.012
SRM: 8 – 16 ABV: 3.8 – 4.6%

Commercial Examples: Adnams Southwold Bitter, Fuller’s London Pride, Harvey’s Sussex Best Bitter, Salopian Darwin’s Origin, Surrey Hills Shere Drop, Timothy Taylor Landlord

Tags: standard-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, bitter

11C. Strong Bitter

Overall Impression: An average-strength to moderately-strong British bitter ale. The balance may vary between fairly even between malt and hops to somewhat bitter. Drinkability is a critical component of the style. A rather broad style that allows for considerable interpretation by the brewer.

Aroma: Hop aroma moderately-high to moderately-low, typically with a floral, earthy, resinous, or fruity character. Medium to medium-high malt aroma, optionally with a low to moderate caramel component. Medium-low to medium-high fruity esters. Generally no diacetyl, although very low levels are allowed.

Appearance: Light amber to deep copper color. Good to brilliant clarity. Low to moderate white to off-white head. A low head is acceptable when carbonation is also low.

Flavor: Medium to medium-high bitterness with supporting malt flavors evident. The malt profile is typically bready, biscuity, nutty, or lightly toasty, and optionally has a moderately low to moderate caramel or toffee flavor. Hop flavor moderate to moderately high, typically with a floral, earthy, resinous, or fruity character. Hop bitterness and flavor should be noticeable, but should not totally dominate malt flavors. Moderately-low to high fruity esters. Optionally may have low amounts of alcohol. Medium-dry to dry finish. Generally no diacetyl, although very low levels are allowed.

Mouthfeel: Medium-light to medium-full body. Low to moderate carbonation, although bottled versions will be higher. Stronger versions may have a slight alcohol warmth but this character should not be too high.

Comments: In England today, “ESB” is a Fullers trademark, and no one thinks of it as a generic class of beer. It is a unique (but very well-known) beer that has a very strong, complex malt profile not found in other examples, often leading judges to overly penalize traditional English strong bitters. In America, ESB has been co-opted to describe a malty, bitter,

reddish, standard-strength (for the US) British-type ale, and is a popular craft beer style. This may cause some judges to think of US brewpub ESBs as representative of this style.

History: See comments in category introduction. Strong bitters can be seen as a higher-gravity version of best bitters (although not necessarily “more premium” since best bitters are traditionally the brewer’s finest product). British pale ales are generally considered a premium, export-strength pale, bitter beer that roughly approximates a strong bitter, although reformulated for bottling (including increasing carbonation levels). While modern British pale ale is considered a bottled bitter, historically the styles were different.

Characteristic Ingredients: Pale ale, amber, or crystal malts, may use a touch of black malt for color adjustment. May use sugar adjuncts, corn or wheat. English finishing hops are most traditional, but any hops are fair game; if American hops are used, a light touch is required. Characterful British yeast. Burton versions use medium to high sulfate water, which can increase the perception of dryness and add a mineral or sulfury aroma and flavor.

Style Comparison: More evident malt and hop flavors than in a special or best bitter, as well as more alcohol. Stronger versions may overlap somewhat with British Strong Ales, although Strong Bitters will tend to be paler and more bitter. More malt flavor (particularly caramel) and esters than an American Pale Ale, with different finishing hop character.

Vital Statistics:	OG: 1.048 – 1.060
IBUs: 30 – 50	FG: 1.010 – 1.016
SRM: 8 – 18	ABV: 4.6 – 6.2%

Commercial Examples: Bass Ale, Bateman’s Triple XB, Robinsons Trooper, Samuel Smith’s Organic Pale Ale, Shepherd Neame Bishop’s Finger, Summit Extra Pale Ale

Tags: standard-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, bitter

12. PALE COMMONWEALTH BEER

This category contains pale, moderately-strong, hop-forward, bitter ales from countries within the former British Empire.

12A. British Golden Ale

Overall Impression: A hop-forward, average-strength to moderately-strong pale bitter. Drinkability and a refreshing quality are critical components of the style, as it was initially a summer seasonal beer.

Aroma: Hop aroma is moderately low to moderately high, and can use any variety of hops – floral, herbal, or earthy English hops and citrusy American hops are most common. Frequently a single hop varietal will be showcased. Low bready malt aroma with no caramel. Medium-low to low fruity aroma from the hops rather than esters. Low diacetyl optional.

Appearance: Straw to golden in color. Good to brilliant clarity. Low to moderate white head. A low head is acceptable when carbonation is also low.

Flavor: Medium to medium-high bitterness. Hop flavor is moderate to moderately high of any hop variety, although citrus flavors are increasingly common. Medium-low to low malt character, generally bready with perhaps a little biscuity flavor. Caramel flavors are typically absent. Hop bitterness and flavor should be pronounced. Moderately-low to low esters. Medium-dry to dry finish. Bitterness increases with alcohol level, but is always balanced. Low diacetyl optional.

Mouthfeel: Light to medium body. Low to moderate carbonation on draught, although bottled commercial versions will be higher. Stronger versions may have a slight alcohol warmth, but this character should not be too high.

Comments: Well-hopped, quenching beer with an emphasis on showcasing hops. Served colder than traditional bitters, this style was originally positioned as a refreshing summer beer, but is now often brewed year-round. Once brewed with English hops, increasingly American citrus-flavored hops are used. Golden Ales are also called Golden Bitters, Summer Ales, or British Blonde Ales. Can be found in cask, keg, and bottle.

History: Modern golden ales were developed in England to take on strongly-marketed lagers. While it is difficult to identify the first, Hop Back's Summer Lightning, first brewed in 1986, is thought by many to have got the style off the ground.

Characteristic Ingredients: Low-color pale or lager malt acting as a blank canvas for the hop character. May use sugar adjuncts, corn, or wheat. English hops frequently used, although citrusy American varieties are becoming more common. Somewhat clean-fermenting British yeast.

Style Comparison: More similar to an American Pale Ale than anything else, although it is often lower in alcohol and usually features British ingredients. Has no caramel and fewer esters compared to British Bitters and pale ales. Dry as Bitters but with less malt character to support the hops, giving a different balance. Often uses (and features) American hops, more so than most other modern British styles. Balance of hoppiness between a Blonde Ale and an American Pale Ale.

Vital Statistics:
IBUs: 20 – 45
SRM: 2 – 5

OG: 1.038 – 1.053
FG: 1.006 – 1.012
ABV: 3.8 – 5.0%

Commercial Examples: Adnams Explorer, Crouch Vale Brewers Gold, Golden Hill Exmoor Gold, Hop Back Summer Lightning, Oakham JHB, Spitfire Golden Ale

Tags: standard-strength, pale-color, top-fermented, british-isles, craft-style, pale-ale-family, bitter, hoppy

12B. Australian Sparkling Ale

Overall Impression: A well-balanced, pale, highly-carbonated, and refreshing ale suitable for drinking in a hot climate. Fairly bitter, with a moderate herbal-spicy hop and pome fruit ester profile. Smooth, neutral malt flavors with a fuller body but a crisp, highly-attenuated finish.

Aroma: Fairly soft, clean aroma with a balanced mix of esters, hops, malt, and yeast – all moderate to low in intensity. The esters are frequently pears and apples, optionally with a very light touch of banana. The hops are earthy, herbaceous, or might show the characteristic iron-like Pride of Ringwood nose. The malt can range from neutral grainy to moderately sweet to lightly bready; no caramel should be evident. Very fresh examples can have a lightly yeasty, sulfury nose.

Appearance: Deep yellow to light amber in color, often medium gold. Tall, frothy, persistent white head with tiny bubbles. Noticeable effervescence due to high carbonation. Brilliant clarity if decanted, but typically poured with yeast to have a cloudy appearance. Not typically cloudy unless yeast roused during the pour.

Flavor: Medium to low rounded, grainy to bready malt flavor, initially mild to malty-sweet but a medium to medium-high bitterness rises mid-palate to balance the malt. Caramel flavors typically absent. Highly attenuated, giving a dry, crisp finish with lingering bitterness, although the body gives an impression of fullness. Medium to medium-high hop flavor, somewhat earthy and possibly herbal, resinous, peppery, or iron-like but not floral, lasting into aftertaste. Medium-high to medium-low esters, often pears and apples. Banana is optional, but should never dominate. May be lightly mineral or sulfury, especially if yeast is present. Should not be bland.

Mouthfeel: High to very high carbonation, giving mouth-filling bubbles and a crisp, spritzly carbonic bite. Medium to medium-full body, tending to the higher side if poured with yeast. Smooth but gassy. Stronger versions may have a light alcohol warmth, but lower alcohol versions will not. Very well-attenuated; should not have any residual sweetness.

Comments: Coopers has been making their flagship Sparkling Ale since 1862, although the formulation has changed over the years. Presently the beer will have brilliant clarity if decanted, but publicans often pour most of the beer into a glass then swirl the bottle and dump in all the yeast. In some bars, the bottle is rolled along the bar. When served on draught, the brewery instructs publicans to invert the keg to rouse the yeast. A cloudy appearance for the style seems to be a modern consumer preference. Always naturally carbonated, even in the keg. A present-use ale, best enjoyed fresh.

History: Brewing records show that the majority of Australian beer brewed in the 19th century was draught XXX (Mild) and porter. Ale in bottle was originally developed to compete with imported bottled pale ales from British breweries, such as Bass and Wm Younger's Monk. By the early 20th century, bottled pale ale went out of fashion and "lighter" lager beers were in vogue. Many Australian Sparkling and Pale Ales were labeled as ales, but were actually bottom-fermented lagers with very similar grists to the ales that they replaced. Coopers of Adelaide, South Australia is the only surviving brewer producing the Sparkling Ale style.

Characteristic Ingredients: Lightly kilned Australian 2-row pale malt, lager varieties may be used. Small amounts of crystal malt for color adjustment only. Modern examples use no adjuncts, cane sugar for priming only. Historical examples using 45% 2 row, 30% higher protein malt (6 row) would use around 25% sugar to dilute the nitrogen content. Traditionally used Australian hops, Cluster, and Goldings until replaced from mid-1960s by Pride of Ringwood. Highly attenuative Burton-type yeast (Australian-type strain typical). Variable water profile, typically with low carbonate and moderate sulfate.

Style Comparison: Superficially similar to English Pale Ales, although much more highly carbonated, with less caramel, less late hops, and showcasing the signature yeast strain and hop variety. More bitter than IBUs might suggest due to high attenuation, low final gravity, and somewhat coarse hops.

Vital Statistics: OG: 1.038 – 1.050
IBUs: 20 – 35 FG: 1.004 – 1.006
SRM: 4 – 7 ABV: 4.5 – 6.0%

Commercial Examples: Coopers Sparkling Ale

Tags: standard-strength, pale-color, top-fermented, pacific, traditional-style, pale-ale-family, bitter

12C. English IPA

Overall Impression: A bitter, moderately-strong, very well-attenuated pale British ale with a dry finish and a hoppy aroma and flavor. Classic British ingredients provide the most authentic flavor profile.

Aroma: A moderate to moderately-high hop aroma, typically floral, spicy-peppery, or citrus-orange in nature. A slight dry-hop aroma is acceptable, but not required. Medium-low to medium bready or biscuity malt, optionally with a moderately-low caramel-like or toasty malt presence. Low to moderate fruitiness is acceptable. Optional light sulfury note.

Appearance: Color ranges from golden to deep amber, but most are fairly pale. Should be clear, although unfiltered dry-hopped versions may be a bit hazy. Moderate-sized, persistent head stand with off-white color.

Flavor: Hop flavor is medium to high, with a moderate to assertive hop bitterness. The hop flavor should be similar to the aroma (floral, spicy-peppery, or citrus-orange). Malt flavor should be medium-low to medium, and be somewhat bready, optionally with light to medium-light biscuit, toast, toffee, or caramel aspects. Medium-low to medium fruitiness. Finish is medium-dry to very dry, and the bitterness may linger into the aftertaste but should not be harsh. The balance is toward the hops, but the malt should still be noticeable in support. If high sulfate water is used, a distinctively mineral, dry finish, some sulfur flavor, and a lingering bitterness are usually present. Some clean alcohol flavor can be noted in stronger versions.

Mouthfeel: Smooth, medium-light to medium body without hop-derived astringency. Medium to medium-high carbonation can give an overall dry sensation despite a supportive malt presence. A low, smooth alcohol warming can be sensed in stronger versions.

Comments: The attributes of IPA that were important to its arrival in good condition in India were that it was very well-attenuated, and heavily hopped. Simply because this is how IPA was shipped, doesn't mean that other beers such as Porter weren't also sent to India, that IPA was invented to be sent to India, that IPA was more heavily hopped than other keeping beers, or that the alcohol level was unusual for the time.

Many modern examples labeled IPA are quite weak in strength. According to CAMRA, "so-called IPAs with strengths of around 3.5% are not true to style." English beer historian Martyn Cornell has commented that beers like this are "not really distinguishable from an ordinary bitter." So we choose to agree with these sources for our guidelines rather than what some modern British breweries are calling an IPA; just be aware of these two main types of IPAs in the British market today.

The beers were shipped in well-used oak casks, so the style shouldn't have an oak or Brett character.

History: Originally a pale stock ale from London that was first shipped to India in the late 1700s. George Hodgson of the Bow Brewery did not create the style, but was the first well known brewer to dominate the market. After a trade dispute, the East India Company had Samuel Allsopp recreate (and reformulate) the beer in 1823 using Burton's sulfate-rich water. The name India Pale Ale wasn't used until around 1830.

Strength and popularity declined over time, and the style virtually disappeared in the second half of the 20th century. While the stronger Burton-type IPA remained, the name was also applied to hoppy, lower-gravity, often bottled products (a trend that continues in some modern British examples). The style underwent a craft beer rediscovery in the 1980s, and is what is described in these guidelines.

Modern examples are inspired by classic versions, but shouldn't be assumed to have an unbroken lineage with the exact same profile. White Shield is probably the example with the longest lineage, tracing to the strong Burton IPAs of old and first brewed in 1829.

Characteristic Ingredients: Pale ale malt. English hops, particularly as finishing hops. Attenuative British ale yeast. Refined sugar may be used in some versions. Optional sulfate character from Burton-type water.

Style Comparison: Generally will have more late hops and less fruitiness and caramel than British pale ales and Bitters. Has less hop intensity and a more pronounced malt flavor than typical American IPAs.

Vital Statistics: OG: 1.050 – 1.070
IBUs: 40 – 60 FG: 1.010 – 1.015
SRM: 6 – 14 ABV: 5.0 – 7.5%

Commercial Examples: Berkshire Lost Sailor IPA, Fuller's Bengal Lancer, Marston's Old Empire IPA, Meantime London IPA, Thornbridge Jaipur, Worthington White Shield

13. BROWN BRITISH BEER

While Dark Mild, Brown Ale, and English Porter may have long and storied histories, these guidelines describe the modern versions. They are grouped together for judging purposes only since they often have similar flavors and balance, not because of any implied common ancestry. The similar characteristics are low to moderate strength, dark color, generally malty balance, and British ancestry. These styles have no historic relationship to each other; especially, none of these styles evolved into any of the others, or was ever a component of another. The category name was never used historically to describe this grouping of beers; it is our name for the judging category. “Brown Beer” was a distinct and important historical product, and is not related to this category name.

13A. Dark Mild

Overall Impression: A dark, low-gravity, malt-focused British session ale readily suited to drinking in quantity. Refreshing, yet flavorful for its strength, with a wide range of dark malt or dark sugar expression.

Aroma: Low to moderate malt aroma, and may have some fruitiness. The malt expression can take on a wide range of character, which can include caramel, toffee, grainy, toasted, nutty, chocolate, or lightly roasted. Low earthy or floral hop aroma optional. Very low diacetyl optional.

Appearance: Copper to dark brown or mahogany color. Generally clear, although is traditionally unfiltered. Low to moderate off-white to tan head; retention may be poor.

Flavor: Generally a malty beer, although may have a very wide range of malt- and yeast-based flavors (e.g., malty, sweet, caramel, toffee, toast, nutty, chocolate, coffee, roast, fruit, licorice, plum, raisin) over a bready, biscuity, or toasty base. Can finish sweet to dry. Versions with darker malts may have a dry, roasted finish. Low to moderate bitterness, enough to provide some balance but not enough to overpower the malt in the balance. Moderate fruity esters optional. Low hop flavor optional. Low diacetyl optional.

Mouthfeel: Light to medium body. Generally low to medium-low carbonation. Roast-based versions may have a light astringency. Sweeter versions may seem to have a rather full mouthfeel for the gravity. Should not be flat, watery, or thin.

Comments: Most are low-gravity session beers around 3.2%, although some versions may be made in the stronger (4%+) range for export, festivals, seasonal or special occasions. Generally served on cask; session-strength bottled versions don’t often travel well. A wide range of interpretations are possible. Pale (medium amber to light brown) versions exist, but these are even more rare than dark milds; these guidelines only describe the modern dark version.

History: Historically, ‘mild’ was simply an unaged beer, and could be used as an adjective to distinguish between aged or more highly hopped keeping beers. Modern milds trace their roots to the weaker X-type ales of the 1800s, which started to get darker in the 1880s, but only after WWI did they become dark brown. In current usage, the term implies a lower-strength beer with less hop bitterness than bitters. The guidelines describe the modern British version. The term ‘mild’ is currently somewhat out of favor with consumers, and many breweries no longer use it. Increasingly rare. *There is no historic connection or relationship between Mild and Porter.*

Style Comparison: Some versions may seem like lower-gravity modern English Porters. Much less sweet than London Brown Ale.

Characteristic Ingredients: Pale British base malts (often fairly dextrinous), crystal malt, dark malts or dark sugar adjuncts, may also include adjuncts such as flaked maize, and may be colored with brewer’s caramel. Characterful British ale yeast. Any type of hops, since their character is muted and rarely is noticeable.

Vital Statistics: OG: 1.030 – 1.038
IBUs: 10 – 25 FG: 1.008 – 1.013
SRM: 14 – 25 ABV: 3.0 – 3.8%

Commercial Examples: Brain’s Dark, Greene King XX Mild, Hobson’s Champion Mild, Mighty Oak Oscar Wilde, Moorhouse Black Cat, Theakston Traditional Mild

Tags: session-strength, dark-color, top-fermented, british-isles, traditional-style, brown-ale-family, malty

13B. British Brown Ale

Overall Impression: A malty, caramelly, brown British ale without the roasted flavors of a Porter. Balanced and flavorful, but usually a little stronger than most average UK beers.

Aroma: Light, sweet malt aroma with toffee, nutty, or light chocolate notes, and a light to heavy caramel quality. A light but appealing floral or earthy hop aroma may also be noticed. A light fruity aroma may be evident, but should not dominate.

Appearance: Dark amber to dark reddish-brown color. Clear. Low to moderate off-white to light tan head.

Flavor: Gentle to moderate malt sweetness, with a light to heavy caramel character, and a medium to dry finish. Malt may also have a nutty, toasted, biscuity, toffee, or light chocolate character. Medium to medium-low bitterness. Malt-hop balance ranges from even to malt-focused. Low floral or earthy hop flavor optional. Low to moderate fruity esters optional.

Mouthfeel: Medium-light to medium body. Medium to medium-high carbonation.

Comments: A wide-ranging category with different interpretations possible, ranging from lighter-colored to hoppy to deeper, darker, and caramel-focused; however, none of the versions have strongly roasted flavors. A stronger Double Brown Ale was more popular in the past, but is very hard to find now. While London Brown Ales are marketed using the name Brown Ale, we list those as a different judging style due to the significant difference in balance (especially sweetness) and alcohol strength; that doesn’t mean that they aren’t in the same family, though.

History: Brown ale has a long history in Great Britain, although different products used that name at various times. Modern brown ale is a 20th century creation; it is not the same as historical products with the same name. A wide range of gravities were brewed, but modern brown ales are generally of the stronger (by current UK standards) interpretation. This style is based on the modern stronger British brown ales, not historical versions or the sweeter London Brown Ale described in the Historical Beer category. Predominantly but not exclusively a bottled product currently.

Characteristic Ingredients: British mild ale or pale ale malt base with caramel malts. May also have small amounts darker malts (e.g., chocolate) to provide color and the nutty character. English hop varieties are most authentic.

Style Comparison: More malty balance than British Bitters, with more malt flavors from darker grains. Stronger than a

Dark Mild. Less roast than an English Porter. Stronger and much less sweet than London Brown Ale.

Vital Statistics: OG: 1.040 – 1.052
IBUs: 20 – 30 FG: 1.008 – 1.013
SRM: 12 – 22 ABV: 4.2 – 5.9%

Commercial Examples: AleSmith Nut Brown Ale, Cigar City Maduro Brown Ale, Maxim Double Maxim, Newcastle Brown Ale, Riggwelter Yorkshire Ale, Samuel Smith's Nut Brown Ale

Tags: standard-strength, amber-color, top-fermented, british-isles, traditional-style, brown-ale-family, malty

13C. English Porter

Simply called "Porter" in Britain, the name "English Porter" is used to differentiate it from other derivative porters described in these guidelines.

Overall Impression: A moderate-strength dark brown English ale with a restrained roasty, bitter character. May have a range of roasted flavors, generally without burnt qualities, and often has a malty chocolate and caramel profile.

Aroma: Moderate to moderately low bready, biscuity, and toasty malt aroma with mild roastiness, often like chocolate. Additional malt complexity may be present as caramel, nuts, toffee sweetness. May have up to a moderate level of floral or earthy hops. Moderate fruity esters optional, but desirable. Low diacetyl optional.

Appearance: Brown to dark brown in color, often with ruby highlights. Good clarity, although may be opaque. Moderate off-white to light tan head with good to fair retention.

Flavor: Moderate bready, biscuity, and toasty malt flavor with a mild to moderate chocolate roastiness, and often a significant caramel, nutty, or toffee character, possibly with lower levels of darker flavors like coffee or licorice. Should not be burnt or harshly roasted, although small amounts may contribute a bitter chocolate complexity. Up to moderate earthy or floral hop flavor optional. Low to moderate fruity esters. Medium-low to medium bitterness varies the balance from slightly malty to slightly bitter, with a fairly dry to slightly sweet finish. Moderately-low diacetyl optional.

Mouthfeel: Medium-light to medium body. Moderately-low to moderately-high carbonation. Light to moderate creamy texture.

Comments: This style description describes the modern version of English Porter, not every possible variation over time in every region where it existed. Historical re-creations should be entered in the 27 Historical Beer category, with an appropriate description describing the profile of the beer. Modern craft examples in the UK are bigger and hoppier.

History: Originating in London in the early 1700s, porter evolved as a more heavily hopped and aged (keeping) version of the Brown Beer popular at the time. It evolved many times based on various technological and ingredient developments (such as the invention of black malt in 1817, and large-scale industrial brewing), as well as consumer preferences, wars, and tax policy. It became a highly-popular, widely-exported style in the early 1800s before declining by the 1870s as it changed to a lower gravity, unaged beer. As gravities continued to decline in all UK beers in the first half of the 1900s, styles stopped being made (including porter, gone by the 1950s). The craft beer era led to its re-introduction in 1978.

The name is said to have been derived from its popularity with the London working class performing various load-carrying tasks of the day. Parent of various regional interpretations over time, and a predecessor to all stouts (which were originally called "stout porters"). *There is no historic connection or relationship between Mild and Porter.*

Characteristic Ingredients: Grists vary, but something producing a dark color is always involved. Chocolate or other roasted malts, caramel malt, brewing sugars, and the like are common. London-type porters often use brown malt as a characteristic flavor.

Style Comparison: Differs from American Porter in that it usually has softer, sweeter, and more caramelly flavors, lower gravities, and usually less alcohol; American Porter also usually has more hop character. More substance and roast than a British Brown Ale. Higher in gravity than a Dark Mild.

Vital Statistics: OG: 1.040 – 1.052
IBUs: 18 – 35 FG: 1.008 – 1.014
SRM: 20 – 30 ABV: 4.0 – 5.4%

Commercial Examples: Bateman's Salem Porter, Burton Bridge Burton Porter, Fuller's London Porter, Nethergate Old Growler Porter, RCH Old Slug Porter, Samuel Smith Taddy Porter

Tags: standard-strength, dark-color, top-fermented, british-isles, traditional-style, porter-family, malty, roasty

14. SCOTTISH ALE

There are really only three traditional beer styles broadly available today in Scotland: the 70/- Scottish Heavy, the 80/- Scottish Export, and the Strong Scotch Ale (Wee Heavy, Style 17C). The 60/- Scottish Light is rare and often cask-only, but it does seem to be having a bit of a renaissance currently. All these styles took modern form after World War II, regardless of prior use of the same names. Currently, the 60/- is similar to a dark mild, the 70/- is similar to an ordinary bitter, and the 80/- similar to a best or strong bitter. The Scottish beers have a different balance and flavor profile, but fill a similar market position as those English beers.

The Light, Heavy, and Export beers have similar flavor profiles, and are often produced through the parti-gyling process. As gravity increases, so does the character of the beer. Traditional ingredients were dextrinous pale ale malt, corn, dark brewing sugars, and brewers caramel for coloring. Modern (post-WWII) recipes often add small amounts of dark malt and lower percentages of crystal malt, along with other ingredients like amber malt and wheat. Scottish brewers traditionally used single infusion mashes, often with underlet mashes and multiple sparges.

In general, these Scottish beers are weaker, sweeter, darker, lower in attenuation, and less highly hopped compared to equivalent modern English beers. They are produced using slightly cooler fermentation temperatures than their counterparts. Many of these differences have been exaggerated in popular lore; they are noticeable, but not huge, yet enough to affect the balance of the beer, and to perhaps indicate a national flavor preference. The balance remains malty and somewhat sweet due to higher finishing gravity, lower alcohol, and lower hopping rates. Many of these divergences from English beer took place between the late 1800s and the mid-1900s.

Production methods championed by homebrewers, such as kettle caramelization or grists heavy in a variety of crystal malts, are not commonly used in traditional products but can approximate those flavors when traditional ingredients aren't available. The use of peat-smoked malt is not only completely inauthentic, it produces a dirty, phenolic flavor inappropriate in any of these styles. Smoked versions (using any type smoke) should be entered in 32A Classic Style Smoked Beer.

The use of 'shilling' (/-) designations is a Scottish curiosity. Originally it referred to the price of beer in hogshead casks, which in no way could be constant over time. Shillings aren't even used a currency now in Scotland. But the name stuck as a shorthand for a type of beer, even if the original meaning stopped being the real price during WWI. About all it means now is that larger numbers mean stronger beers, at least within the same brewery. Between the world wars, some breweries used the price per pint rather than shillings (e.g., Maclay 6d for 60/-, 7d for 70/-, 8d for 80/-). Confusingly, during this time 90/- pale ale was a low-gravity bottled beer. Curious, indeed.

14A. Scottish Light

Overall Impression: A low-alcohol, malty beer with light caramel, toast, toffee, and fruit flavors. A slight roast dryness offsets the residual sweetness in the finish, with the bitterness perceived only to keep the beer from being cloying.

Aroma: Low to medium maltiness with caramel and toffee notes, and light toasty and sugary qualities that might be reminiscent of toasted breadcrumbs, ladyfingers, English biscuits, graham crackers, or butterscotch. Light pome fruitiness and light English hop aroma (earthy, floral, orange-citrus, spicy, etc.) allowable.

Appearance: Deep copper to dark brown. Clear. Low to moderate, creamy off-white.

Flavor: Medium toasty-bready malt with caramel and toffee overtones, finishing with a slightly roasty dryness. A wide range of caramelized sugar and toasted bread type of flavors are possible, using similar descriptors as the aroma. Clean maltiness and fermentation profile. Light esters and hop flavor allowable (similar descriptors as aroma). Sufficient bitterness to not be cloying, but with a malty balance and aftertaste.

Mouthfeel: Medium-low to medium body. Low to moderate carbonation. Maybe be moderately creamy.

Comments: See category introduction for detailed comments. May not seem as bitter as specifications indicate due to higher finishing gravity and residual sweetness. Typically a draught product, but somewhat rare. Do not mis-perceive the light roasty dryness as smoke; smoke is not present in these beers.

History: See category introduction. The Shilling ale names were used for mild (unaged) beer before World War I, but the styles took modern form only after World War II.

Characteristic Ingredients: At its simplest, pale ale malt, but can also use colored malt, sugars, corn, wheat, crystal

malts, colorants, and a variety of other grains. Clean yeast. Soft water. *No peat-smoked malt.*

Style Comparison: See category introduction. Similar to other Scottish Ales but lower in alcohol, and darker in color. Similar in strength to the low end of Dark Mild, but with a different flavor profile and balance.

Vital Statistics:

OG:	1.030 – 1.035
IBUs:	10 – 20
SRM:	17 – 25
FG:	1.010 – 1.013
ABV:	2.5 – 3.3%

Commercial Examples: Belhaven Best, McEwan's 60/-

Tags: session-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, malty

14B. Scottish Heavy

Overall Impression: A lower-alcohol, malty beer with light caramel, toast, toffee, and fruity flavors. A slight roast dryness offsets the residual sweetness in the finish, with the bitterness perceived only to keep the beer from being cloying.

Aroma: Medium-low to medium maltiness with caramel and toffee notes, and light toasty and sugary qualities that might be reminiscent of toasted breadcrumbs, ladyfingers, English biscuits, graham crackers, or butterscotch. Light pome fruitiness and light English hop aroma (earthy, floral, orange-citrus, spicy, etc.) allowable.

Appearance: Pale copper to brown. Clear. Low to moderate, creamy off-white.

Flavor: Medium toasty-bready malt with caramel and toffee overtones, finishing with a slightly roasty dryness. A wide range of caramelized sugar and toasted bread type of flavors are possible, using similar descriptors as the aroma. Clean maltiness and fermentation profile. Light esters and hop flavor allowable (similar descriptors as aroma). Sufficient bitterness to not be cloying, but with a malty balance and aftertaste.

Mouthfeel: Medium-low to medium body. Low to moderate carbonation. Maybe be moderately creamy.

Comments: See category introduction for detailed comments. May not seem as bitter as specifications indicate due to higher finishing gravity and residual sweetness. Do not mis-perceive the light roasty dryness as smoke; smoke is not present in these beers.

History: See category introduction. The Shilling ale names were used for mild (unaged) beer before World War I, but the styles took modern form only after World War II.

Characteristic Ingredients: At its simplest, pale ale malt and colored malt, but can also use sugars, corn, wheat, crystal malts, colorants, and a variety of other grains. Clean yeast. Soft water. *No peat-smoked malt.*

Style Comparison: See category introduction. Similar to other Scottish Ales in flavor profile, lighter in color and stronger than a Scottish Light. Similar in strength to Ordinary Bitter, but with a different flavor profile and balance.

Vital Statistics: OG: 1.035 – 1.040
IBUs: 10 – 20 FG: 1.010 – 1.015
SRM: 12 – 20 ABV: 3.3 – 3.9%

Commercial Examples: McEwan's 70/-, Orkney Raven Ale

Tags: session-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, malty

14C. Scottish Export

Overall Impression: A moderate-strength, malty beer with light caramel, toast, toffee, and fruit flavors. A slight roast dryness offsets the residual sweetness in the finish, with the bitterness perceived only to keep the beer from being cloying.

Aroma: Medium maltiness with caramel and toffee notes, and light toasty and sugary qualities that might be reminiscent of toasted breadcrumbs, ladyfingers, English biscuits, graham crackers, or butterscotch. Light pome fruitiness and light English hop aroma (earthy, floral, orange-citrus, spicy, etc.) allowable.

Appearance: Pale copper to brown. Clear. Low to moderate, creamy off-white.

Flavor: Medium toasty-bready malt with caramel and toffee overtones, finishing with a slightly roasty dryness. A wide range of caramelized sugar and toasted bread type of flavors are possible, using similar descriptors as the aroma. Clean maltiness and fermentation profile. Light esters and hop flavor allowable (similar descriptors as aroma). Sufficient bitterness to not be cloying, but with a malty balance and aftertaste.

Mouthfeel: Medium body. Medium-low to medium carbonation. Maybe be moderately creamy.

Comments: See category introduction for detailed comments. May not seem as bitter as specifications indicate due to higher finishing gravity and residual sweetness. Do not mis-perceive the light roasty dryness as smoke; smoke is not present in these beers. Americanized versions are often greater in strength (similar to American treatment of Irish Red Ales).

History: See category introduction. The Shilling ale names were used for mild (unaged) beer before World War I, but the styles took modern form only after World War II.

Characteristic Ingredients: At its simplest, pale ale malt and colored malt, but can also use sugars, corn, wheat, crystal malts, colorants, and a variety of other grains. Clean yeast. Soft water. *No peat-smoked malt.*

Style Comparison: See category introduction. Stronger than other Scottish Ales, but with a similar flavor profile. Similar in strength to Best Bitter and Strong Bitter, but with a different flavor profile and balance.

Vital Statistics: OG: 1.040 – 1.060
IBUs: 15 – 30 FG: 1.010 – 1.016
SRM: 12 – 20 ABV: 3.9 – 6.0%

Commercial Examples: Belhaven Scottish Ale, Broughton Wee Jock 80 Shilling, Caledonian Edinburgh Castle, McEwan's 80/-, McEwan's Export, Traquair Bear Ale

Tags: standard-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, malty

15. IRISH BEER

The traditional beers of Ireland contained in this category are amber to dark, top-fermented beers of moderate to slightly strong strength, and are often widely misunderstood due to differences in export versions, or overly focusing on the specific attributes of beer produced by high-volume, well-known breweries. Each of the styles in this grouping has a wider range than is commonly believed.

15A. Irish Red Ale

Overall Impression: An easy-drinking pint, often with subtle flavors. Slightly malty in the balance sometimes with an initial soft toffee or caramel sweetness, a slightly grainy-biscuity palate, and a touch of roasted dryness in the finish. Some versions can emphasize the caramel and sweetness more, while others will favor the grainy palate and roasted dryness.

Aroma: Low to moderate malt aroma, either neutral-grainy or with a lightly caramel, toast, or toffee character. Very light buttery character optional. Low earthy or floral hop aroma optional. Quite clean.

Appearance: Medium amber to medium reddish-copper color. Clear. Low off-white to tan colored head, average persistence.

Flavor: Moderate to very little caramel malt flavor and sweetness, rarely with a light buttered toast or toffee-like quality. The palate often is fairly neutral and grainy, or can take on a lightly toasty or biscuity note as it finishes with a light taste of roasted grain, which lends a characteristic dryness to the finish. A light earthy or floral hop flavor is optional. Medium to medium-low bitterness. Medium-dry to dry finish. Clean and smooth. Low esters optional. The balance tends to be slightly towards the malt, although light use of roasted grains may increase the perception of bitterness slightly.

Mouthfeel: Medium-light to medium body, although examples containing low levels of diacetyl may have a slightly slick mouthfeel (not required). Moderate carbonation. Smooth.

Comments: The style is fairly broad to allow for examples beyond the traditional ones from Ireland. Irish examples tend to be lower alcohol, grainier, and drier in the finish, while non-Irish versions are often higher in alcohol, sweeter, perhaps more caramelly and estery, and are often seasonal offerings.

History: While Ireland has a long ale brewing heritage, the modern Irish Red Ale style is essentially an adaptation or interpretation of the popular English Bitter style with less hopping and a bit of roast to add color and dryness, although some suggest a longer history. Rediscovered as a craft beer style in Ireland, today it is an essential part of most brewery lineups, along with a pale ale and a stout.

Characteristic Ingredients: Generally has a bit of roasted barley or black malt to provide reddish color and dry roasted finish. Pale base malt. Caramel malts were historically imported and more expensive, so not all brewers would use them.

Style Comparison: A less-bitter and hoppy Irish equivalent to an English Bitter, with a dryish finish due to roasted barley. More attenuated with less caramel flavor and body than equivalent-strength Scottish Ales.

Vital Statistics: OG: 1.036 – 1.046
IBUs: 18 – 28 FG: 1.010 – 1.014
SRM: 9 – 14 ABV: 3.8 – 5.0%

Commercial Examples: Franciscan Well Rebel Red, Kilkenny Irish Beer, Murphy's Irish Red, O'Hara's Irish Red Ale, Porterhouse Nitro Red Ale, Smithwick's Irish Ale

Tags: standard-strength, amber-color, top-fermented, british-isles, traditional-style, amber-ale-family, balanced

15B. Irish Stout

Overall Impression: A black beer with a pronounced roasted flavor, often similar to coffee. The balance can range from fairly even to quite bitter, with the more balanced versions having a little malty sweetness and the bitter versions being quite dry. Draught versions typically are creamy from a nitro pour, but bottled versions will not have this dispense-derived character. The roasted flavor can range from dry and coffee-like to somewhat chocolaty.

Aroma: Moderate coffee-like aroma typically dominates; may have slight dark chocolate, cocoa, or roasted grain secondary notes. Medium-low esters optional. Low earthy or floral hop aroma optional.

Appearance: Jet black to deep brown with garnet highlights in color. According to Guinness, "Guinness beer may appear black, but it is actually a very dark shade of ruby." Opaque. A thick, creamy, long-lasting, tan- to brown-colored head is characteristic when served on nitro, but don't expect a tight, creamy head on a bottled beer.

Flavor: Moderate roasted grain or malt flavor with a medium to high bitterness. The finish can be dry and coffee-like to moderately balanced with a touch of caramel or malty sweetness. Typically has coffee-like flavors, but also may have a bittersweet or unsweetened chocolate character in the palate, lasting into the finish. Balancing factors may include some creaminess, medium-low fruitiness, or medium earthy hop flavor. The level of bitterness is somewhat variable, as is the roasted character and the dryness of the finish; allow for interpretation by brewers.

Mouthfeel: Medium-light to medium-full body, with a somewhat creamy character – especially when served by nitro pour. Low to moderate carbonation. For the high hop bitterness and significant proportion of dark grains present, this beer is remarkably smooth. May have a light astringency from the roasted grains, although harshness is undesirable.

Comments: Traditionally a draught product. Modern examples are almost always associated with a nitro pour. Do not expect bottled beers to have the full, creamy texture or very long-lasting head associated with mixed-gas dispense. Regional differences exist in Ireland, similar to variability in English Bitters. Dublin-type stouts use roasted barley, are more bitter, and are drier. Cork-type stouts are sweeter, less bitter, and have flavors from chocolate and specialty malts.

History: The style evolved from London porters, but reflecting a fuller, creamier, more "stout" body and strength. Guinness began brewing only porter in 1799, and a "stouter kind of porter" around 1810. Irish stout diverged from London single stout (or simply porter) in the late 1800s, with an emphasis on darker malts and roast barley. Guinness began using flaked barley after WWII, and Guinness Draught was launched as a brand in 1959. Draught ("widget") cans and bottles were developed in the late 1980s and 1990s.

Characteristic Ingredients: Dark roasted malts or grains, enough to make the beer black in color. Pale malt. May use unmalted grains for body.

Style Comparison: Lower strength than an Irish Extra Stout. Darker in color (black) than an English Porter (brown).

Vital Statistics: OG: 1.036 – 1.044
IBUs: 25 – 45 FG: 1.007 – 1.011
SRM: 25 – 40 ABV: 3.8 – 5.0%

Commercial Examples: Beamish Irish Stout, Belhaven Black Stout, Guinness Draught, Murphy's Irish Stout, O'Hara's Irish Stout, Porterhouse Irish Stout

Tags: standard-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, bitter, roasty

15C. Irish Extra Stout

Overall Impression: A fuller-bodied black beer with a pronounced roasted flavor, often similar to coffee and dark chocolate with some malty complexity. The balance can range from moderately bittersweet to bitter, with the more balanced versions having up to moderate malty richness and the bitter versions being quite dry.

Aroma: Moderate to moderately high coffee-like aroma, often with slight dark chocolate, cocoa, biscuit, vanilla, or roasted grain secondary notes. Medium-low esters optional. Hop aroma low to none, may be lightly earthy or spicy, but is typically absent. Malt and roast dominate the aroma.

Appearance: Jet black. Opaque. A thick, creamy, persistent tan head is characteristic.

Flavor: Moderate to moderately high dark-roasted grain or malt flavor with a medium to medium-high bitterness. The finish can be dry and coffee-like to moderately balanced with up to moderate caramel or malty sweetness. Typically has roasted coffee-like flavors, but also often has a dark chocolate character in the palate, lasting into the finish. Background mocha or biscuit flavors are often present and add complexity. Medium-low fruitiness optional. Medium earthy or spicy hop

flavor optional. The level of bitterness is somewhat variable, as is the roasted character and the dryness of the finish; allow for interpretation by brewers.

Mouthfeel: Medium-full to full body, with a somewhat creamy character. Moderate carbonation. Very smooth. May have a light astringency from the roasted grains, although harshness is undesirable. A slightly warming character may be detected.

Comments: Traditionally a stronger, bottled product with a range of equally valid possible interpretations, varying most frequently in roast flavor and sweetness. Most traditional Irish commercial examples are in the 5.6 to 6.0% ABV range.

History: Same roots as Irish Stout, but as a stronger product. Guinness Extra Stout (Extra Superior Porter, later Double Stout) was first brewed in 1821, and was primarily a bottled product.

Characteristic Ingredients: Similar to Irish Stout. May have additional dark crystal malts or dark sugars.

Style Comparison: Midway between an Irish Stout and a Foreign Extra Stout in strength and flavor intensity, although with a similar balance. More body, richness, and often malt complexity than an Irish Stout. Black in color, not brown like an English Porter.

Vital Statistics: OG: 1.052 – 1.062
IBUs: 35 – 50 FG: 1.010 – 1.014
SRM: 30 – 40 ABV: 5.0 – 6.5%

Commercial Examples: Guinness Extra Stout, O'Hara's Leann Folláin, Porterhouse XXXX, Sheaf Stout

Tags: high-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, bitter, roasty

16. DARK BRITISH BEER

This category contains average to strong, bitter to sweet, modern British and Irish stouts that originated in England even if some are now more widely associated with Ireland. In this case, “British” means the broader British Isles not Great Britain.

16A. Sweet Stout

Overall Impression: A very dark, sweet, full-bodied, slightly roasty stout that can suggest coffee-and-cream, or sweetened espresso.

Aroma: Mild roasted grain aroma, sometimes with coffee or chocolate notes. An impression of cream-like sweetness often exists. Fruitiness can be low to moderately high. Low diacetyl optional. Low floral or earthy hop aroma optional.

Appearance: Very dark brown to black in color. Clear, if not opaque. Creamy tan to brown head.

Flavor: Dark, roasted, coffee or chocolate flavors dominate the palate. Low to moderate fruity esters. Moderate bitterness. Medium to high sweetness provides a counterpoint to the roasted character and bitterness, lasting into the finish. The balance between dark grains or malts and sweetness can vary, from quite sweet to moderately dry and somewhat roasty. Low diacetyl optional. Low floral or earthy hop flavor optional.

Mouthfeel: Medium-full to full-bodied and creamy. Low to moderate carbonation. High residual sweetness from unfermented sugars enhances the full-tasting mouthfeel.

Comments: Gravities are low in Britain (sometimes lower than the statistics below), higher in exported and US products. Variations exist, with the level of residual sweetness, the intensity of the roast character, and the balance between the two being the variables most subject to interpretation.

History: An English style of stout developed in the early 1900s. Historically known as “Milk” or “Cream” stouts, legally this designation is no longer permitted in England but may be acceptable elsewhere. The “milk” name is derived from the use of the milk sugar *lactose* as a sweetener. Originally marketed as a tonic for invalids and nursing mothers.

Characteristic Ingredients: Base of pale malt with dark malts or grains. May use grain or sugar adjuncts. Lactose is frequently added to provide additional residual sweetness.

Style Comparison: Much sweeter and less bitter-tasting than other stouts, except the stronger Tropical Stout. The roast character is mild, not burnt like other stouts. Can be similar in balance to Oatmeal Stout, albeit with more sweetness.

Vital Statistics:

OG:	1.044 – 1.060
IBUs:	20 – 40
SRM:	30 – 40
FG:	1.012 – 1.024
ABV:	4.0 – 6.0%

Commercial Examples: Bristol Beer Factory Milk Stout, Firestone Nitro Merlin Milk Stout, Left Hand Milk Stout, Lancaster Milk Stout, Mackeson's XXX Stout, Marston's Pearl Jet Stout

Tags: standard-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, malty, roasty, sweet

16B. Oatmeal Stout

Overall Impression: A dark, roasty, full-bodied stout with enough sweetness to support the oat backbone. The sweetness, balance, and oatmeal impression can vary considerably.

Aroma: Mild grainy, roasty, coffee-like character with a light malty sweetness that can give a coffee-and-cream impression. Low to medium-high fruitiness. Medium-low earthy or floral

hop aroma optional. A light grainy-nutty oatmeal aroma is optional. Medium-low diacetyl optional but typically absent.

Appearance: Brown to black in color. Thick, creamy, persistent tan- to brown-colored head. Clear, if not opaque.

Flavor: Similar to the aroma, with a mild roasted coffee, milk chocolate, or coffee-and-cream flavor, and low to moderately-high fruitiness. Oats can add a toasty-nutty, grainy, or earthy flavor. Medium bitterness. Medium-sweet to medium-dry finish, which affects the perception of balance. Malty, roasty, nutty aftertaste. Medium-low earthy or floral hop flavor optional. Medium-low diacetyl optional but typically absent.

Mouthfeel: Medium-full to full body, with a smooth, silky, velvety, sometimes an almost oily slickness from the oatmeal. Creamy. Medium to medium-high carbonation. Stronger versions may be lightly warming.

Comments: When judging, allow for differences in balance and interpretation. American versions tend to be more hoppy, less sweet, and less fruity than English examples. Bitterness, sweetness, and oatmeal impression varies. Light use of oatmeal may give a certain silkiness of body and richness of flavor, while heavy use of oatmeal can be fairly intense in flavor with an almost oily mouthfeel and dryish finish.

History: A variant of nourishing or invalid stouts around 1900 using oatmeal in the grist, similar to but independent of the development of sweet stout using lactose. An original Scottish version used a significant amount of oat malt. Later went through a shady phase where some English brewers would throw a handful of oats into their parti-gyled stouts in order to legally produce a ‘healthy’ Oatmeal Stout for marketing purposes. Most popular in England between the World Wars, was revived in the craft beer era for export, which helped lead to its adoption as a popular modern American craft beer style that uses a noticeable (not symbolic) quantity of oats.

Characteristic Ingredients: Pale, caramel, and dark roasted malts (often chocolate) and grains. Oatmeal or malted oats (5-20% or more). Hops primarily for bittering. Can use brewing sugars or syrups. English ale yeast.

Style Comparison: Most are like a cross between an Irish Extra Stout and a Sweet Stout with oatmeal added. Several variations exist, with the sweeter versions more like a Sweet Stout with oatmeal instead of lactose, and the drier versions more like a more nutty, flavorful Irish Extra Stout. Both tend to emphasize the body and mouthfeel.

Vital Statistics:

OG:	1.045 – 1.065
IBUs:	25 – 40
SRM:	22 – 40
FG:	1.010 – 1.018
ABV:	4.2 – 5.9%

Commercial Examples: Anderson Valley Barney Flats Oatmeal Stout, Broughton Stout Jock, St-Ambroise Oatmeal Stout, Samuel Smith Oatmeal Stout, Summit Oatmeal Stout, Young's London Stout

Tags: standard-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, balanced, roasty

16C. Tropical Stout

Overall Impression: A very dark, sweet, fruity, moderately strong stout with smooth, roasty flavors, yet no burnt harshness.

Aroma: Moderate to high intensity sweetness is prominent. Moderate to high coffee or chocolate roasty aroma, but not burnt. Medium to high fruitiness. May have a molasses, licorice, burnt sugar, dried fruit, or vinous aromatics. Stronger versions can have a subtle, clean aroma of alcohol. Low hop aroma optional. Low diacetyl optional.

Appearance: Very deep brown to black in color. Clarity usually obscured by deep color. Clear, if not opaque. Large tan to brown head with good retention.

Flavor: Quite sweet with a smooth dark grain flavors, and restrained, medium-low to medium bitterness. Smooth, roasty flavor, often like coffee or chocolate, although moderated in the balance by the sweet finish. No burnt malt flavor or harsh bite in the finish. Moderate to high fruity esters. Can have a sweet, dark rum, molasses, or burnt sugar-like quality. Low hop flavor optional. Medium-low diacetyl optional.

Mouthfeel: Medium-full to full body, often with a smooth, creamy character. May have a warming but not hot alcohol presence. Moderate to moderately-high carbonation.

Comments: Surprisingly refreshing in a hot climate. Sweetness levels can vary significantly. *Tropical* implies that the beer originated in and is popular in the tropics, not that it has characteristics of tropical fruit from hops or fruit.

History: A local adaptation of Foreign Extra Stouts brewed with indigenous ingredients and methods in the Caribbean and other tropical markets. Bitterness lower than export-type stouts since these beers do not have to be shipped abroad, and to suit local palate preferences.

Characteristic Ingredients: Similar to a Sweet Stout, but higher gravity. Pale and dark roasted malts and grains. Hops mostly for bitterness. May use adjuncts and sugar to boost gravity. Typically made with warm-fermented lager yeast.

Style Comparison: Tastes like a scaled-up Sweet Stout with higher fruitiness. Similar to some Imperial Stouts without the high bitterness, strong or burnt roastiness, and late hops, and with lower alcohol. Much sweeter and less hoppy than American Stouts. Much sweeter and less bitter than the similar-gravity Foreign Extra Stouts.

Vital Statistics:
OG: 1.056 – 1.075
IBUs: 30 – 50
SRM: 30 – 40
FG: 1.010 – 1.018
ABV: 5.5 – 8.0%

Commercial Examples: ABC Extra Stout, Bahamian Strong Back Stout, Dragon Stout, Jamaica Stout, Lion Stout, Royal Extra Stout

Tags: high-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, malty, roasty, sweet

16D. Foreign Extra Stout

Overall Impression: A very dark, rich, moderately strong, fairly dry stout with prominent roast flavors.

Aroma: Moderate to high roast, like coffee, dark chocolate, or lightly burnt grain. Low to medium fruitiness. May have a sweet aroma, or molasses, licorice, dried fruit, or vinous aromatics. Stronger versions can have a subtle, clean aroma of alcohol. Low earthy, herbal, or floral hop aroma optional. Low diacetyl optional.

Appearance: Very deep brown to black in color. Clarity usually obscured by deep color. Clear, if not opaque. Large tan to brown head with good retention.

Flavor: Moderate to high roast, like coffee, dark chocolate, or lightly burnt grain, although without a sharp bite. Low to medium esters. Medium to high bitterness. Moderately dry finish. Moderate earthy, herbal, or floral hop flavor optional. Medium-low diacetyl optional.

Mouthfeel: Medium-full to full body, often with a smooth, sometimes creamy character. May have a warming but not hot alcohol presence. Moderate to moderately-high carbonation.

Comments: Also known as Foreign Stout, Export Stout, and Foreign Export Stout. Historic versions (before WWI, at least) had the same OG as domestic Extra Stouts, but depending on the brewery could have had a higher ABV because it had a long secondary with Brett chewing away at it. The difference between domestic and foreign versions were the hopping and length of maturation.

History: Stronger stouts brewed for the export market today, but with a history stretching back to the 18th and 19th centuries when they were more heavily-hopped versions of stronger export stouts. Vatted originally, but Guinness stopped this practice in the 1950s. Guinness Foreign Extra Stout (originally, West India Porter, later Foreign Extra Double Stout) was first brewed in 1801 according to Guinness with “extra hops to give it a distinctive taste and a longer shelf life in hot weather.”

Characteristic Ingredients: Pale and dark roasted malts and grains, historically also could have used brown and amber malts. Hops mostly for bitterness, typically English varieties. May use adjuncts and sugar to boost gravity.

Style Comparison: Similar in balance to an Irish Extra Stout, but with more alcohol. Not as big or intense as an Imperial Stout. Lacking the strong bitterness and high late hops of American Stout. Similar gravity as Tropical Stout, but with a drier finish and higher bitterness.

Vital Statistics:
OG: 1.056 – 1.075
IBUs: 50 – 70
SRM: 30 – 40
FG: 1.010 – 1.018
ABV: 6.3 – 8.0%

Commercial Examples: Coopers Best Extra Stout, Guinness Foreign Extra Stout, The Kernel Export Stout London 1890, La Cumbre Malpais Stout, Pelican Tsunami Export Stout, Ridgeway Foreign Export Stout

Tags: high-strength, dark-color, top-fermented, british-isles, traditional-style, stout-family, balanced, roasty

17. STRONG BRITISH ALE

This category contains stronger, non-roasty ales of the British Isles. Covers the style space above bitters, milds, and brown ales while excluding porters and stouts.

17A. British Strong Ale

Overall Impression: An ale of respectable alcoholic strength, traditionally bottled-conditioned and cellared. Can have a wide range of interpretations, but most will have varying degrees of malty richness, late hops and bitterness, fruity esters, and alcohol warmth. The malt and adjunct flavors and intensity can vary widely, but any combination should result in an agreeable palate experience.

Aroma: Malty-sweet with fruity esters, often with a complex blend of dried-fruit, caramel, nuts, toffee, or other specialty malt aromas. Some alcohol notes are acceptable, but shouldn't be hot or solventy. Hop aromas can vary widely, but typically have earthy, resinous, or floral notes. The balance can vary widely, but most examples will have a blend of malt, fruit, hops, and alcohol in varying intensities.

Appearance: Amber to dark reddish-brown color; many are fairly dark. Generally clear, although darker versions may be almost opaque. Moderate to low cream- to light tan-colored head with average retention.

Flavor: Medium to high malt character often rich with nutty, toffee, or caramel flavors. Light chocolate notes are sometimes found in darker beers. May have interesting flavor complexity from brewing sugars. Balance is often malty, but may be well hopped, which affects the impression of maltiness. Moderate fruity esters are common, often with a dark fruit or dried fruit character. The finish may vary from medium dry to somewhat sweet. Alcoholic strength should be evident, not overwhelming. Low diacetyl optional, but generally not desirable.

Mouthfeel: Medium to full, chewy body. Alcohol warmth is often evident and always welcome. Low to moderate carbonation. Smooth texture.

Comments: An entry category more than a style; the strength and character of examples can vary widely. Fits in the style space between normal gravity beers and Barley Wines. Can include pale malty-hoppy beers, English winter warmers, strong dark milds, smaller Burton ales, and other unique beers in the general gravity range that don't fit other categories. Judges should allow for a significant range in character, as long as the beer is within the alcohol strength range and has an interesting 'British' character, it likely fits the style.

History: A collection of unrelated minor styles, each of which has its own heritage. Do not use this category grouping to infer a historical relationship between examples – none is intended. This is a modern British specialty judging category where the 'special' attribute is alcohol level.

Characteristic Ingredients: Grists vary, often based on pale malt with caramel and specialty malts. Some darker examples suggest a light use of dark malts (e.g., chocolate, black malt). Sugary and starchy adjuncts (e.g., maize, flaked barley, wheat) are common. Finishing hops are traditionally English.

Style Comparison: Significant overlap in gravity with Old Ale, but not having an aged character. A wide range of interpretations is possible. Should not be as rich or strong as an English Barley Wine. Stronger than the stronger everyday Strong Bitter, British Brown Ale, and English Porter. More specialty malt or sugar character than American Strong Ale.

Vital Statistics: OG: 1.055 – 1.080
IBUs: 30 – 60 FG: 1.015 – 1.022
SRM: 8 – 22 ABV: 5.5 – 8.0%

Commercial Examples: Fuller's 1845, Harvey's Elizabethan Ale, J.W. Lees Moonraker, McEwan's Champion, Samuel Smith's Winter Welcome, Shepherd Neame 1698

Tags: high-strength, amber-color, top-fermented, british-isles, traditional-style, strong-ale-family, malty

17B. Old Ale

Overall Impression: A stronger-than-average English ale, though usually not as strong or rich as an English Barley Wine, but usually malty. Warming. Shows positive maturation effects of a well-kept, aged beer.

Aroma: Malty-sweet with fruity esters, often with a complex blend of dried fruit, vinous, caramel, molasses, toffee, light treacle, or other specialty malt aromas. Some alcohol and nutty oxidative notes are acceptable, akin to those found in Sherry, Port, or Madeira. Hop aroma not usually present.

Appearance: Deep amber to very dark reddish-brown color, but most are fairly dark. Age and oxidation may darken the beer further. Clear, but can be almost opaque. Moderate to low cream- to light tan-colored head; retention average to poor.

Flavor: Medium to high malt character with a luscious malt complexity, often with nut, caramel, or molasses-like flavors. Light chocolate or roasted malt flavors are optional, but should never be prominent. Balance is often malty-sweet, but may be well hopped; the impression of bitterness often depends on amount of aging. Moderate to high fruity esters are common, and may take on a dried-fruit or vinous character. The finish may vary from dry to somewhat sweet. Extended aging may contribute oxidative flavors similar to a fine old Sherry, Port, or Madeira. Alcoholic strength should be evident, though not overwhelming. Low diacetyl optional.

Mouthfeel: Medium to full, chewy body, although older examples may be lower in body due to continued attenuation during conditioning. Alcohol warmth is often evident and always welcome. Low to moderate carbonation, depending on age and conditioning. Light acidity may be present, as well as some tannin if wood-aged; both are optional.

Comments: Strength and character vary widely. The predominant defining quality for this style is the impression of age, which can manifest itself in different ways (complexity, oxidation, leather, vinous qualities, etc.). Many of these qualities are otherwise faults, but if the resulting character of the beer is pleasantly drinkable and complex, then those characteristics are acceptable. In no way should those allowable characteristics be interpreted as making an undrinkably off-flavored beer as somehow in style. Old Peculier is a well-known but fairly unique beer that is quite different than other Old Ales.

History: Historically, an aged ale used as stock ales for blending or enjoyed at full strength (stale or stock refers to beers that were aged or stored for a significant period of time). There are at least two definite types in Britain today, weaker, unaged draught ones that are similar to milds of around 4.5%, and stronger aged ones that are often 6-8% or more.

Characteristic Ingredients: Composition varies, although generally similar to British Strong Ales. The age character is the biggest driver of the final style profile, which is more handling than brewing.

Style Comparison: Roughly overlapping the British Strong Ale and the lower end of the English Barley Wine styles, but always having an aged quality. The distinction between an Old Ale and a Barley Wine is somewhat arbitrary above 7% ABV, and generally means having a more significant aged quality.

Vital Statistics: OG: 1.055 – 1.088
IBUs: 30 – 60 FG: 1.015 – 1.022
SRM: 10 – 22 ABV: 5.5 – 9.0%

Commercial Examples: Avery Old Jubilation, Berlina Old Ale, Greene King Strong Suffolk Ale, Marston Owd Roger, Theakston Old Peculier

Tags: high-strength, amber-color, top-fermented, british-isles, traditional-style, strong-ale-family, malty, aged

17C. Wee Heavy

See Category 14 Scottish Ale introduction for general characteristics of Scottish beer.

Overall Impression: Rich, sweet malt depth with caramel, toffee, and fruity flavors. Full-bodied and chewy, with warming alcohol. Restrained bitterness, but not cloying or syrupy.

Aroma: Strong bread-like malt, with a high caramel and toffee aspect. A wide range of supportive caramelized sugar and toasty bread type aromas are possible (toasted breadcrumbs, ladyfingers, English biscuits, graham crackers, nougat, butterscotch, etc.). Faint hint of roast is sometimes noted. Low to moderate dark or dried fruit esters and alcohol. Very low earthy, floral, orange-citrus, or spicy hops optional.

Appearance: Light copper to dark brown color, often with deep ruby highlights. Clear. Usually has a large tan head, which may not persist. Legs may be evident in stronger versions.

Flavor: Rich, bread-like malt that is often full and sweet on the palate with caramel and toffee flavors, but balanced by alcohol and a hint of grainy roast in the finish. The malt often has caramelized sugar and toasty flavors of the same type as described in the aroma. Medium to low alcohol and esters (plums, raisins, dried fruit, etc.). Bitterness low in the balance, giving a sweet to medium-dry finish. Medium-low hop flavor optional, with similar descriptors as the aroma.

Mouthfeel: Medium-full to full-bodied, sometimes with a thick, chewy, sometimes creamy, viscosity. A smooth alcohol warmth is usually present and is desirable since it balances the malty sweetness. Moderate carbonation.

Comments: A range of strengths is allowable; not all versions are very strong. Also known as “Strong Scotch Ale,” the term “wee heavy” means “small strong” and traces to the beer that made the term famous, Fowler’s Wee Heavy, a 12 Guinea Ale.

History: Descended from Edinburgh Ales, a stronger malty beer brewed in a range of strengths, similar to Burton Ale (although at half the hopping rate). Modern versions have two main variants, a more modest 5% ABV beer and the more widely known 8-9% ABV beer. As gravities decreased over time, some of the variations ceased to be produced.

Characteristic Ingredients: Scottish pale ale malt, a wide range of other ingredients are possible, including adjuncts. Some may use crystal malt or darker grains for color. *No peat-smoked malt.*

Style Comparison: Somewhat similar to an English Barley Wine, but often darker and more caramelly.

Vital Statistics: OG: 1.070 – 1.130
IBUs: 17 – 35 FG: 1.018 – 1.040
SRM: 14 – 25 ABV: 6.5 – 10.0%

Commercial Examples: Belhaven Wee Heavy, Broughton Old Jock, McEwan’s Scotch Ale, Orkney Skull Splitter, Traquair House Ale, The Duck-Rabbit Wee Heavy Scotch-Style Ale

Tags: high-strength, amber-color, top-fermented, british-isles, traditional-style, strong-ale-family, malty

17D. English Barley Wine

Overall Impression: A strong and richly malty ale with a pleasant fruity or hoppy depth. A wintertime sipper with a full, chewy body and warming alcohol.

Aroma: Very rich, strongly malty, often with a caramel-like aroma in darker versions or a light toffee character in paler versions. May have a rich character including bread-like, toasty, or toffee notes. May have moderate to strong fruitiness, often with a dark- or dried-fruit character, particularly in dark versions. The hop aroma may range from mild to assertive, and is typically floral, earthy, tea-like, or marmalade-like. Alcohol may be low to moderate, but are soft and rounded. Aromatic intensity subsides with age, and can develop a quality like sherry, wine, or port.

Appearance: Color ranging from golden amber to dark brown, often with ruby highlights and significant depth of color. Should not be black or opaque. Low to moderate off-white head. May have low head retention. Brilliant clarity, particularly when aged, although younger versions can have a little haze. High alcohol and viscosity may be visible as legs.

Flavor: Medium to high rich, malty sweetness, often complex and multi-layered, with bread, biscuit, and caramel malt flavors (more toffee-like in paler versions) and having a medium to high fruitiness (often with dark or dried fruit aspects). When aged, these fruity components come out more, and darker versions will have a higher level than paler ones. The hop aroma, flavor, and bitterness can vary wildly. Light to strong hops, with an English character (floral, earthy, tea, or marmalade-like) are common. Bitterness can be light to fairly strong, fading with time, so the balance can be malty to somewhat bitter. Stronger versions will have a little alcohol character. The finish and aftertaste can be moderately dry to moderately sweet, often depending on age.

Some oxidative or vinous flavors may be present, and often complex alcohol flavors should be evident. Pale versions typically seem more bitter, better attenuated, and more hop-forward than darker versions.

Mouthfeel: Full-bodied and chewy, with a velvety, luscious texture, declining with age. A smooth warmth from aged alcohol should be present, but shouldn’t burn. Carbonation may be low to moderate, depending on age and conditioning.

Comments: The richest and strongest of modern English Ales. Their character can change significantly over time; both young and old versions should be appreciated for what they are. The malt profile can vary widely; not all examples will have all possible flavors or aromas. Paler varieties won’t have the caramel and richer malt flavors, nor will they typically have the darker dried fruits – don’t expect flavors and aromatics that are impossible from a beer of that color. Typically written as “Barley Wine” in the UK, and “Barleywine” in the US.

History: A modern descendent of the strongest Burton Ales. Bass No. 1 was first called a barley wine in 1872. Traditionally a darker beer until Tennant (now Whitbread) first produced Gold Label, a gold-colored version in 1951. The original style

that inspired derivative variations in Belgium, the United States, and elsewhere in the world.

Characteristic Ingredients: British pale ale and crystal malts. Limited use of dark malts. Often uses brewing sugars. English hops. British yeast.

Style Comparison: Less hoppy and bitter, maltier and fruitier than American Barleywine. Can overlap Old Ale on the lower end of the range, but without heavier signs of age. Not as caramelly and often not as sweet as a Wee Heavy.

Vital Statistics: OG: 1.080 – 1.120
IBUs: 35 – 70 FG: 1.018 – 1.030
SRM: 8 – 22 ABV: 8.0 – 12.0%

Commercial Examples: Burton Bridge Thomas Sykes Old Ale, Coniston No. 9 Barley Wine, Fuller's Golden Pride, Hogs Back A over T, J.W. Lee's Vintage Harvest Ale, Robinson's Old Tom

Tags: very-high-strength, amber-color, top-fermented, british-isles, traditional-style, strong-ale-family, malty

18. PALE AMERICAN ALE

This category contains modern American ales of average strength and light color that are moderately malty to moderately bitter.

18A. Blonde Ale

Overall Impression: Easy-drinking, approachable, malt-oriented American craft beer, often with interesting fruit, hop, or character malt notes. Well-balanced and clean, is a refreshing pint without aggressive flavors.

Aroma: Light to moderate malty aroma, generally neutral or grainy, possibly with a light bread or caramel note. Low to moderate fruitiness is optional, but acceptable. May have a low to medium hop aroma, and can reflect almost any hop variety although citrusy, floral, fruity, and spicy notes are common. Clean fermentation profile.

Appearance: Light yellow to deep gold in color. Clear to brilliant. Low to medium white head with fair to good retention.

Flavor: Initial soft maltiness, but can also have light character malt flavor (e.g., bread, toast, biscuit, wheat). Caramel flavors usually absent; if present, they are typically low-color caramel or honey notes. Low to medium fruity esters optional, but are welcome. Light to moderate hop flavor (any variety), but shouldn't be overly aggressive. Medium-low to medium bitterness, but the balance is normally towards the malt or even between malt and hops. Finishes medium-dry to slightly malty; an impression of sweetness is often an expression of lower bitterness than actual residual sweetness. Clean fermentation profile.

Mouthfeel: Medium-light to medium body. Medium to high carbonation. Smooth without being heavy.

Comments: Oxidized versions can develop caramel or honey notes, which should not be mistaken for similar malt-derived flavors. Sometimes known as Golden Ale or simply a Gold.

History: An American craft beer style produced as a faster-produced alternative to standard American lagers. First believed to be produced in 1987 at Catamount. Often positioned as an entry-level house ale.

Characteristic Ingredients: Generally all-malt, but can include wheat malt or sugar adjuncts. Any hop variety can be used. Clean American, lightly fruity English, or Kölsch yeast. May also be made with lager yeast, or cold-conditioned.

Style Comparison: Typically has more flavor than American Lager and Cream Ale. Less bitterness than an American Pale Ale. Perhaps similar to some maltier examples of Kölsch.

Vital Statistics: OG: 1.038 – 1.054
IBUs: 15 – 28 FG: 1.008 – 1.013
SRM: 3 – 6 ABV: 3.8 – 5.5%

Commercial Examples: Firestone Walker 805, Kona Big Wave Golden Ale, Real Ale Firemans #4 Blonde Ale, Russian River Aud Blonde, Victory Summer Love, Widmer Citra Summer Blonde Brew

Tags: standard-strength, pale-color, any-fermentation, north-america, craft-style, pale-ale-family, balanced

18B. American Pale Ale

Overall Impression: An average-strength, hop-forward, pale American craft beer with sufficient supporting malt to make the beer balanced and drinkable. The clean hop presence can reflect classic or modern American or New World hop varieties with a wide range of characteristics.

Aroma: Moderate to moderately-high hop aroma from American or New World hop varieties with a wide range of possible characteristics, including citrus, floral, pine, resin, spice, tropical fruit, stone fruit, berry, or melon. None of these specific characteristics are required, but a hoppy aroma should be apparent. Low to moderate neutral to grainy maltiness supports the hop presentation, and can show low amounts of specialty malt character (e.g., bread, toast, biscuit, caramel). Fruity esters optional, up to moderate in strength. Fresh dry-hop aroma optional.

Appearance: Pale golden to amber. Moderately large white to off-white head with good retention. Generally quite clear.

Flavor: Hop and malt character similar to aroma (same intensities and descriptors apply). Caramel flavors are often absent or fairly restrained, but are acceptable as long as they don't clash with the hops. Moderate to high bitterness. Clean fermentation profile. Fruity yeast esters can be moderate to none, although many hop varieties are quite fruity. Medium to dry finish. The balance is typically towards the late hops and bitterness; the malt presence should be supportive, not distracting. Hop flavor and bitterness often linger into the finish, but the aftertaste should generally be clean and not harsh. Fresh dry-hop flavor optional.

Mouthfeel: Medium-light to medium body. Moderate to high carbonation. Overall smooth finish without astringency or harshness.

Comments: Modern American versions are often just lower gravity IPAs. Traditionally was a style that allowed for experimentation with hop varieties and usage methods, which can now often be found as international adaptations in countries with an emerging craft beer market. Judges should allow for characteristics of modern American or New World hops as they are developed and released.

History: A modern American craft beer era adaptation of English pale ale, reflecting indigenous ingredients. Sierra Nevada Pale Ale was first made in 1980 and helped popularize the style. Prior to the explosion in popularity of IPAs, this style was the most well-known and popular of American craft beers.

Characteristic Ingredients: Neutral pale malt. American or New World hops. Neutral to lightly fruity American or English ale yeast. Small amounts of various specialty malts.

Style Comparison: Typically lighter in color, cleaner in fermentation profile, and having fewer caramel flavors than English counterparts. There can be some overlap in color between American Pale Ale and American Amber Ale. The American Pale Ale will generally be cleaner, have a less caramelly malt profile, less body, and often more finishing hops. Less bitterness in the balance and alcohol strength than an American IPA. Maltier, more balanced and drinkable, and less intensely hop-focused and bitter than session-strength

American IPAs (aka Session IPAs). More bitter and hoppy than a Blonde Ale.

Vital Statistics: OG: 1.045 – 1.060
IBUs: 30 – 50 FG: 1.010 – 1.015
SRM: 5 – 10 ABV: 4.5 – 6.2%

Commercial Examples: Deschutes Mirror Pond Pale Ale, Half Acre Daisy Cutter Pale Ale, Great Lakes Burning River, La Cumbre Acclimated APA, Sierra Nevada Pale Ale, Stone Pale Ale 2.0

Tags: standard-strength, pale-color, top-fermented, north-america, craft-style, pale-ale-family, bitter, hoppy

19. AMBER AND BROWN AMERICAN BEER

This category contains modern American amber and brown top-fermented ales and warm-fermented lagers of standard strength that can be balanced to bitter.

19A. American Amber Ale

Overall Impression: An amber, hoppy, moderate-strength American craft beer with a malty caramel flavor. The balance can vary quite a bit, with some versions being fairly malty and others being aggressively hoppy. Hoppy and bitter versions should not have clashing flavors with the caramel malt profile.

Aroma: Low to moderate hop aroma reflective of American or New World hop varieties (citrus, floral, pine, resin, spice, tropical fruit, stone fruit, berry, or melon). A citrusy hop character is common, but not required. Moderately-low to moderately-high maltiness, usually with a moderate caramel character, that can either support, balance, or sometimes mask the hop presentation. Esters vary from moderate to none.

Appearance: Deep amber to coppery-brown in color, sometimes with a reddish hue. Moderately large off-white head with good retention. Generally quite clear.

Flavor: Moderate to high hop flavor with similar characteristics as the aroma. Malt flavors are moderate to strong, and usually show an initial malty sweetness followed by a moderate caramel flavor and sometimes toasty or biscuity malt flavors in lesser amounts. Dark or roasted malt flavors absent. Moderate to moderately-high bitterness. Balance can vary from somewhat malty to somewhat bitter. Fruity esters can be moderate to none. Caramel sweetness, hop flavor, and bitterness can linger somewhat into the medium to full yet dry finish.

Mouthfeel: Medium to medium-full body. Medium to high carbonation. Overall smooth finish without astringency. Stronger versions may have a slight alcohol warmth.

Comments: Can overlap in color with darker American pale ales, but with a different malt flavor and balance. A range of balance exists in this style, from balanced and malty to more aggressively hopped.

History: A modern American craft beer style developed as a variation from American Pale Ales. Mendocino Red Tail Ale was first made in 1983, and was known regionally as a Red Ale. This served as the progenitor of Double Reds (American Strong Ale), Red IPAs, and other hoppy, caramelly beers.

Characteristic Ingredients: Neutral pale ale malt. Medium to dark crystal malts. American or New World hops, often with citrusy flavors, are common but others may also be used. Neutral to lightly estery yeast.

Style Comparison: Darker, more caramelly, more body, and generally less bitter in the balance than American Pale Ales. Less alcohol, bitterness, and hop character than Red IPAs. Less strength, malt, and hop character than American Strong Ales. Less chocolate and dark caramel than an American Brown Ale.

Vital Statistics: OG: 1.045 – 1.060
IBUs: 25 – 40 FG: 1.010 – 1.015
SRM: 10 – 17 ABV: 4.5 – 6.2%

Commercial Examples: Anderson Valley Boont Amber Ale, Bell's Amber Ale, Full Sail Amber, North Coast Red Seal Ale, Saint Arnold Amber Ale, Tröegs Hopback Amber Ale

Tags: standard-strength, amber-color, top-fermented, north-america, craft-style, amber-ale-family, balanced, hoppy

19B. California Common

Overall Impression: A toasty and caramelly, fairly bitter, standard-strength beer with an interesting fruitiness and rustic, woody hop character. Smooth and well carbonated.

Aroma: Moderate to high herbal, resinous, floral, or minty hops. Light fruitiness acceptable. Low to moderate caramel or toasty malt supports the hops.

Appearance: Medium amber to light copper color. Generally clear. Moderate off-white head with good retention.

Flavor: Moderately malty with a pronounced hop bitterness. The malt character usually has toast (not roast) and caramel flavors. Low to moderately high hop flavor, usually showing rustic, traditional American hop qualities (often herbal, resinous, floral, minty). Finish fairly dry and crisp, with a lingering hop bitterness and a firm, grainy malt flavor. Light fruity esters are acceptable, but otherwise clean.

Mouthfeel: Medium-bodied. Medium to medium-high carbonation.

Comments: This style is narrowly defined around the prototypical Anchor Steam example, although allowing other typical ingredients of the era. Northern Brewer hops are not a strict requirement for the style. Modern American and New World-type hops (especially citrusy ones) are inappropriate.

History: American West Coast original, brewed originally as Steam Beer during the Gold Rush era. Large shallow open fermenters (coolships) were used to compensate for the lack of refrigeration and to take advantage of the cool temperatures in

the San Francisco Bay area. Modern versions are based on Anchor Brewing re-launching the style in the 1970s.

Characteristic Ingredients: Pale ale malt, non-citrusy hops (often Northern Brewer), small amounts of toasted malt or crystal malts. Lager yeast; however, some strains (often with the mention of “California” in the name) work better than others at the warmer fermentation temperatures (55 to 60 °F) typically used. Note that some German yeast strains produce inappropriate sulfury character.

Style Comparison: Superficially similar to an American Amber Ale, but with specific choices for malt and hopping – the hop flavor and aroma is traditional (not modern) American hops, malt flavors are toastier, the hopping is always assertive, and a warm-fermented lager yeast is used. Less attenuated, less carbonated and less fruity than Australian Sparkling ale.

Vital Statistics: OG: 1.048 – 1.054
IBUs: 30 – 45 FG: 1.011 – 1.014
SRM: 9 – 14 ABV: 4.5 – 5.5%

Commercial Examples: Anchor Steam, Steamworks Steam Engine Lager

Tags: standard-strength, amber-color, bottom-fermented, north-america, traditional-style, amber-lager-family, bitter, hoppy

19C. American Brown Ale

Overall Impression: A malty but hoppy standard-strength American ale frequently with chocolate and caramel flavors. The hop flavor and aroma complement and enhance the malt rather than clashing with it.

Aroma: Moderate malty-sweet to malty-rich aroma with chocolate, caramel, nutty, or toasty qualities. Hop aroma is typically low to moderate, of almost any type that complements the malt. Some interpretations of the style may optionally feature a stronger hop aroma, an American or New World hop character (citrusy, fruity, tropical, etc.), or a dry-hopped aroma. Fruity esters are moderate to very low. The dark malt character is more robust than other brown ales, yet stops short of being overly Porter-like.

Appearance: Light to very dark brown color. Clear. Low to moderate off-white to light tan head.

Flavor: Medium to moderately-high malty-sweet or malty-rich flavor with chocolate, caramel, nutty, or toasty malt

complexity, with medium to medium-high bitterness. Medium to medium-dry finish with an aftertaste of both malt and hops. Light to moderate hop flavor, sometimes citrusy, fruity, or tropical, although any hop flavor that complements the malt is acceptable. Very low to moderate fruity esters. The malt and hops are generally equal in intensity, but the balance can vary in either direction. Should not have a roasted character suggestive of a Porter or Stout.

Mouthfeel: Medium to medium-full body. More bitter versions may have a dry, resinous impression. Moderate to moderately-high carbonation. Stronger versions may be lightly warming.

Comments: Most commercial American Browns are not as aggressive as the original homebrewed versions, and some modern craft-brewed examples. This style reflects the current commercial offerings typically marketed as American Brown Ales rather than the hoppier, stronger homebrew versions from the early days of homebrewing. These IPA-strength brown ales should be entered as *21B Specialty IPA: Brown IPA*.

History: An American style from the early modern craft beer era. Derived from English Brown Ales, but with more hops. Pete’s Wicked Ale (1986) defined the style, which was first judged at the Great American Beer Festival in 1992.

Characteristic Ingredients: Pale malt, plus crystal and darker malts (typically chocolate). American hops are typical, but continental or New World hops can also be used.

Style Comparison: More chocolate and caramel flavors than American Pale or Amber Ales, typically with less prominent bitterness in the balance. Less bitterness, alcohol, and hop character than Brown IPAs. More bitter and generally hoppier than English Brown Ales, with a richer malt presence, usually higher alcohol, and American or New World hop character.

Vital Statistics: OG: 1.045 – 1.060
IBUs: 20 – 30 FG: 1.010 – 1.016
SRM: 18 – 35 ABV: 4.3 – 6.2%

Commercial Examples: Avery Ellie’s Brown Ale, Big Sky Moose Drool Brown Ale, Brooklyn Brown Ale, Bell’s Best Brown, Smuttynose Old Brown Dog Ale, Telluride Face Down Brown

Tags: standard-strength, dark-color, top-fermented, north-america, craft-style, brown-ale-family, balanced, hoppy

20. AMERICAN PORTER AND STOUT

These beers all evolved from their English namesakes to be wholly transformed by American craft brewers. Generally, these styles are bigger, stronger, more roast-forward, and more hop-centric than their traditional Anglo cousins. These styles are grouped together due to a similar shared history and flavor profile.

20A. American Porter

Overall Impression: A malty, bitter, and often somewhat hoppy dark beer with a balanced, roasted, and frequently chocolatey character.

Aroma: Medium-light to medium-strong roast aroma, often with a chocolate, light coffee, or lightly burnt character, sometimes with a background caramel or toffee sweetness, or a malty richness. The resinous, earthy, or floral hop character can vary from low to high. Moderate fruity esters optional. Should not seem sharp, acrid, or acidic. The malt-hop balance can vary, but it should always have a roasted malt aroma.

Appearance: Medium brown to very dark brown, often with ruby- or garnet-like highlights. Can approach black in color. Clear, if not opaque. Full, tan-colored head with moderately good head retention.

Flavor: Moderately strong roasted flavor, often with a chocolate and lightly burnt character, sometimes with a sweet caramel or malty richness in support. Medium to high bitterness, and a dry to medium-sweet finish. Dark malts may sharpen this impression, but should not add an acrid, burnt, or harsh flavor. Low to high resinous, earthy, or floral hop flavor, which should not clash with the dark malt. Dry-hopped versions may have a fresh hop or resinous flavor. Moderate fruity esters optional. Should not have an acidic bite.

Mouthfeel: Medium to medium-full body. Moderately low to moderately high carbonation. Stronger versions may have a slight alcohol warmth. May have a slight dark malt astringency, but this character should not be strong.

Comments: Sometimes called Robust Porter, becoming increasingly hard to find. A rather broad style open to interpretation by the brewer. Dark malt intensity and flavor can vary significantly. May or may not have a strong hop character, or significant fermentation byproducts; thus may seem to have an “American” or “British” character.

History: A stronger, more aggressive version of earlier Pre-Prohibition Porters or English Porters, first brewed in the modern craft beer era (introduced in 1974). This style describes the modern craft version; see Historical Beer: Pre-Prohibition Porter for the older US version.

Characteristic Ingredients: Pale base malt, frequently crystal malt. Dark malts, often black malt or chocolate malt. American hops typically used for bittering, but US or UK finishing hops can be used. Ale yeast can either be clean US versions or characterful English varieties.

Style Comparison: More bitter and often stronger with more dark malt qualities and dryness than English Porters or Pre-Prohibition Porters. Less strong and assertive than American Stouts.

Vital Statistics: OG: 1.050 – 1.070
IBUs: 25 – 50 FG: 1.012 – 1.018
SRM: 22 – 40 ABV: 4.8 – 6.5%

Commercial Examples: Anchor Porter, Bell’s Porter, Deschutes Black Butte Porter, Great Lakes Edmund Fitzgerald Porter, Sierra Nevada Porter, Smuttynose Robust Porter

Tags: standard-strength, dark-color, top-fermented, north-america, craft-style, porter-family, bitter, roasty, hoppy

20B. American Stout

Overall Impression: A fairly strong, highly roasted, bitter, hoppy dark stout. The body and dark flavors typical of stouts with a more aggressive American hop character and bitterness.

Aroma: Moderate to strong roast aroma, often with a roasted coffee or dark chocolate quality. Burnt or charcoal aromas are acceptable at low levels. Medium to very low hop aroma, often with a citrusy or resinous character. Medium esters optional. Light alcohol optional. Should not seem sharp, acrid, or acidic.

Appearance: Generally a jet black color, although some may appear very dark brown. Large, persistent head of light tan to light brown in color. Usually opaque.

Flavor: Moderate to very high roasted flavors, often tasting of coffee, dark or bittersweet chocolate, or roasted coffee beans. May taste of slightly burnt coffee grounds, but this character should not be prominent. Low to medium malt sweetness, often with rich chocolate or caramel flavors. Medium to high bitterness. Low to high hop flavor, generally citrusy or resinous. Medium to dry finish, occasionally with a lightly burnt quality. Low esters optional. Light but smooth alcohol flavor optional.

Mouthfeel: Medium to full body. Can be somewhat creamy. Can have a bit of roast-derived astringency, but this character should not be excessive. Medium-high to high carbonation. Light to moderately strong alcohol warmth, but smooth and not excessively hot.

Comments: Breweries express individuality through varying the roasted malt profile, malt sweetness and flavor, and the amount of finishing hops used. Generally has bolder roasted malt flavors and hopping than other traditional stouts (except Imperial Stouts). Becoming increasingly hard to find.

History: A modern craft beer and homebrew style that applied a more aggressive American hopping regime to a strong traditional English or Irish Stout. The homebrew version was once known as West Coast Stout, a common naming scheme for a more highly-hopped beer.

Characteristic Ingredients: Common American base malts, yeast, and hops. Varied use of dark and roasted malts, as well as caramel-type malts. Adjuncts or additives may be present in low quantities to add complexity.

Style Comparison: Like a hoppy, bitter, strongly roasted Irish Extra Stout. Much more roast and body than a Black IPA. Bigger, stronger versions belong in the Imperial Stout style. Stronger and more assertive, particularly in the dark malt or grain additions and hop character, than American Porter.

Vital Statistics: OG: 1.050 – 1.075
IBUs: 35 – 75 FG: 1.010 – 1.022
SRM: 30 – 40 ABV: 5.0 – 7.0%

Commercial Examples: Avery Out of Bounds Stout, Bell’s Kalamazoo Stout, Deschutes Obsidian Stout, Sierra Nevada Stout, Trillium Secret Stairs

Tags: high-strength, dark-color, top-fermented, north-america, craft-style, stout-family, bitter, roasty, hoppy

20C. Imperial Stout

Traditionally an English style, but it is currently much more popular and widely available in America and internationally, where it is a craft beer favorite, not a historical curiosity.

Overall Impression: An intensely-flavored, very strong, very dark stout with a broad range of interpretations. Roasty-burnt malt with a depth of dark or dried fruit flavors, and a warming, bittersweet finish. Despite the intense flavors, the components need to meld together to create a complex, harmonious beer, not a hot mess – sometimes only accomplished with age.

Aroma: Rich, deep, complex, and often quite intense, with a pleasant blend of roast, fruit, hops, and alcohol. Light to moderately strong roast can have a coffee, bittersweet or dark chocolate, cocoa, black licorice, tar, or slightly burnt grain quality, sometimes with a light caramel sweetness or toasty maltiness. Low to moderately strong esters often perceived as dark or dried fruits like plums, prunes, figs, black currants, or raisins. Very low to fairly aggressive hops, often English or American in character. Alcohol flavor optional, but should not be sharp, hot, or solventy. The balance between these main four components can vary greatly; not all need to be noticeable, but those present should have a smooth interplay. Age can add another dimension, including a vinous or port-like impression, but not sourness. Age can decrease aroma intensity.

Appearance: Color ranges from very dark reddish-brown to jet black. Opaque. Deep tan to dark brown head. Generally has a well-formed head, although head retention may be low to moderate. High alcohol and viscosity may be visible as legs.

Flavor: Like the aroma, a complex mix of roast, fruit, hops, and alcohol (same descriptors apply). The flavors can be quite intense, often greater than in the aroma, but the same warning about the balance varying greatly still applies. Medium to aggressively high bitterness. The maltiness balances and supports the other flavors, and may have qualities of bread, toast, or caramel. The palate and finish can be fairly dry to moderately sweet, an impression that often changes with age. Should not be syrupy or cloying. Aftertaste of roast, bitterness, and warmth. Same age effects as in the aroma apply.

Mouthfeel: Full to very full-bodied and chewy, with a velvety, luscious texture. The body and texture may decline with age.

Gentle, smooth warmth should be present and noticeable, but as a background character. Low to moderate carbonation.

Comments: Sometimes known as Russian Imperial Stout or RIS. Varying interpretations exist with American versions having greater bitterness, and more roasted character and late hops, while English varieties often reflect a more complex specialty malt character with a more forward ester profile. Not all Imperial Stouts have a clearly 'English' or 'American' character; anything in between is allowable as well, which is why it is counter-productive to define strict sub-types. Judges must be aware of the broad range of the style, and not try to judge all examples as clones of a specific commercial beer.

History: A style with a long, although not necessarily continuous, heritage. Traces roots to strong English porters brewed for export in the 1700s, and said to have been popular with the Russian Imperial Court. After the Napoleonic wars interrupted trade, these beers were increasingly sold in England. The style eventually all but died out, until being popularly embraced in the modern craft beer era in England as a revival export and in the United States as an adaptation by extending the style with American characteristics.

Characteristic Ingredients: Pale malt with significant roasted malts or grain. Flaked adjuncts common. American or English ale yeast and hops are typical. Ages very well. Increasingly used as the base beer for many specialty styles.

Style Comparison: Darker and more roasty than Barleywines, but with similar alcohol. More complex, with a broader range of possible flavors, than lower-gravity stouts.

Vital Statistics:

OG:	1.075 – 1.115
IBUs:	50 – 90
SRM:	30 – 40
FG:	1.018 – 1.030
ABV:	8.0 – 12.0%

Commercial Examples: **American** – Bell's Expedition Stout, Great Divide Yeti Imperial Stout, North Coast Old Rasputin Imperial Stout, Oskar Blues Ten Fidy, Sierra Nevada Narwhal Imperial Stout; **English** – 2SP Brewing Co The Russian, Courage Imperial Russian Stout, Le Coq Imperial Extra Double Stout, Samuel Smith Imperial Stout, Thornbridge Saint Petersburg

Tags: very-high-strength, dark-color, top-fermented, british-isles, north-america, traditional-style, craft-style, stout-family, malty, bitter, roasty

21. IPA

The IPA category is for modern American IPAs and their derivatives. This does not imply that English IPAs aren't proper IPAs or that there isn't a relationship between them. This is simply a method of grouping similar styles for competition purposes. English IPAs are grouped with other English-derived beers, and the stronger Double IPA is grouped with stronger American beers. The term "IPA" is intentionally not spelled out as "India Pale Ale" since none of these beers historically went to India, and many aren't pale. However, the term IPA has come to be a balance-defined style in modern craft beer.

21A. American IPA

Overall Impression: A decidedly hoppy and bitter, moderately strong, pale American ale. The balance is hop-forward, with a clean fermentation profile, dryish finish, and clean, supporting malt allowing a creative range of hop character to shine through.

Aroma: A prominent to intense hop aroma often featuring American or New World hop characteristics, such as citrus, floral, pine, resin, spice, tropical fruit, stone fruit, berry, or melon. Low to medium-low clean, grainy maltiness supports the hop presentation. Generally clean fermentation profile, but light fruitiness acceptable. Restrained alcohol optional.

Appearance: Color ranging from medium gold to light reddish-amber. Clear, but light haze allowable. Medium-sized, white to off-white head with good persistence.

Flavor: Medium to very high hop flavor (same descriptors as aroma). Low to medium-low clean and grainy maltiness, possibly with light caramel and toast flavors. Medium-high to very high bitterness. Dry to medium-dry finish. Hoppy, bitter aftertaste with supportive malt. Low esters optional. Background clean alcohol flavor optional.

Mouthfeel: Medium-light to medium body, with a smooth texture. Medium to medium-high carbonation. No harshness. Very light, smooth warmth optional.

Comments: The basis for many modern variations, including the stronger Double IPA as well as IPAs with various other ingredients. Those other IPAs should generally be entered in the 21B Specialty IPA style. An India Pale Lager (IPL) can be entered as an American IPA if it has a similar character, otherwise 34B Mixed-Style Beer. Oak is inappropriate in this style; if noticeably oaked, enter in 33A Wood-Aged Beer. Dry, sharply bitter, clear examples are sometimes known as West Coast IPA, which is really just a type of American IPA.

History: The first modern American craft beer adaptation of this traditional English style is generally believed to be Anchor Liberty Ale, first brewed in 1975 and using whole Cascade hops; the style has evolved beyond that original beer, which now tastes more like an American Pale Ale in comparison. American-made IPAs from earlier eras were not unknown (particularly the well-regarded Ballantine's IPA, an oak-aged beer using an old English recipe). This style is based on the modern craft beer examples.

Characteristic Ingredients: Pale base malt. American or English yeast with a clean or slightly fruity profile. Generally all-malt, but sugar additions are acceptable. Restrained use of crystal malts. Often uses American or New World hops but any are varieties are acceptable; new hop varieties continue to be released and may be used even if they do not have the sensory profiles listed as examples.

Style Comparison: Stronger and more highly hopped than American Pale Ale. Compared to English IPA, has less caramel, bread, and toast; often more American or New World hops; fewer yeast-derived esters; less body and often a more hoppy balance; and is slightly stronger than most examples. Less alcohol than a Double IPA, but with a similar balance.

Vital Statistics: OG: 1.056 – 1.070
IBUs: 40 – 70 FG: 1.008 – 1.014
SRM: 6 – 14 ABV: 5.5 – 7.5%

Commercial Examples: Bell's Two-Hearted Ale, Cigar City Jai Alai, Fat Heads Head Hunter IPA, Firestone Walker Union Jack, Maine Lunch, Russian River Blind Pig IPA

Tags: high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, bitter, hoppy

21B. Specialty IPA

Specialty IPA is a competition entry category, not a distinct style. Beers entered here are not experimental beers; they are a collection of currently-produced types of beer that may or may not have any market longevity. This category also allows for expansion, so potential future IPA variants (St. Patrick's Day Green IPA, Romulan Blue IPA, Zima Clear IPA, etc.) have a place to be entered without rewriting the style guidelines. The only common element is that they have the balance and overall impression of an IPA (typically, an American IPA) but with some minor tweak.

The term 'IPA' is used as a singular descriptor of a type of hoppy, bitter beer. It is not meant to be spelled out as 'India Pale Ale' when used in the context of a Specialty IPA. None of these beers ever historically went to India, and many aren't pale. But the craft beer market knows what to expect in balance when a beer is described as an 'IPA' – so the modifiers used to differentiate them are based on that concept alone.

The Specialty IPA category is not intended for Classic-style IPAs with added ingredients (such as fruit, spice, wood, smoke, grains, or sugars) – these should be entered in the appropriate Specialty-Type beer category (Fruit Beer, SHV Beer, etc.). The Specialty IPA styles are considered Classic Styles for entering in Specialty-Type category purposes. Classic-style IPAs with unique or special hops should still be entered in the appropriate Classic-style IPA style.

Overall Impression: Recognizable as an IPA by balance – a hop-forward, bitter, dryish beer – with something else present to distinguish it from the standard categories. Should have good drinkability, regardless of the form. Excessive harshness and heaviness are typically faults, as are strong flavor clashes between the hops and the other specialty ingredients.

Aroma: Detectable hop aroma is required; characterization of hops is dependent on the specific type of Specialty IPA. Other aromatics may be present; hop aroma is typically the strongest element.

Appearance: Color depends on specific type of Specialty IPA. Most should be clear, but a slight haze is acceptable in most styles. Darker types can be opaque, making clarity irrelevant. Good, persistent head stand with color dependent on the specific type of Specialty IPA.

Flavor: Variable by type, with the quality of each component dependent on the specific Specialty IPA. Hop flavor typically medium-low to high. Hop bitterness typically medium-high to very high. Malt flavor generally low to medium. Commonly has

a medium-dry to dry finish. Some clean alcohol flavor can be noted in stronger versions. Various types of Specialty IPAs can show additional malt and yeast characteristics, depending on the type.

Mouthfeel: Smooth. Medium-light to medium body. Medium carbonation, generally. A background alcohol warmth can be perceived in stronger versions.

Comments: Entrants may use this category for a different strength version of an IPA defined by its own BJCP subcategory (e.g., session-strength American or English IPA) – except where an existing BJCP subcategory already exists for that style (e.g., double [American] IPA). A Session IPA is a 21B Specialty IPA with a base style of 21A American IPA with Session strength. A Double IPA is Category 22A not 21B.

Entry Instructions: Entrant must specify a **strength** (session, standard, double); if no strength is specified, standard will be assumed. Entrant must specify specific **type** of Specialty IPA from the list of Currently Defined Types identified in the Style Guidelines, or as amended by Provisional Styles on the BJCP website; OR the entrant must describe the type of Specialty IPA and its key characteristics in comment form so judges will know what to expect.

Entrants may specify specific **hop varieties** used, if entrants feel that judges may not recognize the varietal characteristics of newer hops. *Entrants may specify a combination of defined IPA types (e.g., Black Rye IPA) without providing additional descriptions.*

Currently Defined Types: *Belgian IPA, Black IPA, Brown IPA, Red IPA, Rye IPA, White IPA, Brut IPA*

Vital Statistics: Variable by type, see individual styles

Strength classifications:

Session – ABV: 3.0 – 5.0%

Standard – ABV: 5.0 – 7.5%

Double – ABV: 7.5 – 10.0%

Specialty IPA: Belgian IPA

Overall Impression: A dry, hoppy IPA with fruitiness and spiciness of Belgian yeast. Often lighter in color and more attenuated, similar to a Belgian Tripel that has been brewed with more hops.

Aroma: Moderate to high hop aroma, often reflecting the character of American or New World hops (tropical, melon, stone fruit, citrus, piney, etc.) or Continental hops (spicy, herbal, floral, etc.), possibly with a light dry-hop note. Gentle malt sweetness, sometimes with a sugary or honey character, but rarely caramel. Moderate to high esters, often pears, apples, citrus, or banana. Light spice, clove or pepper, optional. Light alcohol aroma optional.

Appearance: Light golden to amber in color. Moderate to large off-white head with good retention. Good to quite hazy clarity.

Flavor: Moderate fruity and spicy flavors, same descriptors as aroma. Moderate to high hop flavor, same descriptors as aroma. Light, relatively neutral grainy malt flavor, optionally with low toast, caramel, or honey. Moderate to high bitterness. Dry to medium-dry finish that often accentuates the perception of bitterness. Aftertaste has a lingering bitterness but is not harsh.

Mouthfeel: Light to medium body. Medium to high carbonation level, which can lighten the impression of body. Light warmth optional.

Comments: The choice of yeast strain and hop varieties is critical since many choices will clash horribly.

History: A relatively modern style, dating from the mid-2000s. Homebrewers and craft breweries substituted Belgian yeast in their American IPA recipes. Belgian breweries typically added more hops to their stronger pale beers.

Characteristic Ingredients: Belgian yeast strains used in making Belgian Tripels and Golden Strong Ales. American examples tend to use American or New World hops while Belgian versions tend to use European hops and only pale malt. Sugar adjuncts common.

Style Comparison: A cross between an American IPA or Double IPA with a Belgian Golden Strong Ale or Belgian Tripel. This style is may be spicier, stronger, drier, and fruitier than an American IPA.

Vital Statistics: OG: 1.058 – 1.080

IBUs: 50 – 100

FG: 1.008 – 1.016

SRM: 5 – 8

ABV: 6.2 – 9.5%

Commercial Examples: Brewery Vivant Triomphe, Green Flash Le Freak, Houblon Chouffe, Urthel Hop It

Tags: high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

Specialty IPA: Black IPA

Overall Impression: A beer with the dryness, hop-forward balance, and flavor characteristics of an American IPA, but darker in color. Darker malts add a gentle and supportive flavor, not a strongly roasted or burnt character.

Aroma: Moderate to high hop aroma, often with a stone fruit, tropical, citrusy, resinous, pine, berry, or melon character. Very low to moderate malt, possibly with light chocolate, coffee, or toast notes, as well as a background caramel sweetness. Clean fermentation profile, but light esters acceptable.

Appearance: Dark brown to black color. Clear, if not opaque. Light haze allowable, but should not be murky. Light tan to tan head, moderate size, persistent.

Flavor: Medium-low to high hop flavor, same descriptors as aroma. Low to medium malt flavor, with restrained chocolate or coffee notes, but not burnt or ashy. The roasted notes should not clash with the hops. Light caramel or toffee optional. Medium-high to very high bitterness. Dry to slightly off-dry finish, with a bitter but not harsh aftertaste, often with a light roast flavor that can contribute to the dry impression. Low to moderate esters optional. Background alcohol flavor optional.

Mouthfeel: Smooth. Medium-light to medium body. Medium carbonation. Light creaminess optional. Light warmth optional.

Comments: Most examples are standard strength. Strong examples can sometimes seem like big, hoppy porters if made too extreme, which hurts their drinkability.

History: An American IPA variant first commercially produced by Greg Noonan as Blackwatch IPA around 1990. Popularized in the Pacific Northwest and Southern California of the US starting in the early-mid 2000s, and was a popular fad in the early 2010s before fading into obscurity in the US.

Characteristic Ingredients: Debittered roast malts. Any American or New World hop character is acceptable; new hop varieties continue to be released and should not constrain this style to the example hop characteristics listed.

Style Comparison: Balance and overall impression of an American or Double IPA with restrained roast similar to the type found in Schwarzbier. Not as rich and roasty as American Stout and Porter, and with less body and increased smoothness and drinkability.

Vital Statistics: OG: 1.050 – 1.085
IBUs: 50 – 90 FG: 1.010 – 1.018
SRM: 25 – 40 ABV: 5.5 – 9.0%

Commercial Examples: 21st Amendment Back in Black, Duck-Rabbit Hoppy Bunny ABA, Stone Sublimely Self-Righteous Black IPA

Tags: high-strength, dark-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

Specialty IPA: Brown IPA

Overall Impression: Hoppy, bitter, and moderately strong like an American IPA, but with dark caramel, chocolate, toffee, or dark fruit character as in an American Brown Ale. Retaining the dryish finish and lean body that makes IPAs so drinkable, a Brown IPA is a little more flavorful and malty than an American IPA without being sweet or heavy.

Aroma: Moderate to moderately-high hop aroma, often with a stone fruit, tropical fruit, citrus, resin, pine, berry, or melon character. Medium-low to medium malty-sweet aroma mixes in well with the hop selection, and often features milk chocolate, cocoa, toffee, nuts, biscuits, dark caramel, toasted bread, or dark fruit character. Clean fermentation profile. Light esters optional. Light alcohol aroma optional.

Appearance: Color ranging from reddish-brown to dark brown but not black. Clear, if not opaque. Light haze optional. Medium-sized, cream-colored to tan head with good persistence.

Flavor: Medium to high hop flavor, same descriptors as aroma. Medium-low to medium clean, supportive malty flavor with same descriptors as aroma. The malt and hop choices should not produce flavor clashes. Medium-high to high bitterness, no harshness. Dry to medium finish, with a bitter, hoppy, and malty aftertaste. Low esters optional. Very low alcohol flavor optional. No highly roasted or burnt malt flavors. The malt should nearly balance the hop bitterness and flavor.

Mouthfeel: Medium-light to medium body, with a smooth texture. Medium to medium-high carbonation. No harshness. Light warmth optional.

Comments: Separated from American Brown Ale to better differentiate stronger, highly hopped examples from more balanced, standard-strength beers.

History: See American Brown Ale.

Characteristic Ingredients: Similar to an American IPA, but with medium or dark crystal malts, lightly roasted chocolate-type malts, or other intermediate color character malts. May use sugar adjuncts, including brown sugar. Any American or New World hop character is acceptable, but the hops and character malts should not clash.

Style Comparison: A stronger and more bitter version of an American Brown Ale, with the dry balance of an American IPA. Has less of a roasted flavor than Black IPA, but more chocolate flavors than a Red IPA.

Vital Statistics: OG: 1.056 – 1.070
IBUs: 40 – 70 FG: 1.008 – 1.016
SRM: 18 – 35 ABV: 5.5 – 7.5%

Commercial Examples: Dogfish Head Indian Brown Ale, Harpoon Brown IPA, Russian River Janet's Brown Ale

Tags: high-strength, dark-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

Specialty IPA: Red IPA

Overall Impression: Hoppy, bitter, and moderately strong like an American IPA, but with some caramel, toffee, or fruit character as in an American Amber Ale. Retaining the dryish finish and lean body that makes IPAs so drinkable, a Red IPA is a little more flavorful and malty than an American IPA without being sweet or heavy.

Aroma: Moderate to strong hop aroma, often with a stone fruit, tropical fruit, citrus, resin, pine, berry, or melon character. Medium-low to medium malty-sweet aroma mixes in well with the hop selection, and often features medium to dark caramel, toffee, toasted bread, or dark fruit character. Clean fermentation profile. Light esters optional. Light alcohol aroma optional.

Appearance: Color ranging from light reddish-amber to dark reddish-copper. Clear. Light haze optional. Medium-sized, off-white to cream-colored head with good persistence.

Flavor: Medium to very high hop flavor, same descriptors as aroma. Medium-low to medium clean, supportive malty flavor with same descriptors as aroma. The malt and hop choices should not produce flavor clashes. Medium-high to very high bitterness, no harshness. Dry to medium finish, with a bitter, hoppy, and malty aftertaste. Low esters optional. Very low alcohol flavor optional. The malt should not overshadow the hop flavor and bitterness in the balance.

Mouthfeel: Medium-light to medium body, with a smooth texture. Medium to medium-high carbonation. No harshness. Light warmth optional.

Comments: Separated from American Amber Ale to better differentiate stronger, highly hopped examples from more balanced, standard-strength beers.

History: A modern American craft beer style, based on American IPA but with the malt flavors of an American Amber Ale. See American Amber Ale.

Characteristic Ingredients: Similar to an American IPA, but with medium or dark crystal malts, possibly some character malts with a light toasty aspect. May use sugar adjuncts. Any American or New World hop character is acceptable, but the hops and character malts should not clash.

Style Comparison: A stronger, hoppier, more bitter version of American Amber Ale. Not as malty and sweet as an American Strong Ale. Drier, less alcohol, and not as malty as American Barleywine. Less chocolate and caramel than Brown IPA, but otherwise similar balance.

Vital Statistics: OG: 1.056 – 1.070
IBUs: 40 – 70 FG: 1.008 – 1.016
SRM: 11 – 17 ABV: 5.5 – 7.5%

Commercial Examples: Avery Hog Heaven, Cigar City Tocobaga Red IPA, Modern Times Blazing World, Tröegs Nugget Nectar

Tags: high-strength, amber-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

Specialty IPA: Rye IPA

Overall Impression: An American IPA with spicy, grainy rye malt. The rye gives a bready and peppery flavor, a creamier body, and a dry, grainy finish.

Aroma: Prominent to intense hop aroma, often with a stone fruit, tropical fruit, citrus, resin, pine, berry, or melon character. Low peppery rye malt aroma, along with a clean, background grainy maltiness. Clean fermentation profile. Light esters optional. Light alcohol aroma optional.

Appearance: Color ranging from medium gold to light reddish-amber. Clear. Light haze optional. Medium-sized, white to off-white head with good persistence.

Flavor: Medium to very high hop flavor, same descriptors as aroma. Low to medium-low clean, supportive malt possibly with light caramel or toast flavors. Low to moderate grainy, peppery, spicy rye flavor that adds to the dry finish. Medium-high to very high bitterness, no harshness. Dry, bitter, hoppy aftertaste. Low esters optional. Background alcohol flavor optional.

Mouthfeel: Medium-light to medium body. Smooth texture, may be lightly creamy. Medium to medium-high carbonation. No harshness. Low warmth optional.

Comments: A modern American craft beer variation of American IPA. Rye malt character should be noticeable, otherwise enter in 21A American IPA.

History: A modern craft era variation of American IPA, popular among homebrewers.

Characteristic Ingredients: Like an American IPA, with a generous portion of rye malt. Any American or New World hop is acceptable, but the hops and malt should not clash. No caraway. No oak.

Style Comparison: Drier, slightly spicier, and slightly creamier than an American IPA, with more of a lingering bitterness and spiciness in the finish. Does not have the intense rye malt or Weizen yeast character of a Roggenbier.

Vital Statistics:
OG: 1.056 – 1.075
IBUs: 50 – 75
SRM: 6 – 14
FG: 1.008 – 1.014
ABV: 5.5 – 8.0%

Commercial Examples: Founders Red's Rye IPA, Sierra Nevada Ruthless Rye

Tags: high-strength, amber-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

Specialty IPA: White IPA

Overall Impression: A fruity, spicy, refreshing version of an American IPA, but with a lighter color, less body, and featuring the distinctive yeast or spice additions typical of a Witbier.

Aroma: Moderate esters, often orange, grapefruit, apricot, or sometimes banana. Light spices optional, usually coriander, orange peel, pepper, or clove. Medium-low to medium hop aroma, often stone fruit, citrus, or tropical fruit. Esters and spices may reduce perception of hop aroma. Low neutral, grainy, or bready malt. Light alcohol aroma optional.

Appearance: Pale to deep golden color. Typically hazy. Moderate to large, dense white head that persists.

Flavor: Moderate to high esters, medium-low to medium-high hop flavor, and light spices, all with the same descriptors as aroma. Light malt flavor, perhaps a bit bready. High bitterness. Moderately dry, refreshing finish. Background alcohol flavor optional.

Mouthfeel: Medium-light body. Medium to medium-high carbonation. Light spice astringency optional. Low warmth optional.

Comments: A craft beer interpretation of American IPA crossed with a Witbier. Spice impression may come from Belgian yeast, spice additions, or both.

History: American craft brewers developed the style as a late winter or spring seasonal beer to appeal to Witbier and IPA drinkers alike.

Characteristic Ingredients: Pale and wheat malts, Belgian Witbier yeast, citrusy American type hops. Coriander and orange peel optional.

Style Comparison: Bitter, hoppy, and stronger like an American IPA but fruity, spicy, and light like a Witbier. Typically late hops are not as prominent as in American IPA.

Vital Statistics:
OG: 1.056 – 1.065
IBUs: 40 – 70
SRM: 5 – 6
FG: 1.010 – 1.016
ABV: 5.5 – 7.0%

Commercial Examples: Lagunitas A Little Sumpin' Sumpin' Ale, New Belgium Accumulation

Tags: high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy, spice

Specialty IPA: Brut IPA

Overall Impression: A very pale, hop-forward American IPA variant with a bone-dry finish, very high carbonation, and a restrained bitterness level. Can be suggestive of a sparkling white wine or Champagne. The hop character is modern, and emphasizes flavor and aroma dimensions.

Aroma: Moderately high to intense hop aroma, very bright and hop-forward in the balance. Modern American and New World hop varieties provide a wide range of possible characteristics, such as tropical, stone fruit, citrusy, or white grape, but not grassy, vegetal, or herbal. Malt is subtle, neutral, and in the background, but never caramelly or overly corny-sweet. A light, clean alcohol note is optional. Very clean fermentation character; should not be yeasty.

Appearance: Very pale color, ranging from very pale straw to very light gold. Crystal clear but a touch of haze is acceptable. High to very high carbonation gives a massive, rocky, billowy, white head with tight, persistent bubbles.

Flavor: High to very high hop flavor, same descriptors as aroma. Low to very low neutral malt character, subtle in the balance. No strong malt flavors, no caramel. Perceived bitterness is low to very low due to the bone-dry finish and very high carbonation. Neutral to slightly fruity fermentation profile. No diacetyl. Dry to very dry finish with a fresh, hoppy aftertaste, and a clean bitterness.

Mouthfeel: Light to very light body with a spritzy carbonation (high to very high), reminiscent of a sparkling white wine. No bitter, harsh, hop-derived astringency. Alcohol warmth may be present but should never be hot.

Comments: Original concept was a sparkling wine-like IPA, although the hop character now varies more widely. Very low final gravity and high carbonation makes balance critical, often requiring a surprisingly low measured bitterness. 'Brut' is a wine term indicating dryness. Used incorrectly, added enzymes can cause diacetyl, which is always a flaw.

History: A modern craft beer style originating in 2017 at the (now closed) Social Kitchen & Brewery in San Francisco as a west coast reaction to the rising trend of east coast hazy and juicy IPAs as well as thick and sweet so-called milkshake IPAs.

The style is still evolving and changing (and perhaps dying, as the beer was quite faddish in 2018-2019 in the US). Most versions seem to be morphing into low-calorie IPAs.

Characteristic Ingredients: Pilsner or very pale base malts with up to 40% adjuncts. No crystal malt or lactose. Enzymes, such as amyloglucosidase. Highly aromatic, oil-heavy, modern American or New World hops used in a variety of late-hopping or post-boil procedures to emphasize hop aroma and flavor and to minimize bitterness. Neutral yeast.

Style Comparison: Less malt flavor, bitterness, and color than an American IPA, and much drier and more highly carbonated. Dry-hopped like an American IPA. Similar aroma and flavor as a Hazy IPA but without sweetness and with much less haze. Very pale, highly carbonated, and dry like a Belgian Golden Strong Ale but not as strong and without Belgian yeast character.

Vital Statistics: OG: 1.046 – 1.057
IBUs: 20 – 30 FG: 0.990 – 1.004
SRM: 2 – 4 ABV: 6.0 – 7.5%

Commercial Examples: Drake's Brightside Extra Brut IPA, Fair State Brewing Co-Op The Brut Squad, Ommegang Brut IPA

Tags: high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, specialty-family, bitter, hoppy

21C. Hazy IPA

Overall Impression: An American IPA with intense fruit flavors and aromas, a soft body, smooth mouthfeel, and often opaque with substantial haze. Less perceived bitterness than traditional IPAs but always massively hop-forward.

Aroma: Intense hop aroma, with stone fruit, tropical fruit, citrus, or other fruity qualities; not grassy or herbal. Clean, neutral, grainy, or lightly bready malt in the background; no caramel or toast. Absence of any malt character is a fault. Neutral to fruity fermentation character. Esters from yeast and hops should not clash. A creamy, buttery, or acidic aroma is inappropriate. Light alcohol aroma optional.

Appearance: Color ranging from straw to very light amber, sometimes with an orange hue. Hazy, often opaque, clarity; should not be cloudy or murky. The opacity can add a 'shine' to the beer and make the color seem darker. Any visible floating hop matter, yeast clumps, or other particulates is a fault. Medium to rocky, meringue-like white head with high to very high retention.

Flavor: High to very high fruity hop flavor, same descriptors as aroma. Low to medium malt flavor, same descriptors as aroma. Low to medium-high perceived bitterness, often masked by the fuller body and soft, off-dry to medium finish. The hop character in the aftertaste should not be sharp or harsh. Neutral to fruity fermentation profile, supportive of the

hops. Should not be sweet, although high ester levels and lower bitterness may sometimes give that impression. Background alcohol flavor optional.

Mouthfeel: Medium to medium-full body. Medium carbonation. Smooth. No harshness. Light warmth optional. The beer should not have a creamy or viscous mouthfeel, an acidic twang, or a raw starch texture.

Comments: Also known as New England IPA or NEIPA. An emphasis on late hopping, especially dry-hopping, with hops with tropical fruit qualities lends the 'juicy' character for which this style is known.

Heavy examples suggestive of milkshakes, creamsicles, or fruit smoothies are outside this style; IPAs should always be drinkable. Haziness comes from dry-hopping, not suspended yeast, starch haze, or other techniques; a hazy shine is desirable, not a cloudy, murky mess.

History: A modern craft beer style originating in the New England region of the United States as an American IPA variant. Alchemist Heady Topper is believed to be the original inspiration as the style grew in popularity during the 2010s. The style continues to evolve, including a trend towards lower bitterness and using the style as the base for other additions.

Characteristic Ingredients: Grist like an American IPA, but with more flaked grains and less caramel or specialty malts. American or New World hops with fruity characteristics. Neutral to estery yeast. Balanced to chloride-rich water. Heavily dry-hopped, partly during active fermentation, using a variety of hopping doses and temperatures to emphasize depth of hop aroma and flavor over bitterness. Biotransformation of hop oils during fermentation adds to the depth and fruit complexity.

Style Comparison: Has a fuller, softer mouthfeel, a more fruit-forward late hop expression, a more restrained perceived bitterness balance, and a hazier appearance than American IPA. Many modern American IPAs are fruity and somewhat hazy; examples with a dry, crisp finish, at most medium body, and high perceived bitterness should be entered as 21A American IPA. Noticeable additions of fruit, lactose, vanilla, etc. to increase the fruity, smooth character should be entered in a specialty category defined by the additives (e.g., 29A Fruit Beer, 29C Specialty Fruit Beer, 30D Specialty Spice Beer).

Vital Statistics: OG: 1.060 – 1.085
IBUs: 25 – 60 FG: 1.010 – 1.015
SRM: 3 – 7 ABV: 6.0 – 9.0%

Commercial Examples: Belching Beaver Hazers Gonna Haze, Hill Farmstead Susan, Other Half Green Diamonds Double IPA, Pinthouse Electric Jellyfish, Tree House Julius, Trillium Congress Street, WeldWerks Juicy Bits

Tags: high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, bitter, hoppy

22. STRONG AMERICAN ALE

This category includes modern American strong ales with a varying balance of malt and hops. The category is defined mostly by higher alcohol strength and a lack of roast.

22A. Double IPA

Overall Impression: An intensely hoppy, fairly strong, bitter pale ale without the big, rich, complex maltiness, residual sweetness, and body of an American Barleywine. Strongly hopped, but clean, dry, and lacking harshness. Despite showing its strength, drinkability is an important consideration.

Aroma: A prominent to intense hop aroma typically featuring modern American or New World hop characteristics such as citrus, floral, pine, resin, spice, tropical fruit, stone fruit, berry, or melon. A supportive, clean, neutral to grainy maltiness may be found in the background. Neutral to lightly fruity fermentation profile. Alcohol may be noted, but should not be solventy.

Appearance: Gold to light orange-copper color, but most modern versions are fairly pale. Good clarity, although a little haze is acceptable. Moderate-sized, persistent, white to off-white head.

Flavor: Strong and complex hop flavor (same descriptors as aroma). Moderately high to very high bitterness, but should not be harsh. Low to medium supportive, clean, soft, unobtrusive malt character; may have light caramel or toast flavors. Dry to medium-dry finish, not sweet or heavy, with a lingering hoppy, bitter aftertaste. Low to moderate fruitiness optional. A light, clean, smooth alcohol flavor is allowable.

Mouthfeel: Medium-light to medium body, with a smooth texture. Medium to medium-high carbonation. No harsh hop-derived astringency. Restrained, smooth alcohol warmth acceptable.

Comments: Rarely called Imperial IPA. Many modern versions have multiple dry-hop additions.

History: An American craft beer innovation first developed in the mid-late 1990s as more intense version of American IPA. Became more mainstream and popular throughout the 2000s, and inspired additional IPA creativity. Russian River Pliny the Elder, first brewed in 2000, helped popularize the style.

Characteristic Ingredients: Neutral base malt. Sugar adjuncts common. Crystal malts rare. American or New World hops. Neutral or lightly fruity yeast. No oak.

Style Comparison: Bigger than English and American IPAs in alcohol strength, bitterness, and hoppiness. Less malty-rich, less body, drier, and with a greater overall hop balance than American Barleywine.

Vital Statistics:
IBUs: 60 – 100
SRM: 6 – 14

OG: 1.065 – 1.085
FG: 1.008 – 1.018
ABV: 7.5 – 10.0%

Commercial Examples: Columbus Brewing Bohdi, Fat Head's Hop Juju, Port Brewing Hop-15, Russian River Pliny the Elder, Stone Ruination Double IPA 2.0, Wicked Weed Freak of Nature

Tags: very-high-strength, pale-color, top-fermented, north-america, craft-style, ipa-family, bitter, hoppy

22B. American Strong Ale

A grouping of beers with similar balance and profile rather than a distinct style. A category for a variety of stronger, bitter-and-malty beers that aren't quite Barleywines.

Overall Impression: A malty, bitter, and strong American Ale fitting in the space between American Barleywine, Double IPA, and Red IPA. The malty and hoppy flavors can be quite strong, but are generally in balance.

Aroma: Medium to high hop aroma typically featuring modern American or New World hop characteristics such as citrus, floral, pine, resinous, spicy, tropical fruit, stone fruit, berry, or melon. Moderate to bold maltiness supporting the hop profile, with medium to dark caramel common, toasty or bready possible, and background notes of light roast or chocolate allowable. Neutral to moderately fruity fermentation profile. Alcohol may be noted, but should not be solventy.

Appearance: Medium amber to deep copper or light brown. Moderate-low to medium-sized off-white to light tan head; may have low head retention. Good clarity. Legs possible.

Flavor: Medium to high malt, with a caramel, toffee, or dark fruit quality. Malt complexity can include additional toasty, bready, or rich flavors in support. Light chocolate or roast allowable, but should not be burnt or sharp. Medium-high to high bitterness. Moderate to high hop flavor, same descriptors as aroma. Low to moderate esters. May have a noticeable alcohol flavor, but should not be sharp. Medium to high malty sweetness on the palate, finishing somewhat dry to somewhat sweet. Should not be syrupy, sweet, or cloying. Bitter to bittersweet aftertaste, with hops, malt, and alcohol noticeable.

Mouthfeel: Medium to full body. An alcohol warmth may be present, but should not be excessively hot. Light hop astringency allowable. Medium-low to medium carbonation.

Comments: A fairly broad style describing beers labeled in various ways, including modern Double Red Ales and other strong, malty-but-hoppy beers that aren't quite in the Barleywine class. Diverse enough to include what may be viewed as a strong American Amber Ale with room for stronger versions of other American Ale styles.

History: While modern craft versions were developed as "imperial" strength versions of American amber or red ales, the style has much in common with historic American Stock Ales. Strong, malty beers were highly hopped to keep as provision beers prior to Prohibition. There is no continuous legacy of brewing stock ales in this manner, but the resemblance is considerable (albeit without the age character).

Characteristic Ingredients: Pale base malt. Medium to dark crystal malts common. American or New World hops. Neutral or lightly fruity yeast.

Style Comparison: Generally not as strong and as rich as an American Barleywine. More malt balanced than an American or Double IPA. More American hop intensity than a British Strong Ale. Maltier and fuller-bodied than a Red IPA.

Vital Statistics:
IBUs: 50 – 100
SRM: 7 – 18

OG: 1.062 – 1.090
FG: 1.014 – 1.024
ABV: 6.3 – 10.0%

Commercial Examples: Arrogant Bastard Ale, Fat Head's Bone Head, Great Lakes Nosferatu, Oskar Blues G'Knight, Port Brewing Shark Attack Double Red Ale

Tags: high-strength, amber-color, top-fermented, north-america, craft-style, strong-ale-family, bitter, hoppy

22C. American Barleywine

Overall Impression: A very strong, malty, hoppy, bitter American ale with a rich palate, full mouthfeel, and warming aftertaste, suitable for contemplative sipping.

Aroma: Strong malt and hop aroma dominates. Hops are moderate to assertive, showing a range of American, New World, or English characteristics. Citrusy, fruity, or resinous are classic attributes, but others are possible, including those from modern hops. Strong grainy, breaded, toasty, light caramel, or neutral malt richness, but typically not with darker caramel, roast, or deep fruit aspects. Low to moderately strong esters and alcohol, lower in the balance than the malt and hops. Intensities fade with age.

Appearance: Color ranges from amber to medium copper, rarely up to light brown. Ruby highlights common. Moderately-low to large off-white to light tan head; may have low head retention. Good to brilliant clarity but may have some chill haze. The color may appear to have great depth, as if viewed through a thick glass lens. Legs possible.

Flavor: Similar malt and hop flavors as the aroma (same descriptors apply). Moderately strong to aggressive bitterness, tempered by a rich, malty palate. Moderate to high hop flavor. Low to moderate esters. Noticeable alcohol, but not solventy. Moderately low to moderately high malty sweetness on the palate, with a somewhat malty to dry but full finish. Age will often dry out the beer, and smooth out the flavors. The balance is malty, but always bitter.

Mouthfeel: Full-bodied and chewy, with a velvety, luscious texture, declining with age. A smooth alcohol warmth should be noticeable, but shouldn't burn. Carbonation may be low to moderate, depending on age and conditioning.

Comments: Sometimes labeled as "Barley Wine" or "Barleywine-style ale". Recently many US breweries seem to have discontinued their Barleywines, made them barrel-aged, or rebranded them as some form of IPA.

History: Traditionally the strongest ale offered by a brewery, often associated with the winter season and vintage-dated. As with many American craft beer styles, an adaptation of an English style using American ingredients and balance. One of the first American craft beer versions was Anchor Old Foghorn, first brewed in 1975. Sierra Nevada Bigfoot, first brewed in 1983, set the standard for the hop-forward style of today. The story goes that when Sierra Nevada first sent Bigfoot out for lab analysis, the lab called and said, "your Barleywine is too bitter" – to which Sierra Nevada replied, "thank you."

Characteristic Ingredients: Pale malt with some specialty malts. Dark malts used with great restraint. Many varieties of hops can be used, but typically includes American hops. American or English ale yeast.

Style Comparison: Greater emphasis on hop bitterness, flavor, and aroma than English Barley Wine, often featuring American hop varieties. Typically paler than the darker English Barley Wines and lacking their deeper malt flavors, but darker than the golden English Barley Wines. Differs from a Double IPA in that the hops are not extreme, the malt is more forward, and the body is fuller and often richer. American Barleywine typically has more residual sweetness than Double IPA, which affects the overall drinkability (sipping vs. drinking).

Vital Statistics: OG: 1.080 – 1.120
IBUs: 50 – 100 FG: 1.016 – 1.030
SRM: 9 – 18 ABV: 8.0 – 12.0%

Commercial Examples: Anchor Old Foghorn, Bell's Third Coast Old Ale, East End Gratitude, Hair of the Dog Doggie Claws, Sierra Nevada Bigfoot

Tags: very-high-strength, amber-color, top-fermented, north-america, craft-style, strong-ale-family, bitter, hoppy

22D. Wheatwine

Overall Impression: A richly textured, high alcohol sipping beer with a significant grainy, breaded, and a sleek body. The emphasis is first on the breaded, wheaty flavors with malt, hops, fruity yeast, and alcohol complexity.

Aroma: Hop aroma is mild and can represent just about any hop variety. Moderate to moderately-strong breaded, wheaty malt character, often with additional malt complexity such as honey and caramel. A light, clean, alcohol aroma may be noted. Low to medium fruity notes may be apparent. Very low diacetyl optional. Banana-and-clove Weizen yeast character is inappropriate.

Appearance: Color ranging from gold to deep amber, often with garnet or ruby highlights. Low to medium off-white head. The head may have creamy texture, and good retention. Chill haze is allowable, but usually clears up as the beer gets warmer. High alcohol and viscosity may be visible as legs.

Flavor: Moderate to moderately-high breaded wheat malt flavor, dominant in the flavor balance over any hop character. Low to moderate toasty, caramel, biscuity, or honey malt notes can add a welcome complexity, but are not required. Low to medium hop flavor, reflecting any variety. Moderate to moderately-high fruitiness, often with a dried-fruit character. Low to moderate bitterness, creating a malty to even balance. Should not be syrupy or under-attenuated.

Mouthfeel: Medium-full to full body. Chewy, often with a luscious, velvety texture. Low to moderate carbonation. Light to moderate smooth alcohol warmth optional.

Comments: Much of the color arises from a lengthy boil. Some commercial examples may be stronger than the Vital Statistics.

History: An American craft beer style that was first brewed at the Rubicon Brewing Company in 1988. Usually a winter seasonal, vintage, or one-off release.

Characteristic Ingredients: Typically brewed with a combination of American two-row and American wheat. Style commonly uses 50% or more wheat malt. Restrained use of dark malts. Any variety of hops may be used. May be oak-aged.

Style Comparison: More than simply a wheat-based Barleywine, many versions have very expressive fruity and hoppy notes, while others develop complexity through oak aging. Less emphasis on the hops than American Barleywine. Has roots in American Wheat Beer rather than any German wheat style, so should not have any Weizen yeast character.

Vital Statistics: OG: 1.080 – 1.120
IBUs: 30 – 60 FG: 1.016 – 1.030
SRM: 6 – 14 ABV: 8.0 – 12.0%

Commercial Examples: The Bruery White Oak, Castelain Winter Ale, Perennial Heart of Gold, Two Brothers Bare Tree

Tags: very-high-strength, amber-color, top-fermented, north-america, craft-style, strong-ale-family, wheat-beer-family, balanced, hoppy

23. EUROPEAN SOUR ALE

This category contains the traditional sour beer styles of Europe that are still produced, many (but not all) with a wheat component. Most have low bitterness, with the sourness of the beer providing the balance that hop bitterness would otherwise contribute. Some are sweetened or flavored, whether at the brewery or upon consumption.

23A. Berliner Weisse

Overall Impression: A very pale, refreshing, low-alcohol German wheat beer with a clean lactic sourness and a very high carbonation level. A light bread dough malt flavor supports the sourness, which shouldn't seem artificial. A gentle fruitiness is found in the best examples.

Aroma: A moderate to moderately-high sharply sour character is dominant. Can have up to a moderately fruitiness, often lemon, tart apple, peach, or apricot, and a light floral note. No hop aroma. The wheat may be perceived as raw bread dough in fresher versions; combined with the acidity, may suggest sourdough bread.

Appearance: Straw in color, can be very pale. Clarity ranges from clear to somewhat hazy. Large, dense, white head with poor retention. Highly effervescent.

Flavor: Clean lactic sourness dominates and can be quite strong. A complementary doughy, bready, or grainy wheat flavor is generally noticeable. Hop bitterness is undetectable; sourness provides the balance rather than hops. Never vinegary. Bright yet restrained fruitiness may be detected as apricot-peach, citrus-lemon, or tart apple. Very dry finish. Balance dominated by sourness, but some malt flavor should be present. No hop flavor. No THP.

Mouthfeel: Light body, but never thin. Very high carbonation. No sensation of alcohol. Crisp acidity.

Comments: Any Brett character is restrained, and is typically expressed as fruity and floral notes, not funky. Aged examples can show a cider, honey, hay, or gentle wildflower character, and sometimes increased acidity.

In Germany, it is classified as a *Schankbier* denoting a small beer of starting gravity in the range 7-8 °P. Fruited or Spiced versions should be entered as 29A Fruit Beer, as 30A Spice, Herb, or Vegetable Beer, or as 29B Fruit and Spice Beer.

History: A regional specialty of Berlin. Referred to by Napoleon's troops in 1809 as "the Champagne of the North" due to its lively and elegant character. At one point, it was smoked and there used to be Märzen-strength (14 °P) version. Increasingly rare in Germany, but now produced in several other countries.

Characteristic Ingredients: Pilsner malt. Usually wheat malt, often at least half the grist. A symbiotic co-fermentation with top-fermenting yeast and LAB provides the sharp sourness, which may be enhanced by blending of beers of different ages during fermentation and by cool aging. Decoction mashing with mash hopping is traditional. German brewing scientists believe that Brett is essential to get the correct, fruity-floral flavor profile.

Style Comparison: Compared to Lambic, has a clean lactic sourness with restrained to below sensory threshold Brett. Also lower in alcohol content. Compared to Straight Sour Beer and Catharina Sour, is lower gravity and may contain Brett.

Vital Statistics:

OG:	1.028 – 1.032
IBUs: 3 – 8	FG: 1.003 – 1.006
SRM: 2 – 3	ABV: 2.8 – 3.8%

Commercial Examples: Bayerischer Bahnhof Berliner Style Weisse, Berliner Berg Berliner Weisse, Brauerei Meierei Weiße,

Lenke Berlin Budike Weisse, Schell's Brewing Company Schelltheiss, Urban Chestnut Ku'damm

Tags: session-strength, pale-color, top-fermented, central-europe, traditional-style, wheat-beer-family, sour

23B. Flanders Red Ale

Overall Impression: A sour and fruity oak-aged reddish-brown Belgian-style ale with supportive toasty malt flavors and fruit complexity. The dry, tannic finish supports the suggestion of a vintage red wine.

Aroma: Complex fruity-sour profile with supporting malt. Fruitiness is high, and reminiscent of black cherries, oranges, plums, red currants, or fruit leather. Low to medium-low vanilla, chocolate, or peppery phenol can be present for complexity. The sour aroma ranges from moderate to high. A dominant vinegary character is inappropriate, although low to moderate levels of acetic acid are acceptable if balanced with the malt. No hop aroma.

Appearance: Deep red, burgundy to reddish-brown in color. Good clarity. White to very pale tan head. Average to good head retention.

Flavor: Moderate to moderately-high malty flavors often have a soft toasty-rich quality. Intense fruit flavors, same descriptors as aroma. Complex, moderate to high sourness, accentuated by the esters; should not be a simple lactic sourness. A dominant vinegary character is inappropriate, although low to moderate acetic acid is acceptable if balanced with the malt. Generally as the sour character increases, the malt character fades to more of a background flavor (and vice versa). Low to medium-low vanilla, chocolate, or peppery phenols optional. No hop flavor. Restrained bitterness; balanced to the malt side. Acids and tannins can enhance the perception of bitterness, and provide balance and structure. Some versions are sweetened, or blended to be sweet; allow for a wide range of sweetness levels, which can soften the acidic bite and acetic perception.

Mouthfeel: Medium body, often enhanced by tannins. Low to medium carbonation. Low to medium astringency, often with a prickly acidity. Deceivingly light and crisp on the palate although a somewhat sweet finish is not uncommon.

Comments: The "wine-like" observation should not be taken too literally; it may suggest a high-acid French Burgundy to some, but it is clearly not identical. Produced by long aging (up to two years) in large wooden vats (foeders), blending of young and well-aged beer, and variable amounts of sweetening of the final product. A wide range of products are possible depending on the actual blend and whether any sweetening takes place. Acetic flavors may be noted, but not all acidity in this beer is from acetic acid; vinegar is over six times greater in total acidity than this style. Fruited versions should be entered as a 29A Fruit Beer.

History: An indigenous beer of West Flanders, typified by the products of the Rodenbach brewery, established in 1821. Aging in wooden vats and blending of old and young beers borrowed from the English tradition. Belgian brewers consider Flanders Red and Oud Bruin to be of the same style family, but the distinction was first made when Michael Jackson first defined beer styles, since the flavor profiles are distinctly different.

Many modern examples are influenced by the popularity of Rodenbach Grand Cru.

Characteristic Ingredients: Vienna or Munich malts, a variety of caramel malts, maize. Low alpha acid continental hops. Sacch, Lacto, and Brett. Aged in oak. Sometimes blended and sweetened (natural or artificial).

Style Comparison: Less malty-rich than an Oud Bruin, often with more of a fruity-tart and acetic profile.

Vital Statistics: OG: 1.048 – 1.057
IBUs: 10 – 25 FG: 1.002 – 1.012
SRM: 10 – 17 ABV: 4.6 – 6.5%

Commercial Examples: Cuvée des Jacobins, Duchesse de Bourgogne, New Belgium La Folie, Rodenbach Classic, Rodenbach Grand Cru, Vichtenaar Flemish Ale

Tags: standard-strength, amber-color, top-fermented, western-europe, traditional-style, balanced, sour, wood

23C. Oud Bruin

Overall Impression: A malty, fruity, aged, somewhat sour Belgian-style brown ale with a caramel-chocolate malt flavor, and often substantial alcohol.

Aroma: Richly malty with fruity esters and an aged sourness. Medium to medium-high esters commonly reminiscent of raisins, plums, figs, dates, oranges, black cherries, or prunes. Medium-low to medium-high malt with caramel, toffee, treacle, or chocolate character. Low spicy-peppery phenols optional. A low sour aroma may be present, and can modestly increase with age but should not grow to a strongly acetic, vinegary character. Hop aroma absent. Aged examples can show a lightly nutty, sherry-like oxidation character.

Appearance: Dark reddish-brown to brown in color. Good clarity. Average to good head retention. Ivory to light tan head color.

Flavor: Malty with fruity complexity and typically some dark caramel or burnt sugar flavor. Medium-low to medium-high malt, same descriptors as aroma. Medium to medium-high fruitiness, same descriptors as aroma. Low spicy-peppery phenols optional. A slight sourness often becomes more pronounced in well-aged examples, along with some sherry-like character, producing a “sweet-and-sour” profile and aftertaste. The sourness should not grow to a strongly acetic, vinegary character. Hop flavor absent. Restrained hop bitterness. Balance is malty, but with fruitiness and sourness present. Blending and sweetening may produce a range of finishes, and balances.

Mouthfeel: Medium to medium-full body. Low to moderate carbonation. No astringency. Stronger versions can be noticeably warming.

Comments: Long aging and blending of young and aged beer may occur, adding smoothness and complexity and balancing any harsh, sour character. Traditionally, this style was designed to lay down so examples with a moderate aged character are considered superior to younger examples. Fruited versions should be entered as a 29A Fruit Beer.

History: An indigenous beer of East Flanders, typified by the products of the Liefman brewery with roots back to the 1600s. Belgian brewers consider Flanders Red and Oud Bruin to be of the same style family, but the distinction was first made when Michael Jackson first defined beer styles, since the flavor profiles are distinctly different. Many modern examples are influenced by the popularity of Liefmans Goudenband. Unrelated to the dark, sweet Dutch lager of the same name.

Characteristic Ingredients: Pils malt, dark crystal malts, maize, small amounts of color malt. Low alpha acid continental hops. Sacch and Lacto. Aged. Water with carbonates and magnesium typical of its home region.

Style Comparison: A deeper malt character with more caramel, toffee, and chocolate flavors and darker color distinguishes these beers from Flanders Red Ale. The Oud Bruin is less acetic and maltier than a Flanders Red, and the fruity flavors are more malt-oriented. In modern times, Oud Bruin also tends to be higher in alcohol than is typically seen in Flanders Red Ales. Differs from Lambic in that they are not spontaneously fermented, and don't contain wheat.

Vital Statistics: OG: 1.040 – 1.074
IBUs: 20 – 25 FG: 1.008 – 1.012
SRM: 17 – 22 ABV: 4.0 – 8.0%

Commercial Examples: Ichtegem Oud Bruin, Liefmans Goudenband, Liefmans Oud Bruin, Petrus Roodbruin, pFriem Oud Bruin, VanderGhinste Roodbruin

Tags: standard-strength, dark-color, top-fermented, western-europe, traditional-style, malty, sour

23D. Lambic

Overall Impression: A fairly sour, often moderately funky, wild Belgian wheat beer with sourness taking the place of hop bitterness in the balance. Traditionally served uncarbonated as a café drink.

Aroma: Young versions can be quite sour and fruity, but can develop barnyard, earthy, goaty, hay, horsey, or horse blanket funkiness with age. The fruit character can take on a light citrus fruit, citrus rind, pome fruit, or rhubarb quality, getting more complex with age. Malt can have a light bready, grainy, honey, or wheat-like quality, if noticeable. Should not have enteric, smoky, cigar-like, or cheesy faults. No hops.

Appearance: Pale yellow to deep golden in color; age tends to darken the beer. Clarity is hazy to good. Younger versions are often cloudy, while older ones are generally clear. White colored head generally has poor retention.

Flavor: Young versions often have a strong lactic sourness with fruity flavors (same descriptors as aroma), while aged versions are more balanced and complex. Funky notes can develop over time, same descriptors as aroma. Low bready, grainy malt. Bitterness generally below sensory threshold; sourness provides the balance. No hop flavor. Dry finish, increasing with age. Should not have enteric, smoky, cigar-like, or cheesy faults.

Mouthfeel: Light to medium-light body; should not be watery. Has a medium to high tart, puckering quality without being sharply astringent. Traditional versions are virtually to completely uncarbonated, but bottled examples can pick up moderate carbonation with age.

Comments: A single-batch, unblended beer, reflecting the house character of the brewery. Generally served young (6 months) from the cask. Younger versions tend to be one-dimensionally sour since a complex Brett character takes a year or more to develop. A noticeable vinegary or cidery character is considered a fault by Belgian brewers. Typically bottled only when completely fermented. Lambic sweetened with raw sugar at service time is known as *Faro*.

History: Spontaneously-fermented ‘wild’ ales from the area in and around Brussels (also known as the Senne Valley and the Pajottenland) stem from a farmhouse brewing tradition several centuries old. The number of producers is constantly dwindling.

Characteristic Ingredients: Pilsner malt, unmalted wheat. Aged hops (3+ years) used more as a preservative than for bitterness. Spontaneously fermented with naturally occurring yeast and bacteria in well-used, neutral oak barrels.

Style Comparison: Often has a simpler sourness and less complexity than a Gueuze, but more variability from batch to batch. Traditionally served uncarbonated from pitchers, while Gueuze is bottled and very highly carbonated.

Vital Statistics: OG: 1.040 – 1.054
IBUs: 0 – 10 FG: 1.001 – 1.010
SRM: 3 – 6 ABV: 5.0 – 6.5%

Commercial Examples: Cantillon Grand Cru Bruocsella. In the Brussels area, many specialty cafés have draught lambic from Boon, De Cam, Cantillon, Drie Fonteinen, Lindemans, Timmermans, Girardin and others.

Tags: standard-strength, pale-color, wild-fermented, western-europe, traditional-style, wheat-beer-family, sour

23E. Gueuze

Overall Impression: A very refreshing, highly carbonated, pleasantly sour but balanced wild Belgian wheat beer. The wild beer character can be complex and varied, combining sour, funky, and fruity flavors.

Aroma: Moderately sour with complex but balanced funkiness accented by fruity notes. The funkiness can be moderate to strong, and can be described as barnyard, leather, earthy, goaty, hay, horsey, or horse blanket. Fruitiness is light to moderate, with a citrus fruit, citrus rind, pome fruit, or rhubarb quality. Malt is supportive, and can be lightly bready, grainy, honey, or wheat-like, if noticeable. Should not have enteric, smoky, cigar-like, or cheesy faults. No hops. Light oak acceptable. Complexity of aroma is valued more than intensity, but a balanced sour presentation is desirable.

Appearance: Golden color, with excellent clarity and a thick, rocky, mousse-like, white head that seems to last forever. Effervescent.

Flavor: Sour and funky on the palate, with a similar character as the aroma (same descriptors and intensities apply for funk and fruit). Low bready, grainy malt. Bitterness low to none; sourness provides most of the balance. No hop flavor. Crisp, dry finish, with a tart and funky aftertaste. Light oak, vanilla, and honey are acceptable. Should not have enteric, smoky, cigar-like, or cheesy faults. The beer should not be one dimensionally sour; a balanced, moderately sour presentation is classic, with the funky and fruity notes providing complexity. May be aged.

Mouthfeel: Light to medium-light body; should not be watery. Has a low to high tart, puckering quality without being sharply astringent. Some versions have a very light warming character. Highly carbonated.

Comments: Blending young and aged lambic creates a more complex product, and often reflects the personal taste of the blender. A noticeable vinegary or cidery character is considered a fault by Belgian brewers. A good Gueuze is not the most pungent, but possesses a full and tantalizing bouquet, a sharp aroma, and a soft, velvety texture. Lambic is served uncarbonated, while Gueuze is served sparkling. Products marked *oude* or *vieille* (“old”) are considered most traditional.

History: Same basic history as Lambic, but involves blending, which may be performed outside the brewery. Some of the best examples are produced by blenders, who ferment, age, blend, and package the final product. Some modern producers are sweetening their products post-fermentation to make them

more palatable to a wider audience. These guidelines describe the traditional dry product.

Characteristic Ingredients: Same as Lambic, except that one-, two-, and three-year old Lambics are blended, then cellared.

Style Comparison: More complex and carbonated than a Lambic. The sourness isn’t necessarily stronger, but it tends to have more of a well-developed wild character.

Vital Statistics: OG: 1.040 – 1.054
IBUs: 0 – 10 FG: 1.000 – 1.006
SRM: 5 – 6 ABV: 5.0 – 8.0%

Commercial Examples: 3 Fonteinen Oud Gueuze, Cantillon Classic Gueuze 100% Lambic, Girardin Gueuze 1882 (Black label), Hanssens Oude Gueuze, Lindemans Gueuze Cuvée René, Oude Gueuze Boon

Tags: high-strength, pale-color, wild-fermented, western-europe, traditional-style, wheat-beer-family, aged, sour

23F. Fruit Lambic

Overall Impression: A complex, refreshing, pleasantly sour Belgian wheat beer blending a complementary fermented fruit character with a sour, funky Gueuze.

Aroma: The specified fruit should be the dominant aroma, blending well with similar aromatics as Gueuze (same description applies, but with the addition of a fermented fruit character).

Appearance: Like Gueuze, but modified by the color of the fruit used, fading in intensity with age. Clarity is often good, although some fruit will not drop bright. If highly carbonated in the traditional manner, will have a thick rocky, generally long-lasting, mousse-like head, sometimes with a hue reflecting the added fruit.

Flavor: Combines the flavor profile of a Gueuze (same description applies) with noticeable flavor contributions from the added fruit. Traditional versions are dry and tart, with an added fermented fruit flavor. Modern versions may have a variable sweetness, which can offset the acidity. Fruit flavors also fade with age, and lose their vibrancy, so can be low to high in intensity.

Mouthfeel: Light to medium-light body; should not be watery. Has a low to high tart, puckering quality without being sharply astringent. Some versions have a light warming character. Carbonation can vary from sparkling to nearly still.

Comments: Produced like Gueuze, with the fruit commonly added halfway through aging, so the yeast and bacteria can ferment all sugars from the fruit; or less commonly by adding fruit to a Lambic. The variety of fruit can sometimes be hard to identify since fermented and aged fruit is often perceived differently than the more recognizable fresh fruit. Fruit can bring acidity and tannins, in addition to flavor and aroma; understanding the fermented character of added fruit helps with judging the style.

History: Same basic history as Gueuze, including the recent sweetening trend but with fruit in addition to sugar. Fruit was traditionally added by the blender or publican to increase the variety of beers available in local cafés.

Characteristic Ingredients: Same base as Gueuze. Fruit added to barrels during fermentation and blending. Traditional fruit include tart cherries, raspberries; modern fruit include peaches, apricots, grapes, and others. May use natural or artificial sweeteners.

Style Comparison: A Gueuze with fruit, not just a sour Fruit Beer; the wild character must be evident.

Entry Instructions: The *type of fruit* used **must** be specified. The brewer **must** declare a *carbonation* level (low, medium, high) and a *sweetness* level (low/none, medium, high).

Vital Statistics: OG: 1.040 – 1.060
IBUs: 0 – 10 FG: 1.000 – 1.010
SRM: 3 – 7 (varies w/ fruit) ABV: 5.0 – 7.0%

Commercial Examples: 3 Fonteinien Schaerbeekse Kriek, Cantillon Fou' Foune, Cantillon Lou Pepe Framboise, Cantillon Vigneronne, Hanssens Oude Kriek, Oude Kriek Boon

Tags: standard-strength, pale-color, wild-fermented, western-europe, traditional-style, wheat-beer-family, sour, fruit

23G. Gose

Overall Impression: A tart, lightly-bittered historical central European wheat beer with a distinctive but restrained salt and coriander character. Very refreshing, with a dry finish, high carbonation, and bright flavors.

Aroma: Light to moderately fruity aroma of pome fruit. Light sourness, slightly sharp. Noticeable coriander, which can have an aromatic lemony quality, and an intensity up to moderate. Light bready, doughy, yeasty character like uncooked sourdough bread. The acidity and coriander can give a bright, lively impression. The salt may be perceived as a very light, clean sea breeze character or just a general freshness, if noticeable at all.

Appearance: Unfiltered, with a moderate to full haze. Moderate to tall white head with tight bubbles and good retention. Effervescent. Yellow color.

Flavor: Noticeable sourness, medium-low to medium-high. Moderate bready or doughy malt flavor. Light to moderate fruity character of pome fruit, stone fruit, or lemons. Light to moderate salt character, up to the threshold of taste; the salt should be noticeable (particularly in the initial taste) but not taste overtly salty. Very low bitterness. No hop flavor. Dry, fully-attenuated finish, with acidity not hops balancing the malt. Acidity can be more noticeable in the finish, and enhance the refreshing quality of the beer. The acidity should be balanced, not forward (although historical versions could be very sour). No THP.

Mouthfeel: High to very high carbonation. Effervescent. Medium-light to medium-full body. Salt may give a slightly tingly, mouthwatering quality and a rounder, thicker mouthfeel. Yeast and wheat can also add a little body, but shouldn't feel heavy due to the thinning effects of acidity.

Comments: Historical versions may have been more sour than modern examples due to spontaneous fermentation, and may be blended with syrups as is done with Berliner Weisse, or with caraway liqueur. Modern examples are inoculated with Lacto, and are more balanced and generally don't need sweetening. Pronounced *GOH-zeh*.

History: Minor style associated with Leipzig but originating in the Middle Ages in the town of Goslar on the Gose River.

Documented to have been in Leipzig by 1740. Leipzig was said to have 80 Gose houses in 1900. Production declined significantly after WWII, and ceased entirely in 1966. Modern production was revived in the 1980s in Germany, but the beer was not widely available. Became popular outside of Germany recently as a revival style, and is often used as a base style for fruited sour beers and other Specialty-Type beers.

Characteristic Ingredients: Pilsner and wheat malt, restrained use of salt and coriander seed, Lacto. The coriander should have a fresh, citrusy (lemon or bitter orange), bright note, and not be vegetal, celery-like, or ham-like. The salt should have a sea salt or fresh salt character, not a metallic, iodine note.

Style Comparison: Perceived acidity is not as intense as Berliner Weisse or Gueuze. Restrained use of salt, coriander, and Lacto – should not taste overtly salty. Coriander aroma can be similar to a Witbier. Hazy similar to a Weissbier.

Vital Statistics: OG: 1.036 – 1.056
IBUs: 5 – 12 FG: 1.006 – 1.010
SRM: 3 – 4 ABV: 4.2 – 4.8%

Commercial Examples: Anderson Valley Gose, Bayerisch Bahnhof Leipziger Gose, Original Ritterguts Gose, Westbrook Gose

Tags: standard-strength, pale-color, top-fermented, central-europe, historical-style, wheat-beer-family, sour, spice

24. BELGIAN ALE

This category contains the maltier to balanced, more highly flavored Belgian and French ales.

24A. Witbier

Overall Impression: A pale, hazy Belgian wheat beer with spices accentuating the yeast character. A delicate, lightly spiced, moderate-strength ale that is a refreshing summer drink with its high carbonation, dry finish, and light hopping.

Aroma: Moderate bready maltiness, often with light notes of honey or vanilla. Light grainy, spicy wheat aromatics. Moderate perfumy-lemony coriander, often with a complex herbal, spicy, or peppery note in the background. Moderate zesty, citrusy-orangey fruitiness. A low spicy-herbal hop aroma is optional, but typically absent. Spices should blend in with fruity, floral, and sweet aromas and should not be overly strong.

Appearance: Very pale straw to deep yellow in color. The beer will be very cloudy from starch haze or yeast, which gives it a milky, whitish-yellow shine. Dense, white, moussy head. Head retention should be quite good.

Flavor: Pleasant bready, grainy malt flavor, often with a honey or vanilla character. Moderate zesty, orange-citrusy fruitiness. Herbal-spicy flavors, which may include lemony coriander and other spices, are common should be subtle and balanced, not overpowering. A spicy-earthly hop flavor can be low to none, and never overshadows the spices. Hop bitterness is low to medium-low, and supports the refreshing flavors of fruit and spice. Refreshingly crisp with a dry finish, and no bitter or harsh aftertaste.

Mouthfeel: Medium-light to medium body, often having a smoothness and light creaminess. Effervescent character from high carbonation. Refreshing, from carbonation, dryness, and lack of bitterness in finish. No harshness or astringency. Should not be overly dry and thin, nor should it be thick and heavy.

Comments: Historical versions may have had some lactic sourness but this is absent in fresh modern versions. Spicing has some variety, but should not be overdone. Coriander of certain origin or age might give an inappropriate ham or celery character. The beer tends to be perishable, so younger, fresher, properly-handled examples are most desirable. An impression of sweetness is often due to low bitterness, not residual sugar. Most examples seem to be approximately 5% ABV.

History: One of a group of medieval Belgian white beers from the Leuven area, it died out in 1957 and was later revived in 1966 by Pierre Celis at what became Hoegaarden. After Hoegaarden was acquired by Interbrew, the style grew rapidly and inspired many similar products that are traceable to the Celis recreation of the style, not those from past centuries.

Characteristic Ingredients: Unmalted wheat (30-60%), the remainder low color barley malt. Some versions use up to 5-10% raw oats or other unmalted cereal grains. Traditionally uses coriander seed and dried Curaçao orange peel. Other secret spices are rumored to be used in some versions, as are sweet orange peels. Mild fruity-spicy Belgian ale yeast.

Style Comparison: Low bitterness level with a balance similar to a Weissbier, but with spice and citrus character coming from additions more so than the yeast.

Vital Statistics:
IBUs: 8 – 20
SRM: 2 – 4

OG: 1.044 – 1.052
FG: 1.008 – 1.012
ABV: 4.5 – 5.5%

Commercial Examples: Allagash White, Blanche de Bruxelles, Celis White, Hoegaarden White, Ommegang Witte, St. Bernardus Wit

Tags: standard-strength, pale-color, top-fermented, western-europe, traditional-style, wheat-beer-family, spice

24B. Belgian Pale Ale

Overall Impression: A top-fermented, all malt, average strength Belgian ale that is moderately bitter, not dry-hopped, and without strong flavors. The copper-colored beer lacks the aggressive yeast character or sourness of many Belgian beers, but has a well-balanced, malty, fruity, and often bready and toasty profile.

Aroma: Moderate bready malt aroma, which can include toasty, biscuity, or nutty notes, possibly with a touch of light caramel or honey. Moderate to moderately high fruitiness complements the malt, and is suggestive of pear, orange, apple, or lemon, and sometimes of darker stone fruit like plums. Low to moderate spicy, herbal, or floral hop character. Low peppery, spicy phenols optional. The hop character is lower in balance than the malt and fruitiness.

Appearance: Amber to copper in color. Clarity is very good. Creamy, rocky, white head. Well carbonated.

Flavor: Has an initial soft, smooth, moderately malty flavor with a variable profile of toasty, biscuity, nutty, light caramel, or honey notes. Moderate to moderately high fruitiness, with a pear, orange, apple, or lemon character. Medium-low to low spicy, herbal, or floral hop character. Medium-high to medium-low bitterness, enhanced by optional low to very low peppery phenols. Dry to balanced finish, with hops becoming more pronounced in the aftertaste of those with a drier finish. Fairly well balanced overall, with no single component being high in intensity; malt and fruitiness are more forward initially with a supportive bitterness and drying character coming on late.

Mouthfeel: Medium to medium-light body. Smooth palate. Alcohol level is restrained, and any warming character should be low if present. Medium to medium-high carbonation.

Comments: Most commonly found in the Flemish provinces of Antwerp, Brabant, Hainaut, and East Flanders. A *Spéciale Belge Ale* (Belgian Special Ale) in Belgium.

History: Created after a competition in 1904 to create a regional specialty beer to compete with imported British ales and continental lagers. De Koninck of Antwerp is the best-known modern example, making the beer since 1913.

Characteristic Ingredients: Variable grist with pale, character, and caramel malts. No adjuncts. English or continental hops. Fruity yeast with low phenols.

Style Comparison: Fairly similar to pale ales from England (11C Strong Bitter), typically with a slightly different yeast character and a more varied malt profile. Less yeast character than many other Belgian beers, though.

Vital Statistics:
IBUs: 20 – 30
SRM: 8 – 14

OG: 1.048 – 1.054
FG: 1.010 – 1.014
ABV: 4.8 – 5.5%

Commercial Examples: De Koninck Bolleke, De Ryck Special, Palm, Palm Dobbler

Tags: standard-strength, amber-color, top-fermented, western-europe, traditional-style, pale-ale-family, balanced

24C. Bière de Garde

Three main variations are included in the style: the **blond** (blonde), the **brown** (brune), and the most traditional **amber** (ambrée).

Overall Impression: A family of smooth, fairly strong, malty, lagered artisanal French beer with a range of malt flavors appropriate for the blond, amber, or brown color. All are malty yet dry, with clean flavors. Darker versions have more malt character, while paler versions can have more hops while still remaining malt-focused beers.

Aroma: Prominent malty richness, often with a complex, light-to-moderate intensity, toasty and bready character. Low to moderate esters. Low spicy, peppery, or herbal hops optional. Generally quite clean, although stronger versions may have a light, spicy alcohol note as it warms.

Paler versions are still malty but lack richer, deeper aromatics and may have a bit more hops.

Appearance: Blond, amber, and brown variations exist, with the color varying accordingly: golden-blond to reddish-bronze to chestnut brown. Clarity is brilliant to fair, but some haze is allowable. Well-formed head, generally white to off-white (varying with beer color), average persistence.

Flavor: Medium to high malty richness, often with a toasty, biscuity, toffee, or light caramel character. Low to moderate esters and alcohol flavors. Medium-low hop bitterness, giving a malty balance to the palate and aftertaste. Medium-dry to dry finish, not sweet, cloying, or heavy. Low spicy, peppery, or herbal hop flavor optional.

Malt flavor, depth, richness, intensity, and complexity increases with beer color. Darker versions will have more of an initial rich malty impression than paler versions but should not seem roasted. Paler versions can have slightly greater hop flavor.

Mouthfeel: Medium to medium-light body, often with a smooth, creamy-silky character. Moderate to high carbonation. Moderate alcohol warming, but should never be hot.

Comments: *Cellar, musty, moldy, or rustic* character often mentioned in literature are signs of mishandled imports, not fresh, authentic products. Age and oxidation can also increase fruitiness and caramel flavors, but increase harshness. While caramel and fruit can be part of the style, do not confuse the oxidation character for the proper base beer.

History: Name roughly means *beer for keeping*. A traditional farmhouse artisanal ale from the area around Lille in Northern France, historically brewed in early spring and kept in cold cellars for consumption in warmer weather. Although documented to exist in the 1800s, Jenlain is the prototypical modern amber lager version first bottled in the 1940s.

Characteristic Ingredients: Base malts vary by beer color, but usually include pale, Vienna, and Munich types. Crystal-type malts of varying color. Sugar adjuncts may be used. Lager or ale yeast fermented at cool ale temperatures, followed by long cold conditioning. Continental hops.

Style Comparison: Calling this a farmhouse beer invites comparisons to Saison, which has a completely different balance – Bière de Garde is malty and smooth, while Saison is hoppy and bitter. Actually has more of a similarity in malt profile to a Bock.

Entry Instructions: Entrant **must** specify *blond, amber, or brown* Bière de Garde. If no color is specified, the judge should attempt to judge based on initial observation, expecting a malt flavor and balance that matches the color.

Vital Statistics: OG: 1.060 – 1.080
IBUs: 18 – 28 FG: 1.008 – 1.016
SRM: 6 – 19 ABV: 6.0 – 8.5%

Commercial Examples: Ch'Ti Blonde, Jenlain Ambrée, La Choulette Brune, Russian River Perdition, Saint Sylvestre 3 Monts Blonde, Two Brothers Domaine Dupage

Tags: high-strength, pale-color, amber-color, any-fermentation, lagered, western-europe, traditional-style, amber-ale-family, malty

25. STRONG BELGIAN ALE

This category contains the pale, well-attenuated, balanced to bitter beers, often more driven by yeast character than malt flavors, with generally higher alcohol (although a range exists within styles).

25A. Belgian Blond Ale

Overall Impression: A golden, moderately-strong Belgian ale with a pleasantly subtle citrusy-spicy yeast complexity, smooth malty palate, and dry, soft finish.

Aroma: Light to moderate grainy-sweet, slightly toasty, or crackery malt. Subtle to moderate yeast profile featuring fruity-citrusy esters (like oranges or lemons), and background spicy-peppery phenols. Light earthy or spicy hop notes optional. Light perfumy alcohol and suggestions of a light malty sweetness can give a slight honey- or sugar-like character. Subtle yet complex.

Appearance: Deep yellow to deep gold color. Generally very clear. Large, dense, and creamy white to off-white head. Good head retention with Belgian lace.

Flavor: Similar to the aroma, with the light to moderate grainy-sweet malt flavor being perceived first. Faint, lightly caramelized sugar or honey-like sweetness on palate. Medium bitterness, with the malt slightly more prominent in the balance. Moderate to low yeast profile with orange or lemon esters, and slight spicy-peppery phenols. Can have a light perfumy character. Light hop flavor, can be spicy or earthy, complementing yeast. Finishes medium-dry to dry, smooth, and soft, with light alcohol and malt in the aftertaste.

Mouthfeel: Medium-high to high carbonation, can give mouth-filling bubbly sensation. Medium body. Light to moderate alcohol warmth, but smooth. Can be somewhat creamy.

Comments: Most commercial examples are in the 6.5 – 7% ABV range. Often has an almost lager-like character, which gives it a cleaner profile in comparison to many other Belgian styles. Flemish-speaking Belgians use the term *Blond*, while the French speakers spell it *Blonde*. Many monastic or artisanal Belgian beers are called *Blond* but those are not representative of this style.

History: Relatively recent development to further appeal to European Pils drinkers, becoming more popular as it is heavily marketed and widely distributed. Despite claims of links back to 1200, the beer style was created after World War II and first popularized by Leffe.

Characteristic Ingredients: Belgian Pils malt, aromatic malts, sugar or other adjuncts, Belgian Abbey-type yeast strains, continental hops. Spices are not traditionally used; if present, should be a background character only.

Style Comparison: Similar strength and balance as a Belgian Dubbel but gold in color and without the darker malt flavors. Similar character as a Belgian Strong Golden Ale or Belgian Tripel, although a bit maltier, not as bitter, and lower in alcohol.

Vital Statistics:

OG:	1.062 – 1.075
IBUs:	15 – 30
SRM:	4 – 6
FG:	1.008 – 1.018
ABV:	6.0 – 7.5%

Commercial Examples: Affligem Blond, Corsendonk Blond, Grimbergen Blonde, La Trappe Blond, Leffe Blond, Val-Dieu Blonde

Tags: high-strength, pale-color, top-fermented, western-europe, traditional-style, balanced

25B. Saison

Overall Impression: A family of refreshing, highly attenuated, hoppy, and fairly bitter Belgian ales with a very dry finish and high carbonation. Characterized by a fruity, spicy, sometimes phenolic fermentation profile, and the use of cereal grains and sometimes spices for complexity. Several variations in strength and color exist.

Aroma: A pleasantly aromatic mix of fruity-spicy yeast and hops. The fruity esters are moderate to high, and often have a citrus fruit, pome fruit, or stone fruit character. Low to moderately-high spicy notes are often like black pepper, not clove. Hops are low to moderate and have a continental character (spicy, floral, earthy, or fruity). The malt is often overshadowed, but if detected is lightly grainy. Spices and herbs optional, but must not dominate. Sourness optional (see Comments).

Strong versions have more aromatic intensity, and can add a light alcohol and moderate malt character. Table versions have less intensity and not have an alcohol character. Darker versions add malt character associated with darker grains.

Appearance: Pale gold to deep amber in color, sometimes pale orange. Long-lasting, dense, rocky white to ivory head. Belgian lace. Unfiltered, so clarity is variable (poor to good) and may be hazy. Effervescent.

Darker versions can be copper to dark brown. Stronger versions may be a little deeper in color.

Flavor: A balance of fruity and spicy yeast, hoppy bitterness, and grainy malt with moderate to high bitterness, and a very dry finish. The fruity and spicy aspects are medium-low to medium-high, and hop flavor is low to medium, both with similar character as in the aroma (same descriptors apply). Malt is low to medium, with a soft, grainy palate. Very high attenuation, never with a sweet or heavy finish. Bitter, spicy aftertaste. Spices and herbs optional, but if used must be in harmony with the yeast. Sourness optional (see Comments).

Darker versions will have more malt character, including flavors from the darker malts. Stronger versions will have greater malt intensity, and a light alcohol note.

Mouthfeel: Light to medium-low body. Very high carbonation. Effervescent. Light warming alcohol optional. Sourness rare but optional (see Comments).

Stronger versions can have up to medium body and be somewhat warming. Table versions have no warmth.

Comments: This style generally describes the standard-strength pale version, followed by differences for variations in strength and color. Darker versions tend to have more malt character and less apparent hop bitterness, yielding a more balanced presentation. Stronger versions often have more malt flavor, richness, warmth, and body simply due to the higher gravity. There is no correlation between strength and color. Sourness is totally optional, and if present at low to moderate levels, it may substitute somewhat for bitterness in the balance. A Saison should not be both sour and bitter at the same time. The high attenuation may make the beer seem more bitter than the IBUs suggest. Pale versions are often more bitter and hoppy than darker versions. Yeast selection often drives the

balance of fruity and spicy notes, and can change the character significantly; allow for a range of interpretations.

Often called Farmhouse ales in the US, but this term is not common in Europe where they are simply part of a larger grouping of artisanal ales. Brettanomyces is not typical for this style; Saisons with Brett should be entered in the 28A Brett Beer style. A Grisette is a well-known type of Saison popular with miners; enter Grisette as 25B Saison, Session Strength, Comment: Grisette with wheat as the character grain.

History: A provision ale from Wallonia, the French-speaking part of Belgium. Originally a lower-alcohol product so as to not debilitate farm and field workers, but tavern-strength products also existed. The best known modern saison, Saison Dupont, was first produced in the 1920s. Dupont's super saison was first produced in 1954, and its brown version in the mid-1980s. Fantôme began producing its 'seasonal' saisons in 1988. While the style retains its rustic image, they are now mostly made in large breweries.

Characteristic Ingredients: Pale base malt. Cereal grains, such as wheat, oats, spelt, or rye. May contain sugary adjuncts. Continental hops. Spicy-fruity Belgian Saison yeast. Spices and herbs are uncommon, but allowable if they don't dominate.

Style Comparison: The pale, standard strength version is like a more highly-attenuated, hoppy, and bitter Belgian Blond Ale with a stronger yeast character. At super strength and pale color, similar to a Belgian Tripel, but often with more of a grainy, rustic quality and sometimes with a spicier yeast character.

Entry Instructions: The entrant **must** specify the *strength* (table, standard, super) and the *color* (pale, dark). The entrant **may** identify character grains used.

Vital Statistics:	OG: 1.048 – 1.065 (<i>standard</i>)
IBUs: 20 – 35	FG: 1.002 – 1.008 (<i>standard</i>)
SRM: 5 – 14 (<i>pale</i>)	ABV: 3.5 – 5.0% (<i>table</i>)
15 – 22 (<i>dark</i>)	5.0 – 7.0% (<i>standard</i>)
	7.0 – 9.5% (<i>super</i>)

Commercial Examples: Ellezelloise Saison 2000, Lefebvre Saison 1900, Saison Dupont, Saison de Pipaix, Saison Voisin, Boulevard Tank 7

Tags: standard-strength, pale-color, top-fermented, western-europe, traditional-style, bitter

25C. Belgian Golden Strong Ale

Overall Impression: A very pale, highly attenuated, strong Belgian ale that is more fruity and hoppy than spicy. Complex and delicate, the dry finish, light body, and high carbonation accentuate the yeast and hop character. Sparkling carbonation and effervescent, forming a rocky white head.

Aroma: A complex bouquet of fruity esters, herbal hops, and peppery alcohol over a nearly neutral malt base. The esters are moderate to high, often pome fruit, especially pear. Hops are herbal, floral, or spicy, low to moderate. Alcohol and phenols often have a peppery or perfumy quality, low to moderate. Alcohol perception should be soft, not hot or solventy. Nearly neutral malt, possibly slightly grainy-sweet.

Appearance: Pale yellow to gold in color. Good clarity. Effervescent. Massive, long-lasting, rocky, white head resulting in characteristic Belgian lace on the glass as it fades.

Flavor: Flavor profile similar to aroma (same descriptors and intensities apply) for esters, hops, malt, phenols, and alcohol. The pear-like esters, peppery alcohol, herbal hops, and soft malt flavors carry through the palate into the long, dry finish and aftertaste. Medium to high bitterness, accentuated by the dry finish and high carbonation, lasts into the aftertaste.

Mouthfeel: Very highly carbonated. Effervescent. Light to medium body, lighter than the substantial gravity would suggest. Carbonation accentuates the perception of lightness. Smooth but noticeable alcohol warmth, not hot or solventy.

Comments: References to the devil are included in the names of many commercial examples of this style, referring to their potent alcoholic strength and as a tribute to the original example (Duvel). Traditionally bottle-conditioned.

History: Developed by the Moortgat brewery after WWI as a response to the growing popularity of Pilsner beers. Originally a darker beer, it achieved its modern form by the 1970s.

Characteristic Ingredients: Pilsner malt with substantial sugary adjuncts. Continental hops. Fruity Belgian yeast. Fairly soft water. Spicing not traditional.

Style Comparison: Often confused with Belgian Tripel, but is usually paler, lighter-bodied, crisper, and drier. Tends to use yeast that favor ester development (particularly pome fruit) over spiciness in the balance, and has more of a late hop character.

Vital Statistics:	OG: 1.070 – 1.095
IBUs: 22 – 35	FG: 1.005 – 1.016
SRM: 3 – 6	ABV: 7.5 – 10.5%

Commercial Examples: Brigand, Delirium Tremens, Duvel, Judas, Lucifer, Russian River Damnation

Tags: very-high-strength, pale-color, top-fermented, western-europe, traditional-style, bitter

26. MONASTIC ALE

Religious institutions have a long history of brewing in Belgium, although often interrupted by conflict and occupation such as during the Napoleonic Wars and World War I. Very few such institutions actually brew today, although many have licensed their names to commercial breweries. Despite the limited production, the traditional styles derived from these breweries have been quite influential and have spread beyond Belgium.

Various terms have been used to describe these beers, but many are protected appellations and reflect the origin of the beer rather than a style. Those monasteries could brew any style they choose, but the ones described in this category are those that are most commonly associated with this brewing tradition.

We differentiate beers in this category as those that were inspired by religious breweries. Despite claims of uniqueness, these beers do share a number of common attributes that help characterize the styles. All are top-fermenting, have very high attenuation (“more digestible” in Belgium), achieve high carbonation through bottle conditioning (“referred in the bottle” in Belgium), and have distinctive, complex, and aggressive ‘Belgian’ spicy-estery yeast character. Many are strong in alcohol.

26A. Belgian Single

Overall Impression: A blond, bitter, hoppy table beer that is very dry and highly carbonated. The aggressive fruity-spicy Belgian yeast character and high bitterness is forward in the balance, with a soft, supportive grainy-sweet malt palate, and a spicy-floral hop profile.

Aroma: Medium-low to medium-high Belgian yeast character, showing a fruity-spicy character along with medium-low to medium spicy or floral hops, rarely enhanced by light herbal or citrusy spice additions. Low to medium-low malt backdrop, with bready, crackery, grainy, or light honey notes. Fruit expression can vary widely (apple, pear, grapefruit, lemon, orange, peach, apricot). Phenols are typically like black pepper or clove. Bubblegum inappropriate.

Appearance: Pale yellow to medium gold color. Generally good clarity, with a moderate-sized, persistent, billowy white head with characteristic lacing.

Flavor: Initial malty flavor is light and has a honeyed biscuit, bready, or cracker character. Grainy but soft malt palate, and a crisp, dry, hoppy-bitter finish. Moderate spicy or floral hop flavor on the palate. Moderate esters similar in character to aroma. Light to moderate spicy phenols as found in the aroma. Medium to high bitterness, accentuated by dryness. The yeast and hop character lasts into the aftertaste.

Mouthfeel: Medium-light to medium body. Smooth. Medium-high to high carbonation, can be somewhat prickly. Should not have noticeable alcohol warmth.

Comments: Often not labeled or available outside the monastery, or infrequently brewed. Might also be called monk’s beer, Brother’s beer, or simply a Blond (we don’t use this term to avoid confusion with the very different Belgian Blond Ale style). Highly attenuated, generally 85% or more.

History: While monastic breweries have a tradition of brewing a lower-strength beer as a monk’s daily ration (Westmalle began making theirs in 1922), the bitter, pale beer this style describes is a relatively modern invention reflecting current tastes. Westvleteren first brewed theirs in 1999, but it replaced older lower-gravity products.

Characteristic Ingredients: Pilsner malt. Belgian yeast. Continental hops.

Style Comparison: Like a top-fermented Belgian interpretation of a German Pils – pale, hoppy, and well-attenuated, but with a strong Belgian yeast character. Has less sweetness, higher attenuation, less character malt, and is more hop-centered than a Belgian Pale Ale. More like a much smaller, more highly-hopped Belgian Tripel (with its bitterness and dryness) than a smaller Belgian Blond Ale.

Vital Statistics: OG: 1.044 – 1.054
IBUs: 25 – 45 FG: 1.004 – 1.010
SRM: 3 – 5 ABV: 4.8 – 6.0%

Commercial Examples: Chimay Gold, La Trappe Puur, Russian River Redemption, St. Bernardus Extra 4, Westmalle Extra, Westvleteren Blond

Tags: standard-strength, pale-color, top-fermented, western-europe, craft-style, bitter, hoppy

26B. Belgian Dubbel

Overall Impression: A deep reddish-copper, moderately strong, malty, complex Belgian ale with rich malty flavors, dark or dried fruit esters, and light alcohol blended together in a malty presentation that still finishes fairly dry.

Aroma: Moderate to moderately strong, rich malty aroma, with hints of chocolate, caramelized sugar, or toast. Never roasted or burnt. Moderate fruity esters, often dark or dried fruit, especially raisins and plums, sometimes pome fruit or banana. Low to moderate spicy, peppery phenols. Hops typically absent, but can have a low spicy, herbal, or floral character. The malt is strongest in the balance, with esters and spice adding complexity. Low soft, perfumy alcohol optional.

Appearance: Dark amber to copper in color, with an attractive reddish depth of color. Generally clear. Large, dense, and long-lasting creamy off-white head.

Flavor: Flavor profile similar to aroma (same descriptors and intensities apply) for malt, esters, phenols, alcohol, and hops. Medium-low to medium bitterness, but malt is always most prominent in the balance. The esters and phenols add complexity and interest to the malt, alcohol not typically tasted. Malty-rich, sometimes sweet flavor, that finishes moderately dry with a malty aftertaste accented by yeast esters and phenols.

Mouthfeel: Smooth, medium to medium-full body. Medium-high carbonation, which can influence the perception of body. Low alcohol warmth optional, never hot or solventy.

Comments: Most commercial examples are in the 6.5 – 7% ABV range. Can taste somewhat sweet due to restrained bitterness, but the beers are actually fairly dry.

History: While dark and strong beers were produced long before, modern Dubbel traces back to the double brown or strong beer first produced at Westmalle in 1922 when the brewery was re-established after World War I. Other examples date from post-World War II.

Characteristic Ingredients: Spicy-estery Belgian yeast. Impression of a complex grain bill, although many traditional versions are quite simple, with caramelized sugar syrup or unrefined sugars and yeast providing much of the complexity.

Continental hops. Spices not typical; if present, should be subtle.

Style Comparison: Perhaps similar to a Dunkles Bock but with a Belgian yeast and sugar character. Similar in strength and balance to a Belgian Blond Ale, but with a richer malt and ester profile. Less strong and intense than a Belgian Dark Strong Ale.

Vital Statistics: OG: 1.062 – 1.075
IBUs: 15 – 25 FG: 1.008 – 1.018
SRM: 10 – 17 ABV: 6.0 – 7.6%

Commercial Examples: Chimay Red, Corsendonk Bruin, La Trappe Dubbel, Rochefort 6, St. Bernardus Pater 6, Westmalle Dubbel

Tags: high-strength, amber-color, top-fermented, western-europe, traditional-style, malty

26C. Belgian Tripel

Overall Impression: A strong, pale, somewhat spicy Belgian ale with a pleasant rounded malt flavor, firm bitterness, and dry finish. Quite aromatic, with spicy, fruity, and light alcohol notes combining with the supportive clean malt character to produce a surprisingly drinkable beverage considering the high alcohol content.

Aroma: Complex but seamless bouquet of moderate to significant spiciness, moderate fruity esters, low alcohol, low hops, and light malt. Generous spicy, peppery, sometimes clove-like phenols. Esters often reminiscent of citrus fruit, like oranges or lemons, but may sometimes have a slight ripe banana character. A low yet distinctive spicy, floral, sometimes perfumy hop character is optional. Alcohols are soft, spicy, and low in intensity. The malt character is light, with a soft, slightly grainy-sweet, or slightly honey-like impression.

Appearance: Deep yellow to pale amber in color. Good clarity. Effervescent. Long-lasting, creamy, rocky, white head resulting in characteristic Belgian lace on the glass as it fades.

Flavor: Flavor profile similar to aroma (same descriptors apply) for malt, esters, phenols, alcohol, and hops. Esters low to moderate, phenols low to moderate, hops low to moderate, alcohol low, all well combined in a coherent presentation. Medium to high bitterness, accentuated by a dry finish. Moderate bitterness in the aftertaste with substantial spicy-fruity yeast character. Should not be sweet.

Mouthfeel: Medium-light to medium body, although lighter than the substantial gravity would suggest. Highly carbonated. The alcohol content is deceptive, and has little to no obvious warming sensation. Effervescent. Should not be heavy.

Comments: High in alcohol but does not taste strongly of alcohol. The best examples are sneaky, not obvious. High carbonation and attenuation helps bring out the many flavors and to increase the perception of a dry finish. Most traditional versions have at least 30 IBUs and are very dry.

History: Popularized by the monastery at Westmalle, first brewed in 1934.

Characteristic Ingredients: Pilsner malt, often pale sugar adjuncts. Continental hops. Spicy-fruity Belgian yeast strains. Spice additions are generally not traditional, and if used, should be a background character only. Fairly soft water.

Style Comparison: May resemble a Belgian Golden Strong Ale but slightly darker and a bit fuller-bodied, with more emphasis on phenols and less on esters, and fewer late hops. Should not seem like a blond Barleywine.

Vital Statistics: OG: 1.075 – 1.085
IBUs: 20 – 40 FG: 1.008 – 1.014
SRM: 4.5 – 7 ABV: 7.5 – 9.5%

Commercial Examples: Chimay Tripel, La Rulles Tripel, La Trappe Tripel, St. Bernardus Tripel, Val-Dieu Triple, Westmalle Tripel

Tags: high-strength, pale-color, top-fermented, western-europe, traditional-style, bitter

26D. Belgian Dark Strong Ale

Overall Impression: A dark, complex, very strong Belgian ale with a delicious blend of malt richness, dark fruit flavors, and spicy notes. Complex, rich, smooth, and dangerous.

Aroma: A complex and fairly intense mix of rich maltiness and deep fruit, accentuated by spicy phenols and alcohol. The malt character is moderately-high to high and has a deep, breadly-toasty base with dark caramel notes, but no impression of dark or roasted malt. Esters are strong to moderately low, and reminiscent of raisins, plums, dried cherries, figs, dates, or prunes. Spicy phenols like black pepper or vanilla, not clove, may be present as a low to moderate background character. A soft, spicy, perfumy, or rose-like alcohol is low to moderate, but never hot or solvent-like. Hops are usually not noticeable, but if present can add a light spicy, floral, or herbal character.

Appearance: Deep amber to deep coppery-brown in color (*dark* in the style name implies *more deeply colored than golden*, not *black*). Huge, dense, moussy, persistent cream- to light tan-colored head. Usually clear.

Flavor: Rich and complex maltiness, but not heavy in the finish. The flavor character is similar to the aroma (same malt, ester, phenol, alcohol, and hop comments apply here as well). Moderately malty-rich on the palate, which can have a sweet impression if bitterness is low. Usually moderately dry to dry finish, although may be up to moderately sweet. Medium-low to moderate bitterness; alcohol provides some of the balance to the malt. Generally malty-rich balance, but can be fairly even with bitterness. The complex and varied flavors should blend smoothly and harmoniously, and often benefit from age. The finish should not be heavy or syrupy.

Mouthfeel: High carbonation but not sharp. Smooth but noticeable alcohol warmth. Body can range from medium-light to medium-full and creamy. Most are medium-bodied.

Comments: Also known as a Belgian Quad, mainly outside of Belgium (Quadruple is the name of a specific beer). Has a wider range of interpretation than many other Belgian styles. Traditional versions tend to be drier than many modern commercial versions, which can be rather sweet and full-bodied. Many examples are simply known by their strength or color designation. Some might be labeled Grand Cru, but this is more of a statement of quality than style.

History: Westvleteren started making their version just before World War II, with Chimay and Rochefort adding their examples just after. Other monastic breweries created products towards the end of the 20th century, but some secular breweries began producing similar beers starting around 1960.

Characteristic Ingredients: Spicy-estery Belgian yeast. Impression of a complex grain bill, although many traditional versions are quite simple, with caramelized sugar syrup or unrefined sugars and yeast providing much of the complexity. Continental hops. Spices not typical; if present, should be subtle.

Style Comparison: Like a larger Belgian Dubbel, with a fuller body and increased malt richness. Not as bitter or hoppy as a Belgian Tripel, but of similar strength.

Vital Statistics: OG: 1.075 – 1.110
IBUs: 20 – 35 FG: 1.010 – 1.024
SRM: 12 – 22 ABV: 8.0 – 12.0%

Commercial Examples: Achel Extra Bruin, Boulevard The Sixth Glass, Chimay Blue, Rochefort 10, St. Bernardus Abt 12, Westvleteren 12

27. HISTORICAL BEER

The Historical Beer category contains styles that either have all but died out in modern times, or that were much more popular in past times and are now known only through recreations. This category can also be used for traditional or indigenous beers of cultural importance within certain countries. Placing a beer in the historical category does not imply that it is not currently being produced, just that it is a very minor style or perhaps is in the process of rediscovery by craft brewers.

Historical Beer can be a minor style, currently commercially produced or not, that is not present in the Style Guidelines as a Classic Style. It could be that we haven't heard of it, that we never see it in competition, or that we have insufficient data to prepare a reasonable set of judging guidelines. If it is a style with a name that is or was actually used, then it likely goes into this category. This style is not for experimental beers that were never produced, or for other Classic Styles with added Specialty-Type ingredients.

Any Historical Beer listed in this category or contained on the Provisional Style list is considered a Classic Style for purposes of entering in Specialty-Type beer categories with added ingredients (fruit, spice, wood, smoke, etc.). This means a Historical Style beer can be used as a base style for Specialty-Type beers without automatically making the beer Experimental.

The BJCP welcomes well-researched submissions of Historical Styles that may be appropriate for our Provisional Styles list on our website, or for a future inclusion in these Guidelines.

Entry Instructions: *The entrant must either specify a style with a BJCP-supplied description from the list below, or specify a different historical beer style that is not described elsewhere in these guidelines. In the case of a style that has changed substantially over the years (such as Porter or Stout), the entrant may specify an existing BJCP style as well as an era (e.g., 1820 English Porter). When the entrant specifies any style not on the BJCP-supplied list in this category or on the Provisional Style list, the entrant must provide a description of the style for the judges in sufficient detail to allow the beer to be judged. If a beer is entered with just a style name and no description, it is very unlikely that judges will understand how to judge it. Currently defined examples: Kellerbier, Kentucky Common, Lichtenhainer, London Brown Ale, Piwo Grodziskie, Pre-Prohibition Lager, Pre-Prohibition Porter, Roggenbier, Sahti.*

Historical Beer: Kellerbier

The original Kellerbier is a Märzen-type lager from the Franconia region of Germany, but other traditional versions are based on Munich Helles and Dunkel lagers. Variations based on Pils are a more modern invention with a wider international following and higher production.

Overall Impression: An unfiltered, unpasteurized, fully-attenuated German lager traditionally served from lagering vessels. May be a little richer, more robust, and rustic than the base styles. A fresh beer without fermentation defects associated with young, green (unfinished) beer.

Aroma: Reflects base style. May have an added bready, yeasty character from the yeast. Clean. Pale versions can have a more robust hop character. Dark versions can have a richer malt profile.

Appearance: Reflects base style. Can be somewhat hazy or cloudy, but never murky. Likely a little darker in appearance than the base style.

Flavor: Reflects base style. May have an added bready, yeasty character from the yeast. Pale versions can have a more robust hop character. Dark versions can have a richer malt profile, but should never be roasty. May be slightly more bitter than the base style, and be a little heavier in the finish. Fully fermented with a clean fermentation profile; should not have eggy, buttery, apple-like, or similar flaws.

Mouthfeel: Reflects base style. May have a bit more body and a creamier texture than the base style. Carbonation typical of the base style, but may be lower.

Comments: A traditional serving style more than a beer style, yet these beers do have sensory differences from the base beers. Judge these somewhat like Specialty-Type Beers;

consider the range of kellerbiers based on Helles to Märzen to Dunkel to be a continuous spectrum, so allow the brewer to pick the closest one without being too picky about strict adherence to the base style.

The name literally means *cellar beer*, and is a natural, gentle handling of fresh-tasting German lagerbier for seasonal, on-premise service. Like British Bitters, best enjoyed locally as the bottled examples may lack the characteristic freshness.

History: Originally referred to lager beer matured in the caves or cellars under the brewery, and then served from them. First applied to amber lager from Franconia, then later to local Munich styles. More recently used internationally to create specialty Pils variants. By tradition, a serving style for a popular summer specialty in Bavaria, but now adapted broadly as a marketing term for unfiltered lagers.

Characteristic Ingredients: Same as base styles. Traditionally naturally carbonated. Dry-hopping is not a traditional German brewing method, but some modern pale examples use this technique – which is allowable in this style as long as it is balanced. Traditionally lagered and unfiltered, these beers were never meant to be packaged for external sale.

Style Comparison: Richer or more robust than the base style, possibly with a bit more body and mouthfeel. Can be slightly cloudier than base beer.

Entry Instructions: The entrant **must** specify the base style: German Pils, Munich Helles, Märzen, or Munich Dunkel.

Vital Statistics: Same as base style.

Commercial Examples: **Märzen** – Faust Kräusen Naturtrüb, Mahrs Bräu aU Ungespundet Kellerbier; **Dunkel** – Engel Kellerbier Dunkel, Paulaner Ur-Dunkel Naturtrüb; **Helles** – ABK Kellerbier Naturtrüb, Löwenbräu 1747 Original; **Pils** – Giesinger Feines Pilschen, Ketterer Zwickel-Pils

Tags: standard-strength, bottom-fermented, central-europe, traditional-style, balanced

Historical Beer: Kentucky Common

Overall Impression: A clean, dry, refreshing, slightly malty dark beer with high carbonation. Mild-tasting, with light toast and caramel flavors, served very fresh as a sessionable saloon beer.

Aroma: Low to medium grainy, corn-like, or sweet maltiness with a low toast, biscuity-grainy, bready, or caramel malt accent. Medium to moderately-low hop aroma, usually floral or spicy in character. Clean fermentation profile, with possible faint berry ester. Low levels of DMS optional. No sourness. Malt-forward in the balance.

Appearance: Amber-orange to brown in color. Typically clear, but may have some light haze. Foam stand may not be long lasting, and is usually white to beige in color.

Flavor: Moderate grainy-sweet maltiness with low to medium-low caramel, toffee, bready, or biscuity notes. Generally light palate flavors typical of adjunct beers; a low grainy, corn-like sweetness is common. Medium to low floral or spicy hop flavor. Medium to low bitterness, no coarse or harsh aftertaste. May exhibit light fruitiness. Balance in the finish is towards the malt, possibly with a lightly flinty or mineral-sulfate flavor. The finish is fairly dry. No sourness.

Mouthfeel: Medium to medium-light body with a relatively soft mouthfeel. Highly carbonated. Can have a creamy texture.

Comments: Modern accounts of the style often mention lactic sourness or sour mashing, but brewing records from around 1900 at larger breweries have no indication of long acid rests, sour mashing, or extensive aging. These stories are likely modern homebrewer inventions, theorizing that since local Bourbon distillers used a sour mash, beer brewers must also do so. No records indicate sour mashing or even a sour profile in the beer; rather the opposite, that it was brewed as an inexpensive, present-use ale. Enter soured versions in 28B Mixed-Fermentation Sour Beer.

History: An American original, Kentucky Common was almost exclusively produced and sold around Louisville, Kentucky from some time after the Civil War until Prohibition. It was inexpensive and quickly produced, racked into barrels while actively fermenting, and tightly bunged to allow carbonation in the saloon cellar. Before the style died, it accounted for about 75% of sales around Louisville.

Some have speculated it was a dark variant of Cream Ale, created by immigrant Germanic brewers who added darker grains to help acidity the local carbonate water.

Characteristic Ingredients: Six-row barley malt. Corn grits. Caramel and black malt. Rustic American bittering hops. Imported Continental finishing hops. High carbonate water. Ale yeast.

Style Comparison: Like a darker-colored Cream Ale emphasizing corn, but with some light character malt flavor. Malt flavors and balance are probably closest to modern adjunct-driven International Amber or Dark Lagers, Irish Red Ales, or Belgian Pale Ales.

Vital Statistics:
OG: 1.044 – 1.055
IBUs: 15 – 30
SRM: 11 – 20
FG: 1.010 – 1.018
ABV: 4.0 – 5.5%

Commercial Examples: Apocalypse Brew Works 1912

Tags: standard-strength, amber-color, top-fermented, north-america, historical-style, balanced

Historical Beer: Lichtenhainer

Overall Impression: A sour, smoked, lower-gravity historical central European wheat beer. Complex yet refreshing character due to high attenuation and carbonation, along with low bitterness and moderate sourness.

Aroma: Moderately strong fresh smoky aroma. Light hints of sourness. Medium-low fruity esters, possibly apples or lemons. Moderate bready, grainy malt. The smoke character is stronger than the bready notes, and the smoke has a 'dry' character, like the remnants of an old fire, not a 'greasy' smoke. No hops.

Appearance: Tall off-white head, rocky and persistent. Yellow to gold color. Fair clarity, may be somewhat hazy.

Flavor: Moderately strong fruity flavor, possibly lemons or apples. Moderate intensity, clean lactic tartness without any funkiness. Similar dry wood smoke character as aroma, medium strength. Dry finish, with acidity and smoke in the aftertaste. Low bitterness; acidity is providing the balance, not hops. Fresh, clean palate, and slightly puckery aftertaste. The wheat character is on the low side; the smoke and acidity are more prominent in the balance. The tart, lemony, or green apple flavor is strongest in the finish, with smoke a close second. No hops.

Mouthfeel: Tingly acidity. High carbonation. Medium to medium-light body.

Comments: Served young. Smoke and sour is an unusual combination that can be an acquired taste.

History: Originating in Lichtenhain, in Thüringen (central Germany). Height of popularity was towards the end of the 1800s, and was widely available throughout Thüringen. Like a pre-1840 Berliner Weisse.

Characteristic Ingredients: Smoked barley malt, wheat malt, Lacto, top-fermenting yeast. Grist varies, but the wheat would typically be 30-50%. Can be made with all barley malt.

Style Comparison: In the same general historical lower-alcohol central European wheat beer family as Gose, Grodziskie, and Berliner Weisse; has elements of all of them but with its own unique balance – sour and smoke is not found in any of the other styles. Not as acidic as Berliner Weisse, probably more like a smoked Gose without coriander and salt, or a Grodziskie with Gose-like acidity.

Vital Statistics:
OG: 1.032 – 1.040
IBUs: 5 – 12
SRM: 3 – 6
FG: 1.004 – 1.008
ABV: 3.5 – 4.7%

Commercial Examples: Live Oak Lichtenhainer, Wöllnitzer Weissbier

Tags: standard-strength, pale-color, top-fermented, central-europe, historical-style, wheat-beer-family, sour, smoke

Historical Beer: London Brown Ale

Overall Impression: A luscious, sweet, malty, low-alcohol dark brown ale, with caramel and toffee malt complexity and a sweet-tasting finish.

Aroma: Moderate malty-sweet aroma, often with a rich, caramel, or toffee-like character. Low to medium fruity esters, often dark fruit like plums. Very low earthy or floral hop aroma optional.

Appearance: Medium to very dark brown color, but can be almost black. Nearly opaque, although should be relatively clear if visible. Low to moderate off-white to tan head.

Flavor: Deep, caramel or toffee sweet malty flavor on the palate, lasting into the finish, often with hints of biscuit and coffee. Some dark fruit esters can be present; relatively clean

fermentation profile for an English ale. Low bitterness. Low earthy or floral hop flavor optional, but rare. Moderately-low roasty or bitter black malt flavor optional. Moderately sweet finish with a smooth, malty aftertaste. May have a sugary-sweet flavor.

Mouthfeel: Medium body, but the residual sweetness may give a heavier impression. Medium-low to medium carbonation. Quite creamy and smooth in texture, particularly for its gravity.

Comments: Increasingly rare; Mann's has over 90% market share in Britain, but in a vanishingly small segment. Always bottled. Frequently used as a sweet mixer with cask mild and bitter in pubs. Commercial versions can be pasteurized and back-sweetened, which gives more of a sugary-sweet flavor.

History: Developed by Mann's as a bottled product in 1902. Claimed at the time to be "the sweetest beer in London." Pre-WWI versions were around 5% ABV, but same general balance. Declined in popularity in second half of 20th century, and now nearly extinct.

Characteristic Ingredients: English pale ale malt as a base with a large proportion of darker caramel malts and often some black and wheat malts (this is Mann's traditional grist – others can rely on dark sugars for color and flavor). Moderate to high carbonate water. English hops. Post-fermentation sweetening with lactose or artificial sweeteners, or sucrose, if pasteurized.

Style Comparison: May seem somewhat like a less roasty version of a Sweet Stout (and lower-gravity, at least for US sweet stout examples) or a sweet version of a Dark Mild.

Vital Statistics:
OG: 1.033 – 1.038
IBUs: 15 – 20
SRM: 22 – 35

FG: 1.012 – 1.015
ABV: 2.8 – 3.6%

Commercial Examples: Harveys Bloomsbury Brown Ale, Mann's Brown Ale

Tags: session-strength, dark-color, top-fermented, british-isles, historical-style, brown-ale-family, malty, sweet

Historical Beer: Piwo Grodziskie

Overall Impression: A low-gravity, bitter, oak-smoked historical central European wheat beer with a clean fermentation profile and no sourness. Highly carbonated, dry, crisp, and refreshing.

Aroma: Low to moderate oak wood smoke is the most prominent aroma component, but can be subtle and hard to detect. A low spicy, herbal, or floral hop aroma is typically present, and should be lower than or equal to the smoke in intensity. Hints of grainy wheat are also detected in the best examples. The aroma is otherwise clean, although light pome fruit esters (especially ripe red apple or pear) are welcome. No acidity. Light sulfur optional.

Appearance: Pale yellow to gold in color with excellent clarity. A tall, billowy, white, tightly-knit head with excellent retention is distinctive. Murkiness is a fault.

Flavor: Moderately-low to medium oak smoke flavor up front which carries into the finish; the smoke can be stronger in flavor than in aroma. The smoke character is gentle, should not be acrid, and can lend an impression of sweetness. A moderate to strong bitterness is readily evident which lingers through the finish. The overall balance is toward bitterness. Low but perceptible spicy, herbal, or floral hop flavor. Low grainy wheat character in the background. Light pome fruit esters (red apple or pear) may be present. Dry, crisp finish. No sourness.

Mouthfeel: Light in body, with a crisp and dry finish. Carbonation is quite high and can add a slight carbonic bite or prickly sensation. No alcohol warmth.

Comments: Pronounced in English as "pivo grow-JEES-kee-uh" (meaning: Grodzisk beer). Known as Grätzer (pronounced "GRATE-sir") in German-speaking countries, and in some beer literature. Traditionally made using a multi-step mash, a long boil (~2 hours), and multiple strains of ale yeast. The beer is never filtered but Isinglass is used to clarify before bottle conditioning. Traditionally served in tall conical glassware to accommodate the vigorous foam stand.

History: Developed as a unique style centuries ago in the Polish city of Grodzisk (known as Grätz when ruled by Prussia and Germany). Its fame and popularity rapidly extended to other parts of the world in the late 19th and early 20th century. Regular commercial production declined after WWII and ceased in the 1990s. This style description describes the traditional version during its period of greatest popularity.

Characteristic Ingredients: Oak-smoked wheat malt, which has a less intense smoke character than German Rauchmalz, and a drier, crisper, leaner quality – a smoky bacon or ham flavor is inappropriate. Traditional Polish, Czech or German hops. Moderate hardness sulfate water. Clean, attenuative ale yeast; Weizen yeast inappropriate.

Style Comparison: Similar in strength to a Berliner Weisse, but never sour and much more bitter. Has a smoked character but less intense than in a Rauchbier. Lower gravity than a Lichtenhainer, but more bitter and not sour. More bitter than a Gose, but no salt and spices.

Vital Statistics:
OG: 1.028 – 1.032
IBUs: 20 – 35
SRM: 3 – 6

FG: 1.006 – 1.012
ABV: 2.5 – 3.3%

Commercial Examples: Live Oak Grodziskie

Tags: session-strength, pale-color, top-fermented, central-europe, historical-style, wheat-beer-family, bitter, smoke

Historical Beer: Pre-Prohibition Lager

Overall Impression: A bitter and hoppy pale American adjunct lager, often with a robust, corny flavor profile, although more crisp and neutral-tasting versions exist.

Aroma: Low to medium grainy maltiness. Low to moderate corn-like sweetness optional. Medium to moderately-high rustic, floral, herbal, or spicy hop aroma, not modern fruity or citrusy varieties. Clean fermentation profile. May show some yeast character, similar to modern American Lager. Low DMS acceptable.

Appearance: Yellow to deep gold color. Substantial, long lasting white head. Bright clarity.

Flavor: Medium to medium-high maltiness with a grainy flavor. Optional corn-like roundness and impression of sweetness. Substantial hop bitterness stands up to the malt and lingers through the dry, soft to crisp finish. Medium to high rustic, floral, herbal, or spicy hop flavor. Medium to high bitterness that is clean not coarse. No harsh aftertaste. Generally neutral fermentation profile, but some yeast character similar to American Lager is allowable.

Mouthfeel: Medium to medium-full body with a moderately rich and creamy mouthfeel. Smooth and well-lagered. Medium to high carbonation levels.

Comments: Sometimes called Classic American Pilsner. Rice-based versions have a crisper, more neutral character, and lack corn-like flavors.

History: An adaptation of continental lagers by immigrant German brewers in the mid-1800s in the US. Became most popular by the 1870s, but weakened in strength, bitterness, and popularity after Prohibition, and was largely replaced by Standard American Lager. Resurrected by homebrewers in the mid-1990s, but few commercial examples exist.

Characteristic Ingredients: Six-row barley. Corn or rice adjuncts, up to 30%. Traditional American or Continental hops. Modern American hops are inappropriate. Lager yeast.

Style Comparison: Similar balance and bitterness as modern Czech Premium Pale Lagers, but exhibiting native American grains and hops from the era before US Prohibition. More robust, bitter, and flavorful than modern pale American Lagers, often with higher alcohol.

Vital Statistics: OG: 1.044 – 1.060
IBUs: 25 – 40 FG: 1.010 – 1.015
SRM: 3 – 6 ABV: 4.5 – 6.0%

Commercial Examples: Capital Supper Club, Coors Batch 19, Little Harpeth Chicken Scratch, Schell Deer Brand, Urban Chestnut Forest Park Pilsner

Tags: standard-strength, pale-color, bottom-fermented, lagered, north-america, historical-style, pilsner-family, bitter, hoppy

Historical Beer: Pre-Prohibition Porter

Overall Impression: A historical American adaptation of English Porter by German immigrants using American ingredients, including adjuncts.

Aroma: Grainy malt aroma with low levels of chocolate, caramel, biscuit, burnt sugar, licorice, or slightly burnt malt. Low hop aroma. Low to moderate low levels of corn or DMS acceptable. No to very low esters. Diacetyl low to none. Clean lager fermentation profile acceptable.

Appearance: Medium to dark brown, though some examples can be nearly black in color, with ruby or mahogany highlights. Relatively clear. Light to medium tan head, persistent.

Flavor: Moderate grainy-bready malt flavor, with low levels of chocolate, burnt malt, burnt sugar, caramel, biscuit, licorice, molasses, or toast. Corn or DMS flavor acceptable at low to moderate levels. Medium-low to moderate bitterness. Low floral, spicy, or earthy hop flavor optional. Balance is typically even between malt and hops, with a moderately dry finish. Clean fermentation profile, but faint esters are allowable.

Mouthfeel: Medium-light to medium body. Moderate carbonation. Low to moderate creaminess. May have a slight dark malt astringency.

Comments: Also sometimes known as Pennsylvania Porter or East Coast Porter. This style does not describe colonial-era products.

History: Commercially brewed in Philadelphia during the revolutionary period as an adaptation of English beer. Evolved later as German immigrants applied lager brewing methods during the second half of the 1800s. Prohibition ended most porter brewing in the US, except in a few regional Northeast and Mid-Atlantic states where it was most popular.

Characteristic Ingredients: Two row or six row malt. Low percentages of dark malts including black, chocolate, and brown malt (roasted barley is not typically used). Adjuncts are acceptable, including corn, brewers licorice, molasses, and portentine. More historical versions will have up to twenty percent adjuncts. Lager or ale yeast. Historical or traditional American bittering hops, American or German finishing hops.

Style Comparison: Smoother and less hoppy-bitter than a (modern) American Porter. Less caramelly and smoother than an English Porter with more of an adjunct or lager character. More bitterness and roast than an International Dark Lager.

Vital Statistics: OG: 1.046 – 1.060
IBUs: 20 – 30 FG: 1.010 – 1.016
SRM: 20 – 30 ABV: 4.5 – 6.0%

Commercial Examples: Stegmaier Porter, Yuengling Porter

Tags: standard-strength, dark-color, any-fermentation, north-america, historical-style, porter-family, malty

Historical Beer: Roggenbier

Overall Impression: A Dunkles Weissbier made with rye rather than wheat, but with a greater body and light finishing hops. The rye gives a bready and peppery flavor, a creamy body, and a dry, grainy finish that blends with the distinctive banana-and-clove weizen yeast character.

Aroma: Light to moderate spicy rye aroma (like black pepper) intermingled with light to moderate weizen yeast aromatics (spicy clove and fruity esters, either banana or citrus). Light spicy, floral, or herbal hops are acceptable.

Appearance: Light coppery-orange to very dark reddish or coppery-brown color. Large creamy off-white to tan head, quite dense and persistent, often thick and rocky. Cloudy, hazy appearance.

Flavor: Grainy, moderately-low to moderately-strong spicy-peppery rye flavor, often having a hearty flavor reminiscent of rye or pumpernickel bread. Medium to medium-low bitterness allows an initial malt sweetness (sometimes with a bit of caramel) to be tasted before yeast and peppery rye character takes over. Low to moderate banana-and-clove weizen yeast character, although the balance can vary. Medium-dry, grainy finish with a lightly bitter (from rye) aftertaste. Low to moderate spicy, herbal, or floral hop flavor acceptable, and can persist into aftertaste.

Mouthfeel: Medium to medium-full body. High carbonation. Moderately creamy.

Comments: Rye is a huskless grain and is difficult to mash, often resulting in a gummy mash texture that is prone to sticking. Rye has been characterized as having the most assertive flavor of all cereal grains. It is inappropriate to add caraway seeds, as some American brewers do; the spicy rye character is traditionally from the rye grain only.

History: A specialty German rye beer originally brewed in Regensburg, Bavaria in 1988 by Schierlinger. After eventual purchase by Paulaner, the beer is now positioned as a regional brand and thus hard to find as an export.

Characteristic Ingredients: Malted rye, up to 60% of the grist. Pale and wheat malts. Crystal-type malts and debittered dark malts can be used. Weizen yeast. German or Czech hops. Patented decoction type mash.

Style Comparison: A more distinctive variant of a Dunkles Weissbier using malted rye instead of malted wheat. American Rye Beers will not have the weizen yeast character, and likely more hops.

Vital Statistics: OG: 1.046 – 1.056
IBUs: 10 – 20 FG: 1.010 – 1.014
SRM: 14 – 19 ABV: 4.5 – 6.0%

Commercial Examples: Thurn und Taxis Roggen

Tags: standard-strength, amber-color, top-fermented, central-europe, historical-style, wheat-beer-family

Historical Beer: Sahti

Overall Impression: A sweet, heavy, strong traditional Finnish farmhouse beer usually with rye and juniper, and a banana-clove yeast character.

Aroma: Sweet, worty malt impression. Grainy malt, caramel, and rye in background. Light alcohol aroma. High banana esters with moderate to moderately-high clove-like phenols. May have a low to moderate woody juniper character. Not sour. No hops.

Appearance: Yellow to dark brown color; most are medium to dark amber. Generally quite cloudy and turbid. Little head, due to low carbonation.

Flavor: Fairly sweet and often worty raw malt flavor, grainy with some caramel and toffee. Low bitterness. No hop flavor. Light woody or piney character acceptable. Moderate to strong banana and fruitiness, moderate clove and spiciness. Fairly sweet finish. Fresh, not sour.

Mouthfeel: Thick, viscous, and heavy with protein (no boil means no hot break). Nearly still to medium-low carbonation, similar to English cask ale. Warming from the alcohol level and young age, but this is often masked by sweetness.

Comments: The use of rye doesn't mean that it should taste like caraway (a common flavor in rye bread). The juniper acts a

bit like hops in the balance and flavor, providing a flavor and bitterness counterpoint to the sweet malt. Piney, woody juniper character more common than gin-like berries.

History: An indigenous traditional style from Finland; a farmhouse tradition for at least 500 years, often brewed for festive occasions like summer weddings, and consumed within a week or two of brewing.

Characteristic Ingredients: Malted barley. Rye is common. Low hops, if any. Juniper boughs (with or without berries) used for lautering (traditionally in a hollowed-out log). Uses Finnish baker's yeast in a fast, warm fermentation (German Weizen yeast is a reasonable substitute). Long step mash regime. Wort is not boiled.

Style Comparison: Passing resemblance to Weizenbocks, but sweet and thick with a rye and juniper character.

Vital Statistics:

OG:	1.076 – 1.120
IBUs:	0 – 15
FG:	1.016 – 1.038
SRM:	4 – 22
ABV:	7.0 – 11.0%

Commercial examples: Now made year-round by several breweries in Finland.

Tags: high-strength, amber-color, top-fermented, central-europe, historical-style, spice

INTRODUCTION TO SPECIALTY-TYPE BEER

Specialty-Type Beer is a broad term referring to style Categories 28 through 34, and is in contrast to the **Classic Style** beers of Categories 1 through 27. The Classic Styles are complete, standalone descriptions, but Specialty-Type styles involve a transformation of a Base Style using either a process or by adding one or more **Specialty-Type Ingredients** (yeast/bacteria, smoke, wood, fruit, spice, grain, or sugar). Specialty-Type Beer style descriptions usually describe how the Specialty-Type Ingredients or processes modify the Base Style.

When a **Base Style** for Specialty-Type Beers is required, either a Classic Style or a broad style family (e.g., IPA, Blond Ale, Stout) may be used. In general, Specialty-Type beers may not be used as a Base Style for other Specialty-Type beers unless the Entry Instructions for the style specifically allow it. A few Specialty-Type Beer styles do not require a Base Style to be declared – read the Entry Instructions section of each style description carefully.

Consult the Provisional Styles page on the BJCP website for additions to the master list of styles. These Provisional Styles can be cited as a Base Style when entering a Specialty-Type Beer. The Style Entry Suggestions page on the BJCP website clarifies where to enter some currently undefined styles.

In general, when submitting a Specialty-Type Beer with a food-type ingredient, use the culinary rather than the botanical definition of ingredients. See the preamble in each style category for a detailed list of common ingredients.

This introduction section is assumed to be incorporated into every Specialty-Type Beer style description. It describes in general how to enter and judge a Specialty-Type Beer. Specific Entry Instructions for each style are contained within individual style descriptions.

Entering Specialty-Type Beers

Many brewers have questions about where to enter their specialty beers, and how best to describe them. Follow these suggestions for better results:

Entry Instructions

Entering a Specialty-Type Beer in a competition requires more information than simply selecting the style. Examine the *Entry Instruction* section within the selected style description for the specific required information. Judges will expect this information, and they will not be able to judge your beer properly without it; your score will suffer if it is omitted.

When deciding what optional information to supply, imagine yourself in the position of the judge. Give them pertinent information that will help them understand your beer and your intent. Avoid useless, irrelevant information that does not help the judge understand your beer. Do not use puffery or marketing-type descriptions. Refrain from using any information that could allow judges to determine your identity. Some competition software artificially limits the length of comments, so choose your words carefully.

Base Style

Most Specialty-Type Beers require either a Base Style to be identified, or at least a description of the beer – check the style's *Entry Instructions* for requirements. If a Base Style is required, use one of the named styles from Categories 1 through 27, including beers from styles or categories with enumerated alternatives (like Historical Beer or Specialty IPA). Provisional Styles from the BJCP website and Local Styles from the Appendix may also be used as a Base Style.

If the Entry Instructions say that a generic style family can be used, that means to state a broad style in the general sense – like IPA, Porter, or Stout. You are not required to pinpoint the specific type of Porter, for instance, but you should give a general description of the beer. Some beers that are designed to showcase a specialty ingredient have a fairly neutral base.

Do not use Specialty-Type Beers as a Base Style in other Specialty-Type Beer styles unless the Entry Instructions for that style specifically allow it. Many Specialty-Type style categories have a 'Specialty' style that allows for certain other Specialty-Type Ingredients. Otherwise, the 34B Mixed-Style Beer style can be used.

Specialty Ingredients

The more specific or lavish you describe your specialty ingredient, the more judges will look for that character. Taste your beer, then highlight those ingredients that are identifiable. If only one Specialty-Type ingredient was used, it should contribute a recognizable character to the beer. If you mention multiple ingredients, they do not all need to be individually identifiable but they should contribute to the overall sensory experience.

If you mention an unusual ingredient, you may want to describe its character, or at least be sure that a web search on that name will produce a useful reference for the judge. Providing a search term is a good alternative.

A generic or simple name of an ingredient is often best, unless your specific ingredient has an uncommon profile. If you use a combination of ingredients, such as spices, you can often refer to the blend by its common name (e.g., pumpkin pie spice, curry powder) rather than the individual spices.

If you use an ingredient that is a potential allergen, always declare it as such even if it cannot be perceived.

Example: “allergen: peanuts” – judges should not penalize a beer when a declared allergen cannot be detected.

Best Fit

Placing a beer with a single Specialty-Type Ingredient and a Classic Base Style is obvious. Selecting the best style for a beer with a combination of Specialty-Type Ingredients takes some thought. When selecting a style in which to enter your Specialty-Type Beer, look for the *best fit* from the possible alternatives where the combination of ingredients is allowed. Select a style representing the dominant ingredient, or if the ingredients are equally balanced, select the first Specialty-Type style where it qualifies.

Entering a beer in a Specialty-Type style is a signal to judges that your beer has certain identifiable elements. If you used an ingredient, but it cannot be perceived, then do not enter it in a style that requires the ingredient. If judges cannot detect it, they will believe it is absent and deduct points accordingly.

Judging Specialty-Type Beers

Judges should read and understand the directions given to entrants in the Entering Specialty-Type Beers section.

Overall balance and drinkability are the critical success factors for a Specialty-Type Beer. The entry should be a coherent fusion of the beer with the special ingredients, with neither overpowering the other.

Special ingredients should complement and enhance the underlying beer, and the resulting product should be pleasant to drink. The beer should contain recognizable components meeting entry requirements for the style, bearing in mind that some beers may fit in multiple styles.

Judges should be aware that a creative element exists in brewing these styles, and that strange-sounding combinations should not be prejudiced. Keep an open mind because some unusual flavor pairings can be surprisingly delicious. Unusual does not necessarily mean better, however. Taste should always be the final deciding factor, not perceived creativity, difficulty in brewing, or rarity of ingredients.

Overall Assessment

Experienced judges will often first taste Specialty-Type Beers for overall drinking pleasure prior to assessing details. This quick assessment is designed to detect whether the combination works or doesn't. If the beer has flavor clashes, it won't be enjoyable regardless of its technical merit.

The old proverb about *not missing the forest for the trees* is quite applicable. Do not judge these styles as rigidly as Classic Styles, as you might miss the successful synergy of ingredients.

Base Style

Judges should not be overly pedantic about seeking the full character of a specified Base Style beer. After all, the base beer does not usually contain the special ingredient, so the sensory character will not be the same as in the original beer. There can be interactions of flavor that produce additional sensory effects.

Judges should also understand that the fermentation process can transform some ingredients (particularly those with fermentable sugars), and that the special ingredient character in the beer may not be perceived the same as the specialty ingredient itself. Therefore, judges should look for the overall agreeability and balance of the resulting combination, as long as the beer suggests both the Base Style and the Specialty-Type Ingredient or process.

Multiple Ingredients

Judges do not need to taste every individual Specialty-Type Ingredient (such as spices) when multiple are declared. Often it is the resulting combination that contributes to a greater character, so allow for these ingredients to be used in varying intensities to produce a more pleasant tasting experience.

Not every beer will fit a style perfectly. Some beers with multiple ingredients could be entered as several styles. Be lenient when evaluating these beers. Reward those beers that are well-made and are pleasant to drink rather than lecturing the entrant about where they should have entered it.

If an entrant declares a potential allergen in the beer, do not deduct points if you cannot perceive it.

Balance Effects of Specialty-Type Ingredients

The Specialty-Type Ingredient character should be pleasant and supportive, not artificial or inappropriately overpowering, taking into account that some ingredients have an inherently prominent character. Aroma hops, fermentation byproducts, and malt components of the underlying beer may not be as noticeable when additional ingredients are present, and they may also be intentionally subdued to allow the ingredient character to be perceived more clearly in the final presentation.

Hop aroma may be absent or balanced with the added ingredients, depending on the style. The added ingredients should add an extra complexity to the beer, but not be so prominent as to unbalance the resulting presentation.

28. AMERICAN WILD ALE

The name **American Wild Ale** is commonly used by craft brewers and homebrewers. However, the word Wild does not imply that these beers are necessarily spontaneously-fermented; rather, it indicates that they are influenced by microbes other than traditional brewer's yeasts, or perhaps that they are mixed-fermentation beers. The use of the word American does not mean that the beer has to be based on a Classic Style American beer style, or that the methods are solely practiced in the United States. Base styles in this category do not have to be Classic Styles at all (although they can be); something like, "blond ale, 7%" would be fine, since the underlying style is often lost under the fermentation character.

This category is intended for a wide range of beers that do not fit traditional European sour, wild, or spontaneously-fermented styles. All of the styles in this category are Specialty-Type Beers where many creative interpretations are possible, and the styles are defined only by the use of specific fermentation profiles and ingredients. **As specialty styles, the mandatory description provided by the entrant is of the utmost importance to the judge.**

The styles in this category are differentiated by the types of yeast and bacteria used – see the preamble to each style for more information. We use the conversational shorthand terms used in the brewing industry: Brett for *Brettanomyces*, Sacch for *Saccharomyces*, Lacto for *Lactobacillus*, and Pedio for *Pediococcus*. See the Glossary for additional information. The Wild Specialty Beer style is for beers for other styles within this category when Specialty-Type Ingredients are added. Background levels of oak may be used in all styles within this category, but beers aged in other woods with unique flavors or barrels that contained other alcohol products must be entered in the Wild Specialty Beer style.

28A. Brett Beer

Intended for beer with or without oak aging that has been fermented with Sacch and Brett, or with Brett only.

Overall Impression: Most often drier and fruitier than the base style suggests. Fruity or funky notes range from low to high, depending on the age of the beer and strains of Brett used. May possess a light non-lactic acidity.

Aroma: Variable by base style. Young Brett beers will possess more fruity notes (e.g., tropical fruit, stone fruit, or citrus), but this is variable by the strains of Brett used. Older Brett beers may start to develop a little funk (e.g., barnyard, wet hay, or slightly earthy or smoky notes), but this character should not dominate.

Appearance: Variable by base style. Clarity can be variable, and depends on the base style and ingredients used. Some haze is not necessarily a fault.

Flavor: Variable by base style. Brett character may range from minimal to aggressive. Can be quite fruity (e.g., tropical fruit, berry, stone fruit, citrus), or have some smoky, earthy, or barnyard character. Should not be unpleasantly funky, such as Band-Aid, fetid, nail polish remover, cheese, etc. Always fruitier when young, gaining more funk with age. May not be lactic. Malt flavors are often less pronounced than in the base style, leaving a beer most often dry and crisp due to high attenuation by the Brett.

Mouthfeel: Variable by base style. Generally has a light body, lighter than what might be expected from the base style but an overly thin body is a fault. Generally moderate to high carbonation. Head retention is variable, but often less than the base style.

Comments: The base style describes most of the character of these beers, but the addition of Brett ensures a drier, thinner, and often fruitier and funkier product. Younger versions are brighter and fruitier, while older ones possess more depth of funk and may lose more of the base style character. The Brett character should always meld with the style; these beers should never be a 'Brett bomb'. While Brett can produce low levels of organic acids, it is not a primary beer souring method.

History: Modern American craft beer interpretations of Belgian wild ales, or experimentations inspired by Belgian wild ales or historical English beers with Brett. So-called 100% Brett beers gained popularity after the year 2000, but this was when *S. Trois* was thought to be a Brett strain (which it isn't). Brett

used in conjunction with a Sacch fermentation is standard practice now.

Characteristic Ingredients: Virtually any style of beer (except those already using a Sacch/Brett co-fermentation), then finished with one or more strains of Brett. Alternatively, a mixed fermentation with Sacch and one or more strains of Brett. No Lacto.

Style Comparison: Compared to the same beer style without Brett, a Brett Beer will be drier, more highly attenuated, fruitier, lighter in body, and slightly funkier as it ages. Less sourness and depth than Belgian 'wild' ales.

Entry Instructions: The entrant **must** specify **either** a Base Style, **or** provide a description of the ingredients, specs, or desired character. The entrant **may** specify the strains of Brett used.

Vital Statistics: Variable by base style.

Commercial Examples: Boulevard Saison Brett, Hill Farmstead Arthur, Logsdon Seizoen Bretta, Lost Abbey Brett Devo, Russian River Sanctification, The Bruery Saison Rue

Tags: wild-fermentation, north-america, craft-style, specialty-beer

28B. Mixed-Fermentation Sour Beer

Intended for beer fermented with any combination of Sacch, Lacto, Pedio, and Brett (or additional yeast or bacteria), with or without oak aging (except if the beer fits instead in 28A or 28D).

Overall Impression: A sour and funky version of a base style of beer.

Aroma: Variable by base style. The contribution of non-Sacch microbes should be noticeable to strong, and often contribute a sour and funky, wild note. The best examples will display a range of aromatics, rather than a single dominant character. The aroma should be inviting, not harsh or unpleasant.

Appearance: Variable by base style. Clarity can be variable; some haze is not a fault. Head retention can be poor.

Flavor: Variable by base style. Look for an agreeable balance between the base beer and the fermentation character. A range of results is possible from fairly high acidity and funk to a subtle, pleasant, harmonious beer. The best examples are pleasurable to drink with the esters and phenols complementing the malt or hops. The wild character can be prominent, but does not need to be dominating in a style with

an otherwise strong malt or hop profile. Acidity should be firm yet enjoyable, and ranging from clean to complex, but should not be biting or vinegary; prominent, objectionable, or offensive acetic acid is a fault. Bitterness tends to be low, especially as sourness increases.

Mouthfeel: Variable by base style. Generally has a light body, almost always lighter than what might be expected from the base style. Generally moderate to high carbonation, although often lower in higher alcohol examples.

Comments: The base beer style becomes less relevant in this style because the various yeast and bacteria tend to dominate the profile. Bitterness is often reserved since bitter and sour flavors clash on the palate. Inappropriate characteristics include diacetyl, solvent, ropy or viscous texture, and heavy oxidation.

History: Modern American craft beer interpretations of Belgian sour ales, or experimentations inspired by Belgian sour ales.

Characteristic Ingredients: Virtually any style of beer. Usually fermented by some combination of Lacto, Pedio, Sacch, and Brett. Can also be a blend of styles. Wood or barrel aging is very common, but not required; if present, should not be a primary or dominant flavor.

Style Comparison: A sour and funky version of a base style, but do not necessarily have to be as sour or as funky as some traditional European sour examples.

Entry Instructions: The entrant **must** specify a description of the beer, identifying yeast or bacteria used and **either** a Base Style, **or** the ingredients, specs, or target character of the beer.

Vital Statistics: Variable by base style.

Commercial Examples: Boulevard Love Child, Jester King Le Petit Prince, Jolly Pumpkin Oro de Calabaza, Lost Abbey Ghosts in the Forest, New Belgium Le Terroir, Russian River Temptation

Tags: wild-fermentation, north-america, craft-style, specialty-beer, sour

28C. Wild Specialty Beer

Intended for variations of a Base Style beer from style 28A, 28B, or 28D. These variations may include the addition of one or more Specialty-Type Ingredients; aging in non-traditional wood varieties that impart a significant and identifiable wood character (e.g., Spanish Cedar, Amburana); or aging in barrels previously containing another alcohol (e.g., spirits, wine, cider).

Overall Impression: An American Wild Ale with fruit, herbs, spices, or other Specialty-Type Ingredients.

Aroma: Variable by base style. The Specialty-Type Ingredients should be evident, as well as the defining characteristics of a wild fermentation per the base style. The best examples will blend the aromatics from the fermentation with the special ingredients, creating an aroma that may be difficult to attribute precisely.

Appearance: Variable by base style, generally showing a color, tint, or hue from any Specialty-Type Ingredient (especially if fruit is used) in both the beer and the head. Clarity can be variable; some haze is not a fault. Head retention is often poor.

Flavor: Variable by base style. The Specialty-Type Ingredients should be evident, as well as the defining characteristics of a wild fermentation per the base style. If fruit was fermented, the sweetness is generally gone so that only the fruit esters

typically remain. Fruit and other Specialty-Type Ingredients can add sourness of their own; if so, the sourness could be prominent, but should not be overwhelming. The acidity and tannin from any fruit or other Specialty-Type Ingredients can both enhance the dryness of the beer, so care must be taken with the balance. The acidity should enhance the perception of any fruit flavor, not detract from it. Wood notes, if present, add flavor but should be balanced.

Mouthfeel: Variable by base style. Generally has a light body, lighter than what might be expected from the base style. Generally moderate to high carbonation; carbonation should balance the base style if one is declared. The presence of tannin from some Specialty-Type ingredients (often fruit or wood) can provide a slight astringency, enhance the body, or make the beer seem drier than it is.

Comments: This style is intended for fruited (and other added Specialty-Type Ingredient) versions of other styles within Category 28, not variations of European wild or sour Classic Styles. Fruited versions of Lambic should be entered in 23F Fruit Lambic. Fruited versions of other sour Classic Styles (e.g., Flanders Red, Oud Bruin, Gose, Berliner Weisse) should be entered in 29A Fruit Beer. Beers with sugars and unfermented fruit added post-fermentation should be entered in 29C Specialty Fruit Beer.

History: Modern American craft beer interpretations of Belgian wild ales, or experimentations inspired by Belgian wild ales.

Characteristic Ingredients: Virtually any style of beer. Any combination of Sacch, Brett, Lacto, Pedio, or other similar fermenters. Can also be a blend of styles. While cherries, raspberries, and peaches are most common, other fruits can be used as well. Vegetables with fruit-like characteristics (e.g., chile, rhubarb, pumpkin) may also be used. Wood or barrel aging is very common, but not required. Wood with unusual or unique flavor characteristics, or wood previously in contact with other types of alcohol is allowable.

Style Comparison: Like a fruit, herb, spice, or wood beer, but sour or funky.

Entry Instructions: Entrant **must** specify any Specialty-Type Ingredient (e.g., fruit, spice, herb, or wood) used. Entrant **must** specify **either** a description of the beer, identifying yeast or bacteria used and either a Base Style, **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: Variable by base style.

Commercial Examples: Cascade Bourbonic Plague, Jester King Atrial Rubicite, New Belgium Dominga Mimosa Sour, New Glarus Wisconsin Belgian Red, Russian River Supplication, The Lost Abbey Cuvee de Tomme

Tags: wild-fermentation, north-america, craft-style, specialty-beer, sour, fruit

28D. Straight Sour Beer

Intended for beers fermented with Sacch and Lacto, with or without oak aging, produced using any technique (e.g., traditional co-fermentation, quick kettle souring).

Overall Impression: A pale, refreshing, sour beer with a clean lactic sourness. A gentle, pale malt flavor supports the lemony sourness with moderate fruity esters.

Aroma: A sharply sour character is dominant (moderately-high to high). Can have up to a moderately fruity character (often peach, apricot, lemon, or tart apple). No hop aroma. Pale

malt dominates, usually biscuity or crackery. Clean fermentation.

Appearance: Very pale in color. Clarity ranges from clear to somewhat hazy. Large, dense, white head with poor retention. Effervescent.

Flavor: Clean lactic sourness dominates and can be quite strong. Some complementary, bready, biscuit, crackery, or grainy flavor is generally noticeable. Hop bitterness is undetectable. Never vinegary or biting acidic. Pale fruit character can be moderate including a citrusy-lemony or tart apple fruitiness may be detected. Finish is off-dry to dry. Balance dominated by sourness, but some malt and estery fruit flavor should be present. No hop flavor. Clean.

Mouthfeel: Light body. Moderate to high carbonation. Never hot, although higher gravity examples can have a warming alcohol character. Crisp acidity.

Comments: A stronger version of a Berliner Weisse-type beer with less restrictive grist, and no Brett. This beer style is typically are used as a base for modern beers that are heavily flavored with fruit, spices, sugars, etc. – those should be entered in 28C Wild Specialty Beer.

History: German brewing scientist, Otto Francke, developed what was to become known as the *Francke acidification process* which allowed the traditional mixed-culture Berliner

Weiss methods to be sped up and more consistent; this is also known as *kettle souring*. Many modern commercial sour beer examples use this method for rapid production, and as an alternative to complex barrel production.

Characteristic Ingredients: Most or all of the grist is pale, Pils, or wheat malt in any combination. Lightly-kilned malts for more malt depth may be employed. Carapils-type malts can be used for body. Pale sugars can be used to increase gravity without body. No lactose or maltodextrin. Maybe be produced by kettle souring, co-fermentation culture (yeast and LAB), or using specialty yeast that produce lactic acid. No Brett.

Style Comparison: Lower gravity examples can be very much like a Brett-free Berliner Weisse. Compared to a Lambic, is generally not as acidic and has a clean lactic sourness with restrained to below sensory threshold funk. Higher in alcohol content than both.

Vital Statistics:
IBUs: 3 – 8
SRM: 2 – 3

OG: 1.048 – 1.065
FG: 1.006 – 1.013
ABV: 4.5 – 7.0%

Commercial Examples: Rarely found, as this style is typically the base for other Specialty-Type Beers.

Tags: pale-color, top-fermented, sour

29. FRUIT BEER

The Fruit Beer category is for beer made with any fruit or combination of fruit under the definitions of this category. The **culinary, not botanical**, definition of fruit is used here – fleshy, seed-associated structures of plants that are sweet or sour, and edible in the raw state. Examples include pome fruit (apple, pear, quince), stone fruit (cherry, plum, peach, apricot, mango, etc.), berries (any fruit with the word ‘berry’ in it), currants, citrus fruit, dried fruit (dates, prunes, raisins, etc.), tropical fruit (banana, pineapple, mango, guava, passionfruit, papaya, etc.), figs, pomegranate, prickly pear, and so on. It does not mean spices, herbs, or vegetables as defined in Category 30 – especially botanical fruit treated as culinary vegetables. Basically, if you have to justify a fruit using the word “technically” as part of the description, then that’s not what we mean.

See the Introduction to Specialty-Type Beer section for additional comments, particularly on evaluating the balance of added ingredients with the base beer.

29A. Fruit Beer

Overall Impression: A pleasant integration of fruit with beer, but still recognizable as beer. The fruit character should be evident but in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Varies by base style. The fruit character should be noticeable in the aroma; however, some fruit (e.g., raspberries, cherries) have stronger aromas and are more distinctive than others (e.g., blueberries, strawberries) – allow for a range of fruit character and intensities from subtle to aggressive. Hop aroma may be lower than in the base style to better show the fruit character. The fruit should add an extra complexity, but not be so prominent as to unbalance the resulting presentation.

Appearance: Varies by base style and special ingredients. Lighter-colored beer should show distinctive ingredient colors, including in the head. The color of fruit in beer is often lighter than the flesh of the fruit itself and may take on slightly different shades. Variable clarity, although haze is generally undesirable. Some ingredients may impact head retention.

Flavor: Varies by base style. As with aroma, distinctive fruit flavors should be noticeable, and may range in intensity from subtle to aggressive, but the fruit character should not be so artificial or inappropriately overpowering as to suggest a ‘fruit juice drink.’ Bitterness, hop and malt flavors, alcohol content, and fermentation byproducts, such as esters, should be appropriate for the base style, but be harmonious and balanced with the distinctive fruit flavors present.

Fruit generally adds flavor not sweetness, since fruit sugars usually fully ferment, thus lightening the flavor and drying out the finish. However, residual sweetness is not necessarily a negative characteristic unless it has a raw, unfermented quality. Some fruit may add sourness, bitterness, and tannins, which must be balanced in the resulting flavor profile.

Mouthfeel: Varies by base style. Fruit often decreases body, and makes the beer seem lighter on the palate. Some smaller and darker fruits may add a tannic depth, but this astringency should not overwhelm the base beer.

Comments: The description of the beer is critical for evaluation; judges should think more about the declared concept than trying to detect each individual ingredient. Balance, drinkability, and execution of the theme are the most important deciding factors.

The fruit should complement the original style and not overwhelm it. Base style attributes will be different after the addition of fruit; do not expect the beer to taste identical to the unadulterated base style.

Fruit Beers based on a Classic Style should be entered in this style, except Lambic – there is a special style for Fruit Lambic (23F). Fruited sour or mixed fermentation beers without a Classic Style base should be entered in the 28C Wild Specialty

Beer. Fruited versions of sour Classic Style beers (e.g., Flanders Red, Oud Bruin, Gose, Berliner Weisse) should be entered in 29A Fruit Beer. Fruit-based versions of Classic Styles where spices are an inherent part of the Classic Style’s definition (e.g., Witbier, Gose) do not count as a Spice Beer for entering purposes.

Entry Instructions: The entrant **must** specify the type(s) of fruit used. Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer, but the fruit will often be reflected in the color.

Commercial Examples: 21st Amendment Watermelon Wheat, Anderson Valley Blood Orange Gose, Avery Liliko’i Kepolo, Ballast Point Grapefruit Sculpin, Bell’s Cherry Stout, Founders Rübæus

Tags: specialty-beer, fruit

29B. Fruit and Spice Beer

Use the definitions of Fruit in the preamble to Category 29 and Spice in the preamble to Category 30; any combination of ingredients valid in Styles 29A and 30A are allowable in this category. For this style, the word ‘spice’ means ‘any SHV’.

Overall Impression: A tasteful union of fruit, spice, and beer, but still recognizable as beer. The fruit and spice character should each be evident but in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Varies by base style. The fruit and spice character should be noticeable in the aroma; however, note that some fruit and spices (e.g., raspberries, cherries, cinnamon, ginger) have stronger aromas and are more distinctive than others (e.g., blueberries, strawberries) – allow for a range of fruit and spice character and intensity from subtle to aggressive. Hop aroma may be lower than in the base style to better show the specialty character. The specialty ingredients should add an extra complexity, but not be so prominent as to unbalance the resulting presentation.

Appearance: Varies by base style and special ingredients. Lighter-colored beer should show distinctive ingredient colors, including in the head. The color of fruit in beer is often lighter than the flesh of the fruit itself and may take on slightly different shades. Variable clarity, although haze is generally undesirable. Some ingredients may impact head retention.

Flavor: Varies by base style. As with aroma, distinctive fruit and spice flavors should be noticeable, and may range in intensity from subtle to aggressive. The fruit character should not be so artificial or inappropriately overpowering as to suggest a spiced fruit juice drink. Hop bitterness, flavor, malt

flavors, alcohol content, and fermentation byproducts, such as esters, should be appropriate to the base style, but be harmonious and balanced with the distinctive fruit and spice flavors present.

Fruit generally add flavor not sweetness, since fruit sugars usually fully ferment, thus lightening the flavor and drying out the finish. However, residual sweetness is not necessarily a negative characteristic unless it has a raw, unfermented quality. Some ingredients may add sourness, bitterness, and tannins, which must be balanced in the resulting flavor profile.

Mouthfeel: Varies by base style. Fruit often decreases body, and makes the beer seem lighter on the palate. Some smaller and darker fruits may add a tannic depth, but this astringency should not overwhelm the base beer. SHVs may increase or decrease body. Some SHVs may add a bit of astringency, although a “raw” spice character is undesirable.

Comments: The description of the beer is critical for evaluation; judges should think more about the declared concept than trying to detect each individual ingredient. Balance, drinkability, and execution of the theme are the most important deciding factors.

The specialty ingredients should complement the original style and not overwhelm it. Base style attributes will be different after the addition of fruit and spices; do not expect the beer to taste identical to the unadulterated base style.

Entry Instructions: The entrant **must** specify the type of fruit, and the type of SHV used; individual SHV ingredients do not need to be specified if a well-known blend of spices is used (e.g., apple pie spice). Entrant **must** specify a description of the beer, **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer, but the fruit will often be reflected in the color.

Commercial Examples: Cigar City Margarita Gose, Firestone Walker Chocolate Cherry Stout, Golden Road Spicy Mango Cart, Kona Island Colada Cream Ale, New Glarus Blueberry Cocoa Stout, Sun King Orange Vanilla Sunlight

Tags: specialty-beer, fruit, spice

29C. Specialty Fruit Beer

A Specialty Fruit Beer is a Fruit Beer with some additional ingredients, such as fermentable sugars (e.g., honey, brown sugar, invert sugar), sweeteners (e.g., lactose), adjuncts, alternative grains, or other special ingredients added, or some additional process applied. A Specialty Fruit Beer can use any style within the Fruit Beer category as a base style (currently, 29A, 29B, or 29D).

Overall Impression: A appealing combination of fruit, sugar, and beer, but still recognizable as a beer. The fruit and sugar character should both be evident but in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Same as Fruit Beer, except that some additional fermentables (e.g., honey, molasses) may add an aroma component. Whatever additional aroma component is present should be in balance with the fruit and the beer components, and be a pleasant combination.

Appearance: Same as Fruit Beer.

Flavor: Same as Fruit Beer, except that some additional fermentables (e.g., honey, molasses) may add a flavor component. Whatever additional flavor component is present should be in balance with the fruit and the beer components,

and be a pleasant combination. Added sugars should not have a raw, unfermented flavor. Some added sugars will have unfermentable elements that may provide a fuller and sweeter finish; fully fermentable sugars may thin out the finish.

Mouthfeel: Same as Fruit Beer, although depending on the type of sugar added, could increase or decrease the body.

Comments: If the additional fermentables or processes do not add a distinguishable character to the beer, enter it as one of the other (non-Specialty) Fruit Beer styles and omit a description of the extra ingredients or processes.

Entry Instructions: The entrant **must** specify the type of fruit used. The entrant **must** specify the type of additional ingredient (per the introduction) or special process employed. Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer, but the fruit will often be reflected in the color.

Commercial Examples: The Bruery Goses are Red, New Planet Raspberry Ale, Tired Hands Strawberry Milkshake IPA, WeldWerks Piña Colada IPA

Tags: specialty-beer, fruit

29D. Grape Ale

Originally a local Italian style that subsequently inspired brewers in grape-growing regions worldwide to produce versions showcasing local varieties. See X3 Italian Grape Ale for the local version.

Overall Impression: Combines the profile of a sparkling wine and a relatively neutral base beer allowing the aromatic qualities of the grape to blend pleasantly with hop and yeast aromatics. Can be in a range from refreshing to complex.

Aroma: Aromatic characteristics of the varietal grape are noticeable but should not dominate. The grape character should meld well with the underlying base malt character. While hop aroma is usually restrained, it can range from medium-low to entirely absent. Fermentation is usually quite clean but can have delicate spice and fruity esters. Banana, bubblegum, and the like are considered faults.

Appearance: Color can range from pale golden to ruby but those using red grapes tend towards burgundy. These darker colors may also come from using cooked or concentrated grape products, never from specialty dark grains. White to reddish head with generally a medium-low retention. Clarity is generally good. Never hazy.

Flavor: As with the aroma, grape character may range from subtle to medium-high intensity, and be most prominent. Fruit flavors (stone, tropical, berries, etc.) as appropriate for the variety of grape. Darker red grapes can contribute more rustic flavors (e.g., earthy, tobacco, leather). The malt character is supportive, not robust and usually of the pale, lightly kilned varieties. Very low levels of pale crystal malts are allowed but roasted or strong chocolate character is always inappropriate. Bitterness is generally low and hop flavors can be low to non-existent. Mild tart notes, due to variety and amount of grape used, is common and may help to improve the digestibility but should not near ‘sour’ threshold. Complementary oak is optional but a funky Brett character should not be present. Clean fermentation.

Mouthfeel: Medium-high to high carbonation improves the perception of aroma. Body is generally from low to medium

and some acidity can contribute to increased perception of dryness. Finish is exceedingly dry and crisp. Strong examples may show some warming.

Comments: Strengths can be as low as 4.5% or as high as 12.5%, but most commonly in the range listed. Perception of color varies widely based on tint of added fruit.

History: Initially brewed at Birrificio Montegioco and Birrificio Barley in 2006-2007. Became more popular after being published in the 2015 Guidelines as Italian Grape Ale (IGA), and inspired many local variations in other countries.

Characteristic Ingredients: Pils or pale base malt, limited pale crystal or wheat malts. Grape must (red or white varieties, typically fresh must) is usually 15 – 20% of the total grist, but can exceed 40%. The must is fermented with the beer, not a blending of wine and beer. Fruity-spicy yeast are most common but neutral varieties can be used. Hops should be selected to complement the overall profile. This beer is *not* dry-hopped.

Oak is allowable, but not required, and it should not be overpowering, or at levels stronger than found in wine.

Style Comparison: Similar base as several Belgian styles, like Belgian Blonde, Saison, and Belgian Single, but with grapes. Higher strength examples are similar to Belgian Tripel or Belgian Golden Strong Ale, but with grapes. Not funky like Fruit Lambic.

Entry Instructions: The entrant **must** specify the type of grape used. The entrant **may** provide additional information about the base style or characteristic ingredients.

Vital Statistics:

OG:	1.059 – 1.075
IBUs:	10 – 30
SRM:	4 – 8
FG:	1.004 – 1.013
ABV:	6.0 – 8.5%

Commercial Examples: Montegioco Open Mind, Birrificio del Forte Il Tralcio, Luppolaço Mons Rubus, Firestone Walker Feral Vinifera, pFriem Family Brewers Druif, 4 Árvores Abbondanza

Tags: specialty-beer, fruit

30. SPICED BEER

We use the common or culinary definitions of spices, herbs, and vegetables, not botanical or scientific ones. In general, spices are the dried seeds, seed pods, fruit, roots, bark, etc. of plants used for flavoring food. Herbs are leafy plants or parts of plants (leaves, flowers, petals, stalks) used for flavoring food. Vegetables are savory or less sweet edible plant products, used primarily for cooking or sometimes eating raw. Vegetables can include some botanical fruit. This category explicitly includes all culinary spices, herbs, and vegetables, as well as nuts (or anything with ‘nut’ in the name, including coconut), chile peppers, coffee, chocolate, spruce tips, rose hips, hibiscus, fruit peels/zest (but not juice), rhubarb, and the like. It does not include culinary fruit or grains. Flavorful fermentable sugars and syrups (e.g., agave nectar, maple syrup, molasses, sorghum, treacle, honey) or sweeteners (e.g., lactose) can be included only in combination with other allowable ingredients, and should not have a dominant character. Any combination of allowable ingredients may also be entered.

See Category 29 for a definition and examples of fruit. See the Introduction to Specialty-Type Beer section for additional comments, particularly on evaluating the balance of added ingredients with the base beer.

30A. Spice, Herb, or Vegetable Beer

Often called *Spice Beer*, regardless of whether spices, herbs, or vegetables are used.

Overall Impression: An appealing fusion of spices, herbs, or vegetables (SHVs) and beer, but still recognizable as beer. The SHV character should be evident but in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Varies by base style. The SHV character should be noticeable in the aroma; however, some SHVs (e.g., ginger, cinnamon, rosemary) have stronger aromas and are more distinctive than others (e.g., most vegetables) – allow for a range of SHV character and intensity from subtle to aggressive. Hop aroma may be lower than in the base style to better show the SHV character. The SHVs should add an extra complexity, but not be so prominent as to unbalance the resulting presentation.

Appearance: Varies by base style and special ingredients. Lighter-colored beer may show distinctive ingredient colors, including in the head. Variable clarity, although haze is generally undesirable. Some ingredients may impact head retention.

Flavor: Varies by base style. As with aroma, distinctive SHV flavors should be noticeable, and may range in intensity from subtle to aggressive. Some SHVs are inherently bitter and may result in a beer more bitter than the declared base style. Bitterness, hop and malt flavors, alcohol content, and fermentation byproducts, such as esters, should be appropriate for the base style, but be harmonious and balanced with the distinctive SHV flavors present.

Mouthfeel: Varies by base style. SHVs may increase or decrease body. Some SHVs may add a bit of astringency, although a “raw” spice character is undesirable.

Comments: The description of the beer is critical for evaluation; judges should think more about the declared concept than trying to detect each individual ingredient. Balance, drinkability, and execution of the theme are the most important deciding factors.

The SHVs should complement the original style and not overwhelm it. Base style attributes will be different after the addition of SHVs; do not expect the beer to taste identical to the unadulterated base style.

Entry Instructions: The entrant **must** specify the type of spices, herbs, or vegetables used, but individual ingredients do not need to be specified if a well-known spice blend is used (e.g., apple pie spice, curry powder, chili powder). Entrant **must** specify a description of the beer, identifying either a Base Style **or** the ingredients, specs, or target character of the

beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer.

Commercial Examples: Alesmith Speedway Stout, Elysian Avatar Jasmine IPA, Founders Breakfast Stout, Rogue Yellow Snow Pilsner, Traquair Jacobite Ale, Young’s Double Chocolate Stout

Tags: specialty-beer, spice

30B. Autumn Seasonal Beer

Autumn Seasonal Beers are beers that suggest cool weather and the autumn harvest season, and may include pumpkins, gourds, or other squashes, and associated spices.

Overall Impression: A malty, spiced beer that often has a moderately rich body and slightly warming finish suggesting a good accompaniment for the cool fall season, and often evocative of harvest or Thanksgiving traditions.

Aroma: Malty, spicy, and balanced. A wide range is possible, as long as it evokes the harvest theme. The declared ingredients and concept set the expectation. Hops are often subtle. Alcohol is often present, but smooth and supportive. The components should be well-integrated, and create a coherent presentation. See Flavor section for spice, malt, sugar, and vegetable character.

Appearance: Medium amber to coppery-brown; lighter versions are more common. Clear, if not opaque. Well-formed, persistent, off-white to tan head. Some versions with squashes will take on an unusual hue for beer, with orange-like hints.

Flavor: Malty, spicy, and balanced. Allow for brewer creativity in meeting the theme objective. Warming or sweet spices common. Rich, toasty malty flavors are common, and may include caramel, toasted bread or pie crust, biscuit, or nut flavors. May include distinctive sugar flavors, like molasses, honey, or brown sugar. Flavor derived from squash-based vegetables are often elusive, often only providing a richer sweetness.

The special ingredients should be supportive and balanced, not overshadowing the base beer. Bitterness and hop flavor are usually restrained to not interfere with the special character. Usually finishes somewhat full and satisfying, occasionally with a light alcohol flavor. Roasted malt characteristics are typically absent.

Mouthfeel: Body is usually medium to full, and may be chewy. Moderately low to moderately high carbonation. Age character allowable. Warming alcohol allowable.

Comments: Using the sensory profile of products that suggest the harvest season, like pumpkin pie, apple pie, or candied

yams, balanced with a supportive, often malty base beer. The description of the beer is critical for evaluation; judges should think more about the declared concept than trying to detect each individual ingredient. Balance, drinkability, and execution of the theme are the most important deciding factors.

Characteristic Ingredients: Spices are required, and often include those evocative of the fall, harvest, or Thanksgiving season (e.g., allspice, nutmeg, cinnamon, cloves, ginger) but any combination is possible and creativity is encouraged. Flavorful adjuncts are common (e.g., molasses, invert sugar, brown sugar, honey, maple syrup). Squash-type or gourd-type vegetables (most frequently pumpkin) are often used.

Entry Instructions: The entrant **must** specify the type of spices, herbs, or vegetables used; individual ingredients do not need to be specified if a well-known blend of spices is used (e.g., pumpkin pie spice). Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer. ABV is generally above 5%, and most examples are somewhat amber-copper in color.

Commercial Examples: Dogfish Head Punkin Ale, Elysian Punkuccino, Rogue Pumpkin Patch Ale, Schlafly Pumpkin Ale, UFO Pumpkin, Weyerbacher Imperial Pumpkin

Tags: specialty-beer, spice

30C. Winter Seasonal Beer

Winter Seasonal Beers are beers that suggest cold weather and the Christmas holiday season, and may include holiday spices, specialty sugars, and other products that are reminiscent of the festive season.

Overall Impression: A stronger, darker, spiced beer that often has a rich body and warming finish suggesting a good accompaniment for the cold winter season.

Aroma: Malty, spicy, fruity, and balanced. A wide range is possible, as long as it evokes the holiday theme. The declared ingredients and concept set the expectation. Fruit is often dark or dried in character. Hops are often subtle. Alcohol is often present, but smooth and supportive. Malty and sugary aromas tend to be greater in the balance, and support the spices. The components should be well-integrated, and create a coherent presentation. See Flavor section for spice, malt, sugar, and fruit character.

Appearance: Medium amber to very dark brown; darker versions are more common. Clear, if not opaque. Usually clear, although darker versions may be virtually opaque. Well-formed, persistent, off-white to tan head.

Flavor: Malty, spicy, fruity, and balanced. Allow for brewer creativity in meeting the theme objective. Warming or sweet spices common. Rich, sweet malty flavors are common, and may include caramel, toast, nutty, or chocolate flavors. May include dried fruit or dried fruit peel flavors such as raisin, plum, fig, cherry, orange peel, or lemon peel. May include distinctive sugar flavors, like molasses, honey, or brown sugar. The special ingredients should be supportive and balanced, not overshadowing the base beer. Bitterness and hop flavor are usually restrained to not interfere with special character. Usually finishes rather full and satisfying, often with a light alcohol flavor. Roasted malt characteristics are rare, and not usually stronger than chocolate.

Mouthfeel: Body is usually medium to full, often with a malty chewiness. Moderately low to moderately high carbonation. Age character allowable. Warming alcohol allowable.

Comments: Using the sensory profile of products that suggest the holiday season, such as Christmas cookies, gingerbread, English-type Christmas pudding, rum cakes, eggnog, evergreen trees, potpourri, or mulling spices, balanced with a supportive, often malty, warming, and darker base beer. The description of the beer is critical for evaluation; judges should think more about the declared concept than trying to detect each individual ingredient. Balance, drinkability, and execution of the theme are the most important deciding factors.

History: The winter holiday season is a traditional time when old friends get together, where beer of a somewhat higher alcohol content and richness is served. Many breweries offer seasonal products that may be darker, stronger, spiced, or otherwise more characterful than their year-round beers. Spiced versions are an American or Belgian tradition, since English or German breweries traditionally do not use spices in their beer. Many American craft examples were inspired by Anchor Our Special Ale, first produced in 1975.

Characteristic Ingredients: Spices are required, and often include those evocative of the Christmas season (e.g., allspice, nutmeg, cinnamon, cloves, ginger) but any combination is possible and creativity is encouraged. Fruit peel (e.g., oranges, lemon) may be used, as may subtle additions of other fruits (often dried or dark fruit). Flavorful adjuncts are often used (e.g., molasses, treacle, invert sugar, brown sugar, honey, maple syrup). Usually ales, although strong dark lagers exist.

Entry Instructions: The entrant **must** specify the type of spices, sugars, fruits, or additional fermentables used; individual ingredients do not need to be specified if a well-known blend of spices is used (e.g., mulling spice). Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer. ABV is generally above 6%, and most examples are somewhat dark in color.

Commercial Examples: Anchor Christmas Ale, Great Lakes Christmas Ale, Harpoon Winter Warmer, Rogue Santa's Private Reserve, Schlafly Christmas Ale, Troeg's The Mad Elf

Tags: specialty-beer, spice

30D. Specialty Spice Beer

A Specialty Spice Beer is a 30A Spice, Herb, or Vegetable (SHV) Beer with some additional ingredients, such as fermentable sugars (e.g., honey, brown sugar, invert sugar, maple syrup), sweeteners (e.g., lactose), adjuncts, alternative grains, or other special ingredients added, or some additional process applied. 30B Autumn and 30C Winter Seasonal Beers already allow additional ingredients, and should not be used as a base in this style.

Overall Impression: An appealing combination of spices, herbs, or vegetables (SHVs), sugars, and beer, but still recognizable as beer. The SHV and sugar character should both be evident but in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Same as SHV Beer, except that some additional fermentables (e.g., honey, molasses) may add an aroma component. Whatever additional aroma component is present

should be in balance with the SHV and the beer components, and be a pleasant combination.

Appearance: Same as Spice, Herb, or Vegetable Beer.

Flavor: Same as SHV Beer, except that some additional fermentables (e.g., honey, molasses) may add a flavor component. Whatever additional flavor component is present should be in balance with the SHV and the beer components, and be a pleasant combination. Added sugars should not have a raw, unfermented flavor. Some added sugars will have unfermentable elements that may provide a fuller and sweeter finish; fully fermentable sugars may thin out the finish.

Mouthfeel: Same as SHV Beer, although depending on the type of sugar added, could increase or decrease the body.

Comments: If the additional fermentables or processes do not add a distinguishable character to the beer, enter it as one of the other (non-Specialty) Spiced Beer styles and omit a description of the extra ingredients or processes.

Entry Instructions: The entrant **must** specify the type of SHVs used, but individual ingredients do not need to be specified if a well-known spice blend is used (e.g., apple pie spice, curry powder, chili powder). The entrant **must** specify the type of additional ingredient (per the introduction) or special process employed. Entrant **must** specify a description of the beer, identifying either a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer.

Commercial Examples: New Belgium Honey Orange Tripel, Westbrook It's Tiki Time

Tags: specialty-beer, spice

31. ALTERNATIVE FERMENTABLES BEER

This category contains Specialty-Type Beers using either grain or sugar to add a distinctive character. See the Introduction to Specialty-Type Beer section for additional comments, particularly on evaluating the balance of added ingredients to the base beer.

31A. Alternative Grain Beer

*An **Alternative Grain Beer** is a standard beer (Classic Style or not) with additional or non-standard brewing grains (e.g., rye, oats, buckwheat, spelt, millet, sorghum, rice) added or used exclusively. Gluten-free (GF) beers made from completely gluten-free ingredients may be entered here, while GF beers using process-based gluten removal should be entered in their respective base style categories.*

Overall Impression: A base beer enhanced by or featuring the character of additional grains. The specific character depends greatly on the added grains.

Aroma: Same as base beer style. The added grain will lend a particular character, although with some grains the beer will simply seem a bit more grainy or nutty, and some may have a relatively neutral character.

Appearance: Same as base beer style, although some additional haze may be noticeable.

Flavor: Same as base beer style. The additional grain should be noticeable in flavor, although it may not be necessarily identifiable. Some grains add an additional grainy, bready, or nutty flavor, while others simply enhance the flavor of the base beer. Some grains add a dryness to the finish.

Mouthfeel: Same as the base beer, although many additional grains (e.g., oats, rye) increase body and viscosity, while some (e.g., GF grains) create a thinner beer.

Comments: The additional grain should be apparent somewhere in the sensory profile. If the alternative grain does not provide a noticeable distinguishable character to the beer, enter it as the base style. This style should not be used for styles where the alternative grain is fundamental to the style definition (e.g., Rye IPA, Oatmeal Stout, Rice- or Corn-based International Lager). Note that sake is not beer, and is not intended for this category.

Entry Instructions: The entrant **must** specify the type of alternative grain used. Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer.

Commercial Examples: Blue/Point Rastafarye Ale, Green's India Pale Ale, Lakefront New Grist, New Planet Pale Ale, Rogue Morimoto Soba Ale, Voodoo Swimming Jeans

Tags: specialty-beer

31B. Alternative Sugar Beer

*An **Alternative Sugar Beer** is a standard beer (Classic Style or not) with added sweeteners, including fermentable sugars (e.g., honey, brown sugar, invert sugar, molasses, treacle, maple syrup, sorghum), unfermentable sugars (e.g., lactose), sugar alcohols (e.g., sorbitol), and any other sweetener (natural or artificial) that affects the flavor profile. The beers may or may not have any residual sweetness; it depends on the type of sugar, but flavor contributions are expected.*

Overall Impression: A tasteful integration of sugar and beer, but still recognizable as beer. The sugar character should both be evident and in balance with the beer, not so forward as to suggest an artificial product.

Aroma: Same as the base beer, except that some additional fermentables (e.g., honey, molasses) may add an aroma, which should be a pleasant, balanced combination with the beer.

Appearance: Same as the base beer, although some sugars will bring additional, usually darker, colors.

Flavor: Same as the base beer, except that some additional fermentables (e.g., honey, molasses) may add a flavor, which should be a pleasant, balanced combination with the beer. Added sugars should not have a raw, unfermented flavor. Some unfermentable sugars provide a fuller finish, while fully fermentable sugars can thin out the finish.

Mouthfeel: Same as the base beer, although depending on the type of sugar added, could increase or decrease the body.

Comments: The additional sugar should be apparent somewhere in the sensory profile. If the sugars do not add a distinguishable character to the beer, enter it in the base style category. A honey-based beer should not have so much honey that it is perceived more like a mead with beer (i.e., a braggot) than a honey beer. This style should not be used for styles where the alternative sugar is fundamental to the style definition, or where a small amount of neutral-flavored sugar is used simply to increase gravity, increase attenuation, or lighten flavor or body; those beers should be entered as the normal base style.

Entry Instructions: The entrant **must** specify the type of sugar used. Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the underlying base beer.

Commercial Examples: Bell's Hopslam, Cervejaria Colorado Appia, Fifth Hammer Break of Jaw'n, Groundswell Piloncillo, Long Trail Harvest, New Glarus Cabin Fever

Tags: specialty-beer

32. SMOKED BEER

This category contains Specialty-Type Beers that have a smoke character.

32A. Classic Style Smoked Beer

Intended for smoked versions of Classic Style beers, except if the Classic Style beer has smoke as an inherent part of its definition (of course, that beer should be entered in its base style, such as Rauchbier).

Overall Impression: A well-balanced fusion of the malt and hops of the base beer style with a pleasant and agreeable smoke character.

Aroma: A pleasant balance between the expected aroma of the base beer and smoked malt. The smoke character ranges from low to assertive, and may show varietal wood smoke character (e.g., alder, oak, beechwood). The balance between the smoke and beer can vary – they do not need to be equal in intensity. However, the resulting mix should be appealing. Sharp, phenolic, harsh, rubbery, or burnt smoke-derived aromatics are inappropriate.

Appearance: Variable. The appearance should reflect the base beer style, although the color is often a bit darker than expected for the plain base style.

Flavor: Similar to the aroma, with a balance between the base beer and low to assertive smoked malt. Varietal woods can produce different flavor profiles. The balance between smoke and beer can vary, but the resulting blend should be enjoyable. Smoke can add some additional dryness to the finish. Harsh, bitter, burnt, charred, rubbery, sulfury, medicinal, or phenolic smoke-derived flavors are inappropriate.

Mouthfeel: Varies with the base beer style. Significant astringent, phenolic, smoke-derived harshness is a fault.

Comments: Use this style for beers other than Bamberg-style *Rauchbier* (i.e., beechwood-smoked *Märzen*), which has its own style. Judges should evaluate these beers mostly on the overall balance, and how well the smoke character enhances the base beer.

History: The process of using smoked malts has been adapted by craft brewers to many styles. German brewers have traditionally used smoked malts in Bock, Doppelbock, Weissbier, Munich Dunkel, Schwarzbier, Munich Helles, Pils, and other specialty styles.

Characteristic Ingredients: Different materials used to smoke malt result in unique flavor and aroma characteristics. Beechwood, or other hardwood (e.g., oak, maple, mesquite, alder, pecan, apple, cherry, other fruitwoods) smoked malts may be used. These may be reminiscent of certain smoked foods (e.g., hickory with ribs, maple with bacon or sausage, and alder with salmon). Evergreen wood should never be used since it adds a medicinal, piney flavor to the malt. Noticeable peat-smoked malt is universally undesirable due to its sharp, piercing phenols and dirt-like earthiness. The remaining ingredients vary with the base style. If smoked malts are combined with other unusual ingredients (e.g., fruits, vegetables, spices, honey) in noticeable quantities, the resulting beer should be entered in the 32B Specialty Smoked Beer.

Entry Instructions: The entrant **must** specify a Base Style. The entrant **must** specify the type of wood or smoke **if** a varietal smoke character is noticeable.

Vital Statistics: Varies with the base beer style.

Commercial Examples: Alaskan Smoked Porter, Schlenkerla Oak Smoke Doppelbock, Schlenkerla Rauchbier Weizen, Schlenkerla Rauchbier Ur-Bock, O’Fallon Smoked Porter, Spezial Rauchbier Lagerbier

Tags: specialty-beer, smoke

32B. Specialty Smoked Beer

A Specialty Smoked Beer is either a smoked beer based on something other than a Classic Style (a Specialty-Type style, or a broad style family such as Porter rather than a specific style), OR any type of smoked beer with additional specialty ingredients (fruits, vegetables, spices) or processes employed that transform the beer into something more unique.

Overall Impression: A well-balanced fusion of the malt and hops of the base specialty beer style with a pleasant and agreeable smoke character.

Aroma: A pleasant balance between the expected aroma of the base beer, smoked malt, and any specialty ingredients. The smoke character ranges from low to assertive, and may show varietal wood smoke character (e.g., alder, oak, beechwood). The balance between the smoke, the beer, and any specialty ingredients can vary – they do not need to be equal in intensity. However, the resulting mix should be appealing. Sharp, phenolic, harsh, rubbery, or burnt smoke-derived aromatics are inappropriate.

Appearance: Variable. The appearance should reflect the base beer style, although the color is often a bit darker than expected for the plain base style. The use of certain fruits and spices may affect the color and hue of the beer as well.

Flavor: Similar to the aroma, with a balance between the base beer, any specialty ingredients, and low to assertive smoked malt. Varietal woods can produce different flavor profiles. The balance between smoke, beer, and any specialty ingredients can vary, but the resulting blend should be enjoyable. Smoke can add some additional dryness to the finish. Harsh, bitter, burnt, charred, rubbery, sulfury, medicinal, or phenolic smoke-derived flavors are inappropriate.

Mouthfeel: Varies with the base beer style. Significant astringent, phenolic, smoke-derived harshness is a fault.

Comments: Judges should evaluate these beers mostly on the overall balance, and how well the smoke character enhances the base beer and any specialty ingredients.

Characteristic Ingredients: Same as 32A Classic Style Smoked Beer with the possible addition of specialty ingredients (e.g., fruits, spices, vegetables, honey) in noticeable quantities.

Entry Instructions: The entrant **must** specify the type of wood or smoke **if** a varietal smoke character is noticeable. The entrant **must** specify the additional ingredients or processes that make this a specialty smoked beer. Entrant **must** specify a description of the beer, identifying either a base style or the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics: Varies with the base beer style.

Commercial Examples: Fat Head’s Up in Smoke, Ommegang Bourbon Barrel Vanilla Smoked Porter

Tags: specialty-beer, smoke

33. WOOD BEER

This category contains Specialty-Type Beers with a wood-aged or barrel character, with or without added alcohol character.

33A. Wood-Aged Beer

This style is intended for beer aged in wood without added alcohol character from previous use of the barrel. Bourbon-barrel or other beers with an added alcohol character should be entered as 33B Specialty Wood-Aged Beer.

Overall Impression: A pleasant enhancement of the base beer style with the characteristics from aging in contact with wood. The best examples will be smooth, flavorful, well-balanced, and well-aged.

Aroma: Varies with base style. A low to moderate woody aroma is usually present; some varieties may have a stronger, or distinctive character. Fresh wood can occasionally impart raw, fresh-cut wood smell, although this character should never be too strong. If the wood is toasted or charred, there may be low to moderate vanilla, caramel, toffee, toast, or cocoa character present.

Appearance: Varies with base style. Often darker than the unadulterated base beer style, particularly if toasted or charred barrels are used.

Flavor: Varies with base style. Wood usually contributes a woody flavor, and possibly a distinctive varietal character. New wood may add a raw, fresh-cut wood impression. Toasted or charred wood can add vanilla, caramel, butterscotch, toasted bread, toasted nuts, coffee, chocolate, or cocoa, depending on the wood varietal and level of toast or char. Wood-derived flavors should be balanced, supportive, and noticeable, while not overpowering the base beer style.

Mouthfeel: Varies with base style. Tannins from the wood may increase the perception of body, as well as enhancing the dryness of the finish; some astringency from wood tannins is allowable. Tart or acidic characteristics should be low to none, and never distracting.

Comments: Much of the character depends on the type of wood used, and how well it complements and enhances the base style. Age character is allowable, but excessive oxidation or sourness is a fault. Noticeable alcohol is not a fault in stronger base styles.

This category should not be used for base styles where wood-aging is a fundamental requirement for the style (e.g., Flanders Red, Lambic). Beers made using either limited wood aging or products that only provide a subtle background character may be entered in the base beer style categories as long as the wood character isn't prominently featured.

History: A traditional production method that is rarely used by major breweries, and usually only with specialty products. More popular with modern craft breweries looking for new, distinctive products. Oak cask and barrels are traditional, although other woods are becoming more popular.

Characteristic Ingredients: Varies with base style. Aged in wooden casks or barrels, or using wood-based additives (e.g., chips, staves, spirals, cubes). Fuller-bodied, higher-gravity base styles often are used since they can best stand up to the additional flavors, although experimentation is encouraged.

Entry Instructions: The entrant **must** specify the type of wood used and the toast or char level (if used). If an unusual varietal wood is used, the entrant **must** supply a brief description of the sensory aspects the wood adds to beer. Entrant **must** specify a description of the beer, identifying

either a Base Style **or** the ingredients, specs, or target character of the beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics:

OG: varies with base style, typically above-average

FG: varies with base style

ABV: varies with base style, typically above-average

IBUs: varies with base style

SRM: varies with base style, often darker than the unadulterated base style

Commercial Examples: Bush Prestige, Cigar City Spanish Cedar Jai Alai, Firestone Walker Double Barrel Ale, Midnight Sun Arctic Devil, Petrus Aged Pale, Samuel Smith Yorkshire Stingo

Tags: specialty-beer, wood

33B. Specialty Wood-Aged Beer

This style is intended for beer aged in wood with added alcohol character from previous use of the barrel. Bourbon-barrel or other similar beers should be entered here.

Overall Impression: An elevation of the base beer style with characteristics from aging in contact with wood, including alcoholic products previously in contact with the wood. The best examples will be smooth, flavorful, well-balanced, and well-aged.

Aroma: Varies with base style. A low to moderate woody aroma is usually present; some varieties may have a stronger, or distinctive character. If the wood is toasted or charred, there may be low to moderate vanilla, caramel, toffee, toast, or cocoa character present. Aromatics associated with alcohol (e.g., distilled spirits, wine) previously stored in the wood should be noticeable, but balanced.

Appearance: Varies with base style. Often darker than the unadulterated base beer style, particularly if charred barrels are used. Beers aged in wine barrels or other products with distinctive colors may also impart a color to the finished beer.

Flavor: Varies with base style. Wood usually contributes a woody flavor, and possibly a distinctive varietal character. Toasted or charred wood can add vanilla, caramel, butterscotch, toasted bread, toasted nuts, coffee, chocolate, or cocoa, depending on the wood varietal and level of toast or char. Wood-derived flavors and added alcohol flavors should be balanced, mutually supportive, and noticeable, while not overpowering the base beer style or each other.

Mouthfeel: Varies with base style. Tannins from the wood may increase the perception of body, as well as enhancing the dryness of the finish; some astringency from wood tannins is allowable. Usually exhibits additional alcohol warming, but should not be hot or harsh. Tart or acidic characteristics should be low to none, and never distracting.

History: Same as 33A Wood-Aged Beer.

Comments: Success in this style depends on how well the wood and alcohol character supports and enhances the base beer, and how well integrated they are with the overall flavor profile. Age character is allowable, but excessive oxidation or sourness is a fault.

Special wood-aged wild ales should be entered in the 28C Wild Specialty Beer.

Characteristic Ingredients: Varies with base style. Aged in wooden casks or barrels previously used to store alcohol (e.g., whiskey, bourbon, rum, gin, tequila, port, sherry, Madeira, wine). Fuller-bodied, higher-gravity base styles often are used since they can best stand up to the additional flavors, although experimentation is encouraged.

Entry Instructions: The entrant **must** specify the additional alcohol character, with information about the barrel if relevant to the finished flavor profile. If an unusual wood or ingredient has been used, the entrant **must** supply a brief description of the sensory aspects the ingredients add to the beer. Entrant **must** specify a description of the beer, identifying **either** a Base Style **or** the ingredients, specs, or target character of the

beer. A general description of the special nature of the beer can cover all the required items.

Vital Statistics:

OG: varies with base style, typically above-average

FG: varies with base style

ABV: varies with base style, typically above-average

IBUs: varies with base style

SRM: varies with base style, often darker than the unadulterated base style

Commercial Examples: AleSmith Barrel-Aged Old Numbskull, Founders Kentucky Breakfast Stout, Firestone Walker Parabola, Goose Island Bourbon County Stout, Great Divide Barrel Aged Yeti, The Lost Abbey Angel's Share Ale

Tags: specialty-beer, wood

34. SPECIALTY BEER

While there are many Specialty-Type Beers in these guidelines, the Specialty Beer style category is intended for those beers that do not fit anywhere else. Please check each previous Specialty-Type category before entering a beer in one of these styles.

34A. Commercial Specialty Beer

This style is intended for reproductions or interpretations of specific commercial beers that don't fit within defined styles. Beers entered here do not need to be exact copies. The beer should be judged as to how well it fits the broader style represented by the example beer, not how well it is an exact copy of a specific commercial product. If a Commercial Specialty Beer fits another defined style, do not enter it here.

Overall Impression: Based on declared beer.

Aroma: Based on declared beer.

Appearance: Based on declared beer.

Flavor: Based on declared beer.

Mouthfeel: Based on declared beer.

Comments: Intended as a catch-all location for specific beers that are based on unique commercial examples that don't fit existing styles. Past versions of the Style Guidelines included a Belgian Specialty Ale style; this style fits that general purpose, as well as allowing non-Belgian entries of similar intent.

Entry Instructions: The entrant **must** specify the name of the commercial beer, specifications (vital statistics) for the beer, and either a brief sensory description or a list of ingredients used in making the beer. *Without this information, judges who are unfamiliar with the beer will have no basis for comparison.*

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the declared beer.

Commercial Examples: Orval, La Chouffe

Tags: specialty-beer

34B. Mixed-Style Beer

This style is intended for beers in **Existing Styles** (previously-defined Classic Style beers or Specialty-Type Beers) that are either:

- A combination of Existing Styles that are not defined previously in the guidelines, including combination of Specialty-Type Beers not otherwise allowable elsewhere.
- A variation of an Existing Style using a non-traditional method or process (e.g., dry-hopping, 'eis'-ing, stein bier) for that style.
- A variation of an Existing Style using a non-traditional ingredient (e.g., yeast with a non-traditional profile, hops with a different character than described in the Base Style).
- Out-of-spec variations of an Existing Style (e.g., 'imperial' versions, 'session' versions, overly-sweet versions, etc.).

This style is intended for beers that can't be entered in previously-listed styles first, including (and especially) the declared Base Style of beer. However, if the unusual method, process, or ingredient results in a beer that now fits within another defined style, the beer should be entered there. Note that some styles already allow for different strengths (e.g., IPAs, Saisons), so those variations should be entered as the appropriate Base Style.

Bear in mind that a poorly-made, faulted beer should not be used to define a new style. Drinkability should always be maintained, while allowing for creative new concepts.

Overall Impression: Based on the declared Base Styles, methods, and ingredients. As with all Specialty-Type Beers, the resulting combination of beer styles needs to be harmonious and balanced, and be pleasant to drink.

Aroma: Based on the declared Base Styles.

Appearance: Based on the declared Base Styles.

Flavor: Based on the declared Base Styles.

Mouthfeel: Based on the declared Base Styles.

Comments: See preamble for intent.

Entry Instructions: The entrant **must** specify the Base Style or Styles being used, and any special ingredients, processes, or variations involved. The entrant **may** provide an additional description of the sensory profile of the beer or the vital statistics of the resulting beer.

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the declared beer.

Commercial Examples: Birrificio Italiano Tipopils, Firestone Walker Pivo Pils, Jack's Abby Hopponius Union, Ommegang Helles Superior

Tags: specialty-beer

34C. Experimental Beer

This is explicitly a catch-all category for any beer that does not fit into an Existing Style description. No beer is ever "out of style" in this style, unless it can be entered in another beer style first. This is the last resort for any beer entered into a competition. With the broad definition for previous styles, this style should be rarely used.

Overall Impression: Varies, but should be a unique experience.

Aroma: Varies.

Appearance: Varies.

Flavor: Varies.

Mouthfeel: Varies.

Comments: This style cannot represent a well-known commercial beer (otherwise it would be a Commercial Specialty Beer) and cannot fit into any other existing Specialty-Type Beer style (including those within this major category).

Entry Instructions: The entrant **must** specify the special nature of the experimental beer, including the special ingredients or processes that make it not fit elsewhere in the guidelines. The entrant **must** provide vital statistics for the beer, **and** either a brief sensory description or a list of ingredients used in making the beer. *Without this information, judges will have no basis for evaluation.*

Vital Statistics: OG, FG, IBUs, SRM, and ABV will vary depending on the declared beer.

Commercial Examples: None

Tags: specialty-beer

APPENDIX A: ALTERNATE CATEGORIZATIONS

Many have requested alternate categorizations of the BJCP styles since the guidelines may be used for purposes other than homebrew competitions (e.g., education, research, study). To better meet these needs, additional systems have been developed. The alternate categories are listed, along with the current 2021 Styles from the main guidelines.

1. Styles Sorted Using 2008 Categories (Strict)

This system uses the 2008 categories with the equivalent beer styles from the 2021 guidelines. Any 2021 style not present in the 2008 guidelines is categorized as a Category 23 Specialty Beer.

- (1)1. Light Lager
 - A. 1A. American Light Lager

APPENDIX B: LOCAL STYLES

This appendix contains style descriptions submitted by local BJCP judges or brewers within a single country or region for emerging styles of local importance that may or may not have wider popularity. The BJCP has reviewed, edited, and verified the style descriptions, which may be used by anyone, not just as an appellation in the local area (although judges outside the area may not be familiar with them). These local styles are part of the Style Guidelines, and are not provisional styles.

Argentine Styles

X1. Dorada Pampeana

Suggested style placement: Category 18 (Pale American Beer)

En sus comienzos los cerveceros caseros argentinos estaban muy limitados: no existían los extractos, sólo malta pilsen y lúpulo Cascade. Sólo levaduras secas, comúnmente Nottingham, Windsor o Safale. Con estos ingredientes, los cerveceros argentinos desarrollaron una versión específica de la Blond Ale, llamada Dorada Pampeana.

Impresión general: Fácilmente bebible, accesible, con orientación a malta.

Aroma: aroma dulce maltoso ligero a moderado. Es aceptable el aroma frutal bajo a moderado. Debe tener aroma a lúpulo bajo a medio. Sin diacetilo.

Aspecto: color amarillo claro a dorado profundo. Claro a brillante. Espuma baja a medio con buena retención.

Sabor: Dulzor maltoso inicial suave. Típicamente ausentes los flavors a caramelo. Flavor a lúpulo ligero a moderado (usualmente Cascade), pero no debería ser agresivo. Amargor bajo a moderado, pero el balance tiende a la malta. Final medio-seco o algo dulce. Sin diacetilo.

Sensación en boca: Cuerpo mediano ligero a medio. Carbonatación media a alta. Sensación suave sin amargor áspero o astringencia.

Comentarios: es dificultoso lograr el balance.

Historia: los primeros cerveceros argentinos sólo accedían a malta pilsen y lúpulo cascade y con ellos desarrollaron esta variante de Blond Ale.

Ingredientes: usualmente solo malta pálida o pilsen, aunque puede incluir bajas proporciones de malta caramelizadas. Comúnmente lúpulo Cascade. Levaduras americanas limpias, británicas levemente frutadas o Kölsch, usualmente acondicionada en frío.

Estadísticas vitales:
D.I.: 1.042 – 1.054
IBUs: 15 – 22
SRM: 3 – 5
D.F.: 1.009 – 1.013
G.A.: 4,3° – 5,5°

Pampas Golden Ale

Overall impression: Easy drinkability, malt-oriented.

Aroma: Light to moderate sweet malty aroma. Low to moderate fruity aroma is acceptable. May have a low to medium hop aroma. No diacetyl.

Appearance: Light yellow to deep gold color. Clear to brilliant. Low to medium head with good retention.

Flavor: Initial soft malty sweetness. Caramel flavors typically are absent. Mild to moderate hop flavor (usually Cascade), but should not be aggressive. Low to moderate hop bitterness, the balance is normally towards the malt. Half-dry to something sweet finish. No diacetyl.

Mouthfeel: Medium-light to medium body. Medium to high carbonation. Smooth without harsh bitterness or astringency.

Comments: It is difficult to achieve the balance.

History: At the beginning Argentine homebrewers were very limited: there weren't extract, they could use only pils malt, Cascade hops and dry yeast, commonly Nottingham, Windsor or Safale. With these ingredients, Argentine brewers developed a specific version of Blond Ale, named *Dorada Pampeana*.

Ingredients: Usually only pale or pils malt, although may include low rates of caramelized malt. Commonly Cascade hops. Clean American yeast, slightly fruity British or Kölsch, usually packaged in cold.

Vital Statistics:
IBU: 15 – 22
SRM: 3 – 5
OG: 1.042 – 1.054
FG: 1.009 – 1.013
ABV: 4.3% – 5.5%

X2. IPA Argenta

Suggested style placement: Category 21 (IPA)

IPA Especialidad: IPA ARGENTA

Impresión general: Una Pale Ale Argentina decididamente amarga y lupulada, refrescante y moderadamente fuerte. La clave del estilo está en la tomabilidad sin asperezas y con un buen balance.

Aroma: Intenso aroma a lúpulo con carácter floral y cítrico, derivado de los lúpulos argentinos. Muchas versiones tienen dry-hopping, lo que otorga un carácter a hierba adicional, aunque esto no es requerido. Puede hallarse dulzura límpida a malta e inclusive algo de caramelo, pero con menor tenor que en las Ipas inglesas. Un carácter frutal leve de los ésteres es aceptable, al igual que toques fenólicos producto de la fermentación del trigo, que nunca deben ser dominantes y solo deben agregar complejidad. De todos modos, el carácter relativamente neutro de la fermentación es lo más usual. Puede notarse algo de alcohol en las versiones más fuertes. Sin DMS. El diacetil es un demérito importante en esta cerveza ya que apaga el lúpulo, por lo que nunca debe estar presente.

Aspecto: El color varía de dorado medio a cobre rojizo medio. Algunas versiones pueden tener un tinte anaranjado. Debe ser clara, aunque las versiones con dry-hopping o que contienen trigo no malteado pueden tener una leve turbiedad. Buena espuma persistente.

Sabor: A lúpulo medio a alto, debiendo reflejar el carácter del lúpulo argentino, con aspectos prominentemente cítricos a pomelo rosado y cáscara de mandarina, que deben dominar. Puede tener también tonos florales como flores de azhar o también herbal y/o resinoso aunque es menos habitual y solo debe agregar complejidad. Amargor medio a medio alto, soportado por una maltosidad limpia que proporciona un balance adecuado.

Sabor a malta bajo a medio, límpido, aunque son aceptables bajos niveles acaramelados o picantes por el uso de trigo, sea o no malteado. Sin diacetil. Un bajo carácter frutal es aceptable, pero no requerido. El amargor debe permanecer en el retrogusto pero nunca debe ser áspero. Finish medio seco a seco y refrescante. Puede percibirse algún sabor a alcohol en las versiones más fuertes.

Sensación en boca: cuerpo medio liviano a medio, suave, sin astringencias derivadas del lúpulo, aunque la moderada a

moderada alta carbonatación puede combinarse con el trigo para dar una sensación seca, aún en presencia de la dulzura de la malta. Suave tibieza a alcohol en las versiones más fuertes (no en todas). Menor cuerpo que la IPA inglesa, y más seca que la IPA Americana.

Historia: La versión Argentina del histórico estilo inglés desarrollada en el marco de una serie de encuentros de la Asociación Civil Somos Cerveceros en 2013, donde se fueron definiendo sus características distintivas. Se diferencia de la IPA Americana por agregado de trigo a la receta de granos y el uso de lúpulos Argentinos que tienen características únicas de sabor y aroma. Se busca que las características cítricas del lúpulo Argentino armonicen con el trigo, como sucede en la Witbier. El agregado de bajas cantidades de trigo puede recordar al grist de la Kölsch, donde también hay un frutado producto de la fermentación.

Ingredientes: malta pálida (bien modificada y disponible para maceración simple) y una cantidad de trigo como complemento que no debe superar el 15%; El trigo puede ser malteado o sin maltear. EN el caso de agregar caramelos, deben ser limitados y preferentemente utilizando trigo caramelo. Los lúpulos Argentinos como el Cascade, Mapuche y Nugget son los usuales, aunque puede tener Spalt, Victoria y Bullion para agregar complejidad. Levadura americana que da un perfil límpido o levemente frutal. El agua varía de blanda a moderadamente sulfatada.

Estadísticas vitales: DO: 1055 – 1065
IBU: 35 – 60 DF: 1008 – 1015
SRM: 6 – 15 GA 5.0 – 6.5%.

Ejemplos comerciales: Antares Ipa Argenta, Kerze Ipa Argenta.

Argentine IPA

Overall Impression: A decidedly hoppy and bitter, refreshing and moderately strong Argentine pale ale. The clue is drinkability without harshness and best balance.

Aroma: Intense hop aroma with a citrusy and floral character derived from Argentine hops. Some clean malty sweetness and caramel may be found in the background, but should be at a lower level than in English examples. Fruitness from esters and light phenols from fermentation of wheat may also be detected in some versions, although a neutral fermentation character is usual. Some alcohol may be noted in stronger versions. No DMS. The diacetyl is a high demerit because it can cover aroma hops, and never should be present.

Appearance: Color ranges from medium gold to medium reddish copper; some versions can have an orange-ish tint. Should be clear, although unfiltered dry-hopped versions or with unmalted wheat may be little hazy. Good head stand, persistent.

Flavor: Hop flavor is medium to high, and should reflect an Argentine hop character: citrusy, grapefruit and tangerine peel must be dominant. May have some floral character like orange blossoms, or herbal and resinous, although it is less common and should only add complexity. Medium-high to very high hop bitterness, although the malt backbone will support the strong hop character and provide the best balance. Malt flavor should be low to medium, and is generally clean and malty sweet although some caramel or spicy flavors from wheat, malted or unmalted, are acceptable at low levels. No diacetyl. Low fruitness is acceptable but not required. The bitterness may linger into the aftertaste but should not be harsh. Medium-dry to dry finish, refreshing. Some clean alcohol flavor can be noted in stronger versions.

Mouthfeel: Medium-light to medium-bodied mouthfeel without hop-derived astringency, although moderate to medium-high carbonation can combine with wheat to render an overall dry sensation in the presence of malt sweetness. Some smooth alcohol warming can and should be sensed in stronger (but not all) versions. Body is generally less than in English counterparts, and more dry than American counterparts.

History: An Argentine version of the historical English style, developed in 2013 from Somos Cerveceros Association meetings, when its distinctive characteristics were defined. Different from an American IPA in that it is brewed with wheat and using Argentine hops, with its unique flavor and aroma characteristic. Based on a citrus (from Argentine hop) and wheat pairing idea, like in a Witbier. Low amounts of wheat are similar to a Kölsch grist, as is some fruitness from fermentation.

Ingredients: Pale ale malt (well-modified and suitable for single-temperature infusion mashing) with up to 15% wheat, either malted or unmalted; Caramel malts should be limited and preferably be caramel wheat. Argentine hops like Cascade, Mapuche and Nugget are typical, although Spalt, Victoria or Bullion may be used to add complexity; American yeast that can give a clean or slightly fruity profile. Water character varies from soft to moderately sulfate.

Vital Statistics: OG: 1.055 – 1.065
IBU: 35 – 60 FG: 1.008 – 1.015
SRM: 6 – 15 ABV: 5.0 – 6.5%.

Commercial Examples: Antares Ipa Argenta, Kerze Ipa Argenta.

Italian Styles

X3. Italian Grape Ale

For uses outside Italy, see 29D Grape Ale.

Aroma: Aromatic characteristics of a particular grape have to be noticeable but do should not overpower the other aromas. The grape character should be pleasant and should not have defects such as oxidation. Malt character is usually restrained and should not exhibit a roasty, stout like, profile. Hop aroma (floral, earthy) can range from medium-low to absent. Some examples can have a low wild character described as barnyard, earthy, goaty but should not be as intense as in a lambic/fruit lambic. No diacetyl.

Appearance: Color can range from light gold to copper but some examples can be brown. Reddish/ruby color is usually due to the use of red grape varieties. White to reddish head with generally a medium low retention. Clarity is generally good but some cloudiness may be present.

Flavor: As with aroma, grape character (must or wine-like) must be present and may range from medium-low to medium-high intensity. Varieties of grape can contribute differently on the flavor profile: in general stone/tropical fruit flavors (peach, pear, apricot, pineapple) can come from white grapes and red fruit flavors (e.g., cherry, strawberry) from red grape varieties. Further fruity character of fermentative origin is also common. Different kinds of special malts can be used but should be supportive and balanced, not so prominent as to overshadow the base beer. Strong roasted and/or chocolate character is inappropriate. Light sour notes, due to the use of grape, are common and may help to improve the drinkability but should not be prominent as in Sour ale/Lambic or similar. Oak flavors,

along with some barnyard, earthy, goaty notes can be present but should not be predominant. Bitterness and hop flavors are low. Diacetyl is absent

Mouthfeel: Medium-high carbonation improves the perception of aroma. Body is generally from low to medium and some acidity can contribute to increase the perception of dryness. Strong examples can show some warming but without being hot or solventy.

Overall Impression: A sometimes refreshing, sometimes more complex Italian ale characterized by different varieties of grapes.

History: Initially brewed at Birrificio Montegioco and Birrificio Barley in 2006-2007, Italian Grape Ale (IGA) is now produced by many Italian craft breweries. It's also becoming popular in US and other wine countries. It represents a communion between beer and wine promoted to the large local availability of different varieties of grapes across the country. They can be an expression of territory, biodiversity and creativity of the brewer. Normally seen as a specialty beer in the range of products of the brewery.

Breweries call "Wild IGA" or "Sour IGA" any wild/sour version of the style.

Ingredients: Pils in most of cases or pale base malt with some special malts (if any). Grape content can represent up to 40% of whole grist. Grape or grape must, sometimes extensively boiled before use, can be used at different stages: during boiling or more commonly during primary/secondary fermentation. Yeast can show a neutral character (more common) or a fruity/spicy profile (English and Belgian strains). Wine yeast can be used also in conjunction with other yeasts. Continental hop varieties, mainly German or English, are used in low quantities in order not to excessively characterize the beer.

Style Comparison: Similar to Fruit Beer but evolved as a standalone style due to the abundance of grapes varieties in Italy.

Vital Statistics:	OG: 1.045 – 1.100
IBUs: 6 – 30	FG: 1.005 – 1.015
SRM: 4 – 25	ABV: 4.5 – 12%

Commercial Examples: Montegioco Open Mind, Birrificio Barley BB5-10, Birrificio del Forte Il Tralcio, Viess Beer al mosto di gewurtztraminer, CRAK IGA Cabernet, Birrificio Apuano Ninkasi, Luppolaço Mons Rubus

Tags: Specialty-beer, Fruit

Brazilian Styles

X4. Catharina Sour

Estilo sugerido para inscrição: Categoria 29 (Fruit Beer)

Impressão Geral: Uma cerveja refrescante de trigo, ácida e com frutas, possui um caráter de frutas vivida e uma acidez láctica limpa. A graduação alcoólica contida, o corpo leve, a carbonatação elevada, e amargor abaixo da percepção fazem com que a fruta fresca seja o destaque. A fruta não precisa ser de caráter tropical, mas normalmente apresenta este perfil.

Aroma: Médio à alto caráter de fruta, reconhecível e identificável de forma imediata. Uma acidez láctica limpa de intensidade baixa à média que complementa a fruta. Malte tipicamente neutro, mas pode apresentar notas de pão e grãos em caráter de apoio. Fermentação limpa sem caráter de

levedura selvagem ou *funky*. Sem aroma de lúpulo. Sem álcool agressivo. Especiarias, ervas e vegetais devem complementar a fruta se estiverem presentes.

Aparência: Coloração tipicamente bastante clara – amarela-palha até dourada. Espuma branca de média à alta formação e média à boa retenção. A coloração da espuma e da cerveja podem ser alteradas e ficar com a coloração da fruta. Claridade pode ser bastante límpida até turva. Efervescente.

Sabor: Sabor de fruta fresca dominante em intensidade média à alta, com uma acidez láctica limpa de intensidade baixa à média-alta de forma complementar mas notável. A fruta deve ter um caráter fresco, sem parecer cozida, parecida com geléia ou artificial. O malte é normalmente ausente, se presente pode ter um caráter baixo de grãos ou pão, mas não deve nunca competir com a fruta ou a acidez. Amargor do lúpulo abaixo do limiar de percepção. Final seco com um retrogosto limpo, ácido e frutado. Sem sabor de lúpulo, notas acéticas, diacetil, ou sabores funk oriundos de Brett. Especiarias, ervas e vegetais são opcionais e em caráter complementar à fruta.

Sensação de Boca: Corpo baixo à médio-baixo. Carbonatação média à alta. Sem aquecimento alcoólico. Acidez baixa à média-baixa sem ser agressivamente ácida ou adstringente.

Comentários: Melhor servida fresca. A acidez pode fazer com que a cerveja pareça mais seca e com um corpo menor do que a gravidade final sugere. Uma Berliner Weisse com adição de frutas deve ser inscrita na categoria 29A Fruit Beer.

História: Os exemplos individuais existiam com nomes diferentes anteriormente no Brasil, mas o estilo se tornou popular com esse nome depois que foi definido formalmente em 2015 durante uma reunião entre cervejeiros profissionais e caseiros em Santa Catarina. Utilizando ingredientes locais adequados para um clima quente, o estilo se espalhou para outros estados do Brasil e além, sendo um estilo muito popular na América do Sul – tanto em competições comerciais como caseiras.

Ingredientes: Malte Pilsen com malte de trigo ou trigo não maltado. A técnica de *Kettle Sour* com o uso de Lacto é a mais comum de ser utilizada, seguida por uma fermentação com uma levedura ale neutra. A fruta é tipicamente adicionada nos estágios finais da fermentação. Frutas da estação frescas, comumente tropicais. Especiarias, ervas e vegetais são opcionais, mas devem sempre estar em caráter de apoio e elevar a percepção da fruta.

Comparações de Estilo: Como uma Berliner Weisse mais forte, mas com fruta fresca e sem Brett. Menos ácida do que Lambic e Gueuze e sem o caráter da Brett. A partir do guia de estilos 2021, cervejas semelhantes podem ser inscritas no estilo mais amplo 28C Wild Specialty Beer Style.

Estatísticas "Vitais":	OG: 1.039 – 1.048
IBU: 2 – 8	FG: 1.004 – 1.012
SRM: 2 – 6	ABV: 4.0 – 5.5%

Exemplos Comerciais: Armada Daenerys, Blumenau Catharina Sour Pêssego, Istepô Goiabêra, Itajahy Catharina Araçá Sour, Liffey Coroa Real, UNIKA Tangerina Clemenules

Marcações: estilo-craft, fruta, ácida, cerveja-specialty

Catharina Sour

Suggested style placement: Category 29 (Fruit Beer)

Overall Impression: A refreshing fruited sour wheat beer with a vibrant fruit character and a clean lactic acidity. The restrained alcohol, light body, elevated carbonation, and lack of perceived bitterness allows the fresh fruit to be highlighted. The fruit is often, but not always, tropical in nature.

Aroma: Medium to high fruit character, immediately noticeable and recognizable. A clean lactic sourness, low to medium, supports the fruit. Neutral malt typically, but can have low grainy or bready notes in support. Clean fermentation profile with no wild or funky yeast character. No hop aroma. No sharp alcohol. Optional Spices, Herbs, and Vegetables should support the fruit if present.

Appearance: Color is often fairly pale – straw to gold. Medium to high white head with fair to good retention. The color of the beer and head can also take on the color of the fruit. Clarity can be quite clear to hazy. Effervescent.

Flavor: Medium to high fresh fruit flavor dominates, with a supportive but noticeable, low to medium-high clean lactic sourness. The fruit should have a fresh character, not seeming cooked, jam-like, or artificial. The malt is often absent, but if present can have a low grainy or bready quality that never competes with the fruit or sourness. Hop bitterness below sensory threshold. Dry finish with a clean, tart, and fruity aftertaste. No hop flavor, acetic notes, diacetyl, or funky Brett flavors. Spices, Herbs, and Vegetables are optional in support of the fruit.

Mouthfeel: Low to medium-low body. Medium to high carbonation. No alcohol warmth. Low to medium-high acidity without being aggressively sour or astringent.

Comments: Best consumed fresh. The acidity may make the beer seem drier and lighter in body than the final gravity might suggest. Berliner Weisse beers with fruit should be entered as 29A Fruit Beer.

History: Individual examples existed under different names previously in Brazil, but the style became popular under this name after it was formally defined in 2015 during a workshop between craft brewers and homebrewers in the Brazilian state of Santa Catarina. Featuring local ingredients well-suited to the warm climate, the style has spread to other states within Brazil and elsewhere, and is a very popular modern style in South America – both commercially and in homebrew competitions.

Ingredients: Pilsner malt with wheat malt or unmalted wheat. Kettle sour technique with Lacto is most common, followed by fermentation with a neutral ale yeast. Fruit typically added late in fermentation. Fresh seasonal fruit, often tropical. Spices, Herbs, and Vegetables are optional, but always should support and enhance the fruit presentation.

Style Comparison: Like a stronger Berliner Weisse, but with fresh fruit and no Brett. Less sour than Lambic and Gueuze, and without Brett character. As of the 2021 Guidelines, similar beer could be entered in the broader 28C Wild Specialty Beer style.

Vital Statistics:
IBU: 2 – 8
SRM: 2 – 6
OG: 1.039 – 1.048
FG: 1.004 – 1.012
ABV: 4.0 – 5.5%

Commercial Examples: Armada Daenerys, Blumenau Catharina Sour Pêssego, Istepô Goiabêra, Itajahy Catharina Araçá Sour, Liffey Coroa Real, UNIKA Tangerina Clemenules

New Zealand Styles

X5. New Zealand Pilsner

Suggested style placement: Category 12 (Pale Commonwealth Beer)

Overall Impression: A pale, dry, golden-colored, cleanly-fermented beer showcasing the characteristic tropical, citrusy, fruity, grassy New Zealand-type hops. Medium body, soft mouthfeel, and smooth palate and finish, with a neutral to bready malt base provide the support for this very drinkable, refreshing, hop-forward beer.

Aroma: Medium to high hop aroma reflective of modern New World hop varieties, often showcasing tropical fruit, citrus (lime, white grapefruit), gooseberry, honeydew melon, with a light green bell pepper or grassy aspect. Medium-low to medium malt in support, with a neutral to bready-crackery quality. Very low DMS acceptable but not required. Neutral, clean yeast character, optionally with a very light sulfury quality. The hop character should be most prominent in the balance, but some malt character must be evident.

Appearance: Straw to deep gold in color, but most examples are yellow-gold. Generally quite clear to brilliant clarity; haziness is a fault. Creamy, long-lasting white head.

Flavor: Medium to high hop bitterness, cleanly bitter not harsh, most prominent in the balance and lasting into the aftertaste. Medium to high hop flavor with similar characteristics as the aroma (tropical, citrus, gooseberry, melon, grass). Medium to medium-low malt flavor, grainy-sweet, bready, or crackery. Clean fermentation profile (fermentation esters are a fault). Dry to off-dry with a clean, smooth finish and bitter but not harsh aftertaste. The malt may suggest an impression of sweetness but the beer should not be literally sweet. The finish may be dry but not seem crisp or biting. The balance should always be bitter, but the malt flavor must be noticeable.

Mouthfeel: Medium to medium-light body. Medium to medium-high carbonation. Smoothness is the most prominent impression. Never harsh nor astringent.

Comments: The hop aromatics often have a similar quality as many New Zealand Sauvignon Blanc wines, with tropical fruit, grassy, melon, and lime aromatics. Often brewed as a hybrid style in New Zealand using a neutral ale yeast at cool temperatures. Limiting the sulfur content of the finished product is important since it can clash with the hop character.

History: Largely defined by the original created at Emerson's Brewery in the mid-1990s, New Zealand Pilsner has expanded in character as the varieties of New Zealand hops have expanded in number and popularity.

Ingredients: New Zealand hop varieties, such as Motueka, Riwake, Nelson Sauvignon, often with Pacific Jade for bittering. Other new world varieties from Australia or the US may be used, if they have similar characteristics. Pale base malts, Pilsner or pale types, perhaps with a small percentage of wheat malt. Fairly low-mineral water, typically with more chloride than sulfate. Clean lager yeast or very neutral ale yeast.

Style Comparison: Compared to a German Pils, not as crisp and dry in the finish with a softer, maltier presentation and a fuller body. Compared to a Czech Premium Pale Lager, less malt complexity, a cleaner fermentation. Similar in balance to a Kolsch or British Golden Ale, but with a hoppier aroma. Compared to any of these German styles, showcasing New Zealand hop varieties with tropical, citrusy, fruity, grassy

characteristics, often with a white wine-like character. Should not be as hoppy or bitter in balance as an IPA.

Vital Statistics: OG: 1.044 – 1.056
IBU: 25 – 45 FG: 1.009 – 1.014
SRM: 2 – 6 ABV: 4.5 – 5.8%.

Commercial Examples: Croucher New Zealand Pilsner, Emerson's Pilsner, Liberty Halo Pilsner, Panhead Port Road Pilsner, Sawmill Pilsner, Tuatara Mot Eureka
